

Manual 45 -- Radiation Curing of Coatings

Table of Contents

Chapter 1: Radiation Curing

- Introduction
- What is radiation curing and why is it used?
- Radiation
- Simplified Classic to Modern Light/Radiation/Energy/Theory
- Magnitude of Ultraviolet and Visible Radiation
- Photon Production
- Electrons
- References

Chapter 2: Curing Equipment

- Electron Beams
- Ultraviolet Radiation Systems
- Xenon Lamps
- Hybrid Xenon/Mercury Lamps
- Excimer Radiation
- Visible Radiation, Light
- References

Chapter 3: Free-Radical Photoinitiators and Initiation Mechanism

- Introduction
- Photoinitiators
- Free Radical Photoinitiators
 1. Homolytic Fragmentation Type
 2. Hydrogen Abstraction Type
 3. Photosensitizers
 4. Oxygen Inhibition
- Visible Radiation Photoinitiators
- References

Chapter 4: Cationic Photoinitiators and Initiation Mechanism

- Introduction
- Onium Salts, General
- Diazonium Salts, Lewis Acids
- Iodonium and Sulfonium Salts, Bronsted Acids
- Organometallic Compounds
- Photosensitizer
- References

Chapter 5: Free Radical Initiated Polymerization System

- Free Radical Systems
 1. Unsaturated Polyester/Styrene Systems
 2. Polyene/Thiol Compositions

3. Acrylate Compositions
 - a. Monofunctional Acrylates
 - b. Polyfunctional Acrylates
 - c. Oligomeric Acrylates-- Epoxy, Urethane, Oils
 1. Acrylated Epoxides or Epoxy Acrylates
 2. Urethane Acrylates
 3. Esterified Polyol Acrylates
 4. Acrylated Oils
 - Shrinkage
 - References

Chapter 6: Cationic Polymerization Systems

- Cationic Cycloaliphatic Epoxide Systems
- Oils
- Mechanism of Polymerization
 1. Polyols
 2. Water, Humidity, and Temperature Effects
 3. Effect of Added Thermal Energy
 4. Electron Beams and Epoxide Cure/P>
 5. Pigmentation
 - Formulation
 - References

Chapter 7: Vinyl Ethers

- Introduction
- Free Radical Polymerization
- Cationic Polymerization
- Hybrid Polymerizations
- Oligomeric Vinyl Ethers
 1. Urethane Vinyl Ethers
 2. Ester Vinyl Ethers
 3. Vinyl Ether-Silicone Blends
 4. Vinyl Ether-Epoxide BlendsvReferences

Chapter 8: Ultraviolet Radiation Curable Powder Coatings

- Introduction
- Polymer Systems
- Wood Substrates
- Metal Substrates
- Fiberboard
- Summary
- ReferencesChapter

Chapter 9: Dual Cure Mechanisms

- Free Radical/Cationic Systems
- Radiation/Thermal Cures

- Radiation/Moisture-Cure Urethane Cures
- Radiation/Epoxide Cures
- Radiation/Radiation Cures
- Radiation/Air Drying Cures
- References

Chapter 10: Adhesives

- Introduction
- Pressure Sensitive Adhesives
- Release or Anti-adhesion Coatings
- Other Adhesives
- References

Chapter 11: Miscellaneous

- Antifoaming Agents
- Expanding Monomers
- Gloss Control
- Inorganic Glasses for Pigmented and Thick Section Cures
- Odor
- Scratch, Slip, and Abrasion Resistance
- Silane Coupling Agents
- Surfactants
- Textured Coatings
- Thick Section Curing
- Water-Based Systems
- Weathering
- References

Chapter 12: Safety and Health Considerations

- References

Chapter 13: End Uses

- Automotive
- Electrical/Electronic
- Magnetic Media
- Optical Components and Materials
- Printing Inks and Graphic Arts
- Stereolithography
- Wood Coatings
- General
- The Future
- References
