The More Things Change . . .

Change is eternal, change is on-going, and to quote Bob Dylan, "the times they are a-changing." Well, the editorial staff of JCTR is also a-changing. Dr. T. Kevin O'Brien has stepped down as Co-editor due to an increase in work load and responsibilities at the Army Structures Directorate. Kevin has agreed to stay on as a member of the Editorial Board. Thanks, Kevin, for your great help in setting up the current article review procedure and watching over that process the past four years.

We have added a new member to the Editorial Board in Dr. Chuck Bakis of Penn State. Chuck has been an active article reviewer for the Journal for several years. Chuck's current research areas include composite materials for infrastructures. Welcome aboard, Chuck.

The last change is my address. After 15 fruitful, challenging, and fun (mostly) years with NASA Langley Research Center, I have accepted a position as Professor in the School of Materials Science and Engineering at Georgia Tech. I am looking forward to new challenges in the areas of composites research and educating young eager minds to the ways of the world. Dr. John Masters and I will continue to team to steer the Journal through the days ahead.

Let me take this opportunity to thank all the paper contributors, reviewers, and subscribers for making the Journal very successful and recognized for its excellence in the areas of testing and modeling of composite materials.

Respectfully,

W. Steven Johnson
Editor in Chief
