

Manual 59

A Comprehensive Review of Lubricant Chemistry, Technology, Selection, and Design

TABLE OF CONTENTS

Preface

Chapter 1 — Lubrication Fundamentals

Functions of a Lubricant

Lubricants Market

Friction and Lubrication

Friction

Lubrication

Viscosity and Wear

Viscosity

Wear

Types of Lubricants

Lubricant Selection and Specifications

Lubricant Selection Criteria

Lubricant Classifications

Lubricant Composition

Chapter 2 — Mineral Base Oils

Petroleum Composition

Oil Field and Refinery Chemicals

Petroleum Refining

Refinery Processes

Refinery Process Chemicals

Lubricant Base Stocks

Comparison Between Naphthenic and Paraffinic Base Oils

Mineral Base Oil Manufacture

Hydrocarbon Analysis

Base Oil Properties

Oxidation Properties

Effects of Sulfur And Nitrogen Compounds

Other Properties

Gas to Liquid Technology

Chapter 3 — Synthetic and Biological (Natural) Base Stocks

Synthetic Base Stocks

Synthetic Hydrocarbon (SHC) Polymers

Carboxylate Esters

Poly(Alkylene Glycols)

Other Synthetic Base Stocks

Petroleum Base Stocks Versus Synthetic Base Fluids

Biological (Natural) Base Stocks

Melting Point/Pour Point

Oxidative Stability

Manufacture and Processing

Composition of Natural Oils and Structural Modifications

Chapter 4 — Lubricant Additives

Desirable Lubricant Properties

Criteria for Suitable Base Stocks

Performance Additives

Stabilizers/Deposit Control Agents

Oxidation Inhibitors

Dispersants

Detergents

Film-Forming Agents

- Emulsifiers and Demulsifiers
- Polymeric Additives
- Other Additives
- Multifunctional Nature of Additives
- Environmental Impact of Additives
- The Introduction of a New Additive
- The Approval Process

Chapter 5 — Combustion Engine Lubricants

- Types of Engines And Mode Of Their Operation
- Lubricant Specifications and Classifications
 - Trends Impacting the New Performance Standards
 - U.S. Standards
 - European Standards
 - Japanese Standards
 - Indian Standards
 - Engine Oil Classification Based On End-Use
 - Lubricant-Related Causes of Engine Malfunction
 - Rating of Engine Parts
 - Formulating Engine Oils
 - Fuel Economy
 - Emissions Control
 - Extended Service Intervals (Extended Oil Drains)
 - Formulations

Chapter 6 — Emissions in an Internal Combustion Engine

- Exhaust Emissions of Concern
 - Unburned Hydrocarbons (HC)
 - Carbon Monoxide (CO)
 - Nitrogen Oxides (NO_x)
 - Ground Level Ozone
 - Sulfur Dioxide
 - Aldehydes
 - Particulate Matter (PM)
 - Odor
- General Engine Performance Considerations
- Emissions Standards
 - U. S. Emissions Standards
 - Emissions Standards — European Union
- Gasoline Engine Emissions Control
 - Gasoline Properties Versus Emissions
 - Formulated Gasoline
 - Reformulated Gasolines (RFGs)
 - Effect of Engine Design and Operating Variables On Emissions
- Diesel Engine Emissions Control
 - Diesel Combustion
 - Diesel Fuel Properties
 - PuriNOx™ Technology
 - Diesel Engine Design and Operating Variables
 - Emissions Control Via After-Treatment
 - Emissions Control Via Engine Design Changes
- Fuel Additives
 - Deposit Formation
 - Deposit Control Additives/Cleanliness Agents
 - Fluidizers
 - Anti-Icing Agents
 - Octane Improvers
 - Lubricity Agents
 - Cetane Improvers (Diesel Ignition Improvers)
 - Combustion Modifiers/Smoke Suppressants
 - Low-Temperature Operability Additives
 - Flow Improvers/Wax Modifiers
 - Foam Inhibitors
 - Corrosion Inhibitors
 - Demulsifiers
 - Biocides

- Antistatic Agents
- Drag Reducers
- Dyes and Markers
- Oxidation Inhibitors/Stabilizers
- Metal Deactivators

Chapter 7 — Hydraulic and Transmission Fluids

Hydraulic Fluids

- Tractor Hydraulic Fluids
- Industrial Hydraulic Fluids
- Types of Hydraulic Fluids
- Formulating a Hydraulic Fluid
- Condition-Monitoring Of Hydraulic Fluids

Transmission Fluids

- Automatic Transmission Fluids
- Power Transmission Fluids
- Transmission Fluid Composition and Testing
- Continuously Variable Transmissions (CVTS)
- Lubricants for The Continuously Variable Transmissions (CVTS)
- Formulation Examples
- Miscellaneous Hydraulic Fluids

Chapter 8 — Gear Lubricants

Gear Types

Gear Metallurgy

Types of Gear Damage

- Effect of Design and Operation-Related Factors
- Effect of Lubrication-Related Factors

Gear Oil Formulation

- Base Fluids
- Additives

Lubricant Selection

Gear Lubricant Tests

- Physical Tests
- Analytical Tests
- Performance Tests

Formulation Examples

Chapter 9 — Miscellaneous Industrial Lubricants

Types of Industrial Oils

- Turbine Lubricants
- Performance Specifications
- Desirable Turbine Oil Properties
- Turbine Oil Formulation
- Compressor and Refrigeration Oils
- Miscellaneous Industrial Applications
- Potential Industrial Uses of Synthetic Fluids
- Examples of Industrial Fluids Formulations

Chapter 10 — Lubricating Greases

Lubricating Grease Versus Liquid Lubricant

History of Lubricating Grease Development

Lubricating Grease Classification

Lubricating Grease Market

Grease Composition

- Soap-Thickened Lubricating Greases
- Non-Soap Greases

Grease Chemistry

- Base Fluids
- Additives

Grease Manufacture

- Batch Production
- Continuous Production
- Finishing
- Incorporation of Additives

- Desirable Grease Properties
 - Consistency
 - Consistency Stability
 - Penetration
 - Rheological Properties
 - Lubricating Grease Structure
 - Flow Properties
 - Thermal Stability (Heat Resistance)
 - Storage Stability
 - Oxidation Stability
 - Sensitivity to Water
 - Corrosion Protection
 - Load Carrying Tests
- Grease Classifications
- Characteristics of Modern Greases
- Inter-Grease Compatibility
- Applications Involving Lubricating Greases
 - Grease Selection
 - Bearing Lubrication
 - Gear Lubrication
 - Automotive Aftermarket
 - Primary Metals – Steel Mills
 - Food Processing
 - Textiles
- Grease Storage
- Handling and Disposal of Used/Waste Greases
- Environmentally Compatible Greases
- Grease Testing Requirements
 - Flow Properties
 - Heat Resistance
 - Oxidation Stability
 - Extreme Pressure and Wear
 - Corrosion
 - Seal Compatibility
 - Stability
 - Water Tolerance Tests
 - Bench Performance Tests
 - Grease Compatibility
 - NLGI Certification Mark
 - Grease Analysis
- Specialty Greases
 - Synthetic Lubricating Greases and Their Coding
 - Multiple Use Greases
 - Multi-Purpose Grease
 - Track Roller Lubricants
 - Mineral Oils Mixed With Solids
 - Heavy Asphaltic-Type Oils Blended With Lighter Oils
 - Extreme-Pressure Greases
 - Roll Neck Greases
- Application and Industry Trends

Chapter 11 — Metalworking And Machining Fluids

- Lubrication
- Viscosity
- Metalworking Fluid Classification
 - Classification Based on Base Fluid
 - Classification Based on End-Use
- Fluid Composition
 - Base Fluid
 - Additives
- Metalworking Fluid Formulations and Testing

Chapter 12 — Lubricant Testing

Introduction of a New Additive or a Product

The Approval Process

Physical and Analytical Tests

Mechanical or Tribological Tests

In-Service Lubricant Analysis

Full Scale Testing

Performance Requirements of Finished Lubricants

Elements of a Quality Test

Chapter 13 — Lubricants and The Environment

Lubricant Deterioration in Service

Used Oil — Environmental Considerations

Lubricant Conservation

Used Oil Recycling

Oil Re-Conditioning

Lubricants and The Environment

Environmental Compatibility

Need For Standardized Testing

Biodegradability

Toxicity

Environmentally Acceptable Lubricants

Disposal Issues

Appendix

Terms Related To Lubricants, Lubrication, and Tribology

Table A.1: European Lubricants Coding - Iso 6743

Table A.2: Viscosity Conversion Table — CST Versus SSU

Table A.3: Si Base Units

Table A.4: Examples of Si Derived Units

Table A.5: Si Derived Units with Special Names And Symbols

Table A.7: Si Prefixes

Table A.8: Non-Si Units Accepted For Use with the Si Units

Table A.9: Commonly Used Metric System Units and Symbols

Table A.10: The Most Commonly Used Metric Prefixes

Table A.11: Unit Conversion Factors
