Monograph 5

Black Box Data from Accident Vehicles: Methods of Retrieval, Translation, and Interpretation

Table of Contents

Chapter 1	Introduction
Chapter 2	A Review of the Nomenclature, Mathematical and Geometric Conventions Used in Describing Crash Event Data
Chapter 3	Examples and Exercises in Data Translation
Chapter 3.1	Creating a Linear Data List from Hex Data Blocks
Chapter 3.2	Inductively Deriving a SLOT Factor from Component Specifications, Translating Acceleration Data and Interpreting that Data into Cumulative Velocity Loss (Delta V)
Chapter 3.3	Deductively Identifying EEPROM Parameters from Published Data and Deductively Deriving the Required SLOT Factors that Translate Raw EEPROM Data into Cumulative Velocity Loss (Delta V)
Chapter 3.4	Data Import Methods, Mapping Templates and Introduction to Data Mining
Chapter 3.5	Multi-Byte and Bitmap Translation as Applied to Diagnostic Trouble Codes (DTCs)
Chapter 3.6	Analysis of EDR Accelerometer Running Data to Determine Acceleration Impingement Vectors
Chapter 3.7	Analysis of ABS Wheel Speed Sensor Running Data to Determine Detected Pulse Rate Consistency
Chapter 3.8	Using Hardcopy Crash Test Data to Characterize Specific EDR Performance versus EDR Family Performance
Chapter 4	EDR Data Considerations with/respect/to Evidentiary Reliability and Interrogation Procedures
