

## ASTM International Technical Committee E28 on Mechanical Testing

**Established:** 1969

**Number of Members:** 450

**Number of Standards:** 55

**Global Participation:** 30 Countries represented

**The standards are available in:** Volume 3.01 in the *Annual Book of ASTM Standards*

**Meetings:** E28 meets twice each year, in May and November

**SCOPE:** Mechanical Testing is the determination of the properties of the mechanical states of a material that are associated with elastic and inelastic reactions to force or that involve relationships between stress and strain.

The Scope of the Committee shall be the promotion of knowledge and advancement in methods of mechanical testing by: formulating, maintaining, and promoting superior quality standard test methods, practices, and guides which involve the measurement of mechanical properties or quantities from which such properties may be derived; encouraging research and development of mechanical test methods; standardizing the terminology used in or relating to mechanical test methods and apparatus; conducting round-robin testing where appropriate to validate procedures and methods.

### **TECHNICAL SUBCOMMITTEES:**

- E28.01 Calibration of Mechanical Testing Machines and Apparatus
- E28.02 Ductility and Flexure Testing
- E28.04 Uniaxial Testing
- E28.06 Indentation Hardness Testing
- E28.07 Impact Testing
- E28.13 Residual Stress Measurement
- E28.15 Automated Testing
- E28.91 Terminology
- E28.94 US TAG ISO/TC 164 on Mechanical Testing

### **KEY DOCUMENTS:**

- E8/E8M Standard Test Methods for Tension Testing of Metallic Materials
- E10 Standard Test Method for Brinell Hardness of Metallic Materials
- E18 Standard Test Methods for Rockwell Hardness of Metallic Materials
- E23 Standard Test Methods for Notched Bar Impact Testing of Metallic Materials
