

STP 1501

AUTOMOTIVE LUBRICANT TESTING and ADDITIVE DEVELOPMENT

Table of Contents

A Review of Engine Oil Oxidation Bench Tests and Their Application in the Screening of New Antioxidant Systems for Low Phosphorus Engine Oils—*V. Gatto, W. Moehle, E Schneller, T. Burris, T. Cobb, and M. Featherstone*

Viscometric Temperature Sensitivity of Engine Lubricants at Low Temperature and Moderately High Shear Conditions—*K. O. Henderson and C. P. Maggi*

No/Low SAP and Alternative Engine Oil Development and Testing—*M. Woydt*

Synergistic Tribological Performances of Borate Additive in Lubricants—*J.-Q. Hu, Y.-Q. Hu, G.-L. Liu, and Y.-H. Ma*

The “Practice Relevant Pitting Test”—A New Improved Test Method to Evaluate the Influence of Lubricants on the Pitting Load Capacity of Case Carburized Gears—*B.-R. Hohn, P. Oster, T. Radev, and T. Tobie*

ROBO—A Bench Procedure to Replace Sequence IIIGA Engine Test—*B. G. Kinker, R. Romaszewski, and P. A. Palmer*

Mechanochemical Additive-Assisted Reconditioning Effects and Mechanism on Worm Ferrous Surfaces—*J. Yuansheng, Y. He, and L. Shenghua*

Study of the ZDDP Antiwear Tribofilm Formed on the DLC Coating Using AFM and XPS Techniques—*T. Haque, A. Morina, A. Neville, R. Kapadia, and S. Arrowsmith*

Validation of Oxidative Stability of Factory Fill and Alternative Engine Oils Using the Iron Catalyzed Oxidation—*E. Fitamen, L. Tiquet, and M. Woydt*

Additive and Base Oil Effects in Automatic Particle Counters—*P. W. Michael, T. S. Wanke, and M. A. McCambridge*

Design of Functionalized PAMA Viscosity Modifiers to Reduce Friction and Wear in Lubricating Oils—*M. Muller, J. Fan, and H. Spikes*

Surface Characterization Techniques in Wear of Materials—*K. Miyoshi, K. Ishibashi, and M. Suzuki*
