

STP 1520

Pesticide Formulations and Delivery Systems: 29th Volume

Table of Contents

Adjuvant Technology

The influence of tank mix additives while making low volume aerial fungicide applications— *Wolf, R.E*

Glyphosate Weed Control Enhancement with Ammonium Sulfate and Commercial Water Conditioning Agents—
Peterson, D.

The Effect of Adjuvants, Pesticide Formulation and Spray Nozzle Tips on Spray Droplet Size— *Klein, R.*

Imazapyr absorption and translocation in Northern red oak and red maple as affected by herbicide formulation and the adjuvant methylated seed oil—*Bernards, M.L.*

Formulation Technology

Selection of sequestering agents having affinity for calcium ion for stabilization of the EC formulations—*Kozuki, Y.*

A predictive solubility tool for pesticide Emulsifiable Concentrate formulations— *Kozuki, Y.*

Stabilization of Suspension Concentrate Formulations via Specialized Double-comb Polymers—*Hazen, J.L.*

Effect of Processing Shear Time on EW Formulations—*Costello, L.*

Antifoaming and Defoaming in Agricultural Tank Mixes: Revisiting, Revising and Reviving a Method—*O'Connell, T.J.*

Drift Reduction Technology

Evaluation of a Proposed Drift Reduction Technology High-Speed Wind Tunnel Testing Protocol—*Hoffmann, W.*

Development and Testing of a Laboratory Spray Table Methodology to Bioassay Aerial Spray Drift—*Fritz, B.K*

Evaluation of the EPA Drift Reduction Technology (DRT) Low-Speed Wind Tunnel Protocol— *Fritz, B.K.*

Multiple metal cations as spray deposit tracers and evaluation of the AGDISP ground boom spray drift model—
Zabkiewicz, J.
