

Introduction

ASTM DESIGNATION: C 94/C 94M-04 STANDARD SPECIFICATION FOR READY-MIXED CONCRETE

This is the official number and title for the ASTM specification for ready-mixed concrete. Portions of the designation remain constant, and other parts are always subject to change. An analysis of the parts of the alphanumeric identification for the “Specification for Ready-Mixed Concrete” entails four segments:

C 94 includes the group designation C (that comes from the 19 ASTM committees currently grouped under the "C" designation, of which committee C09 is one of them).

ASTM committee C09 is responsible for this ready-mixed concrete specification. The permanent number 94 was assigned in numerical sequence from all of the "C" committee standards when first developed.

C 94M means this specification is a combined standard that includes metric (SI) values as well as inch-pound values.

04 indicates the last year (2004) that alterations were made to this specification. ^ε1 superscript (ε) following the year designation would indicate that an editorial change has been made later than the substantive changes of 2004.

Footnotes on the title page are self-explanatory.¹

¹ This specification is under the jurisdiction of ASTM Committee C 09 on Concrete and Concrete Aggregates and is the direct responsibility of Subcommittee C 09.40 on Ready-Mixed Concrete. Current edition approved Feb. 1, 2004. Published March 2004. Originally approved in 1933. Last previous edition approved in 2003 as C 94/C 94-03^ε1.
