FOREWORD

The papers in this publication were presented at a symposium on the Application of Advanced and Nuclear Physics to Testing Materials which was held Feb. 3 and 4, 1964 during the Winter Meeting of the American Society for Testing and Materials in Philadelphia, Pa. This symposium was organized as a result of a request from the International Union of Testing and Research Laboratories for Materials and Structures, Paris, France, to develop a meeting on modern techniques of nuclear physics in the evaluation of materials. The partnership of an ASTM-RILEM symposium was a natural one since both organizations have common roots: The International Association for Testing of Materials. ASTM was incorporated in 1902 from the American branch of I.A.T.M. (the branch was formed in 1898); RILEM was organized in 1947 to reestablish international relations among laboratories for materials and structures, since I.A.T.M. did not survive World War II.

The co-chairman for RILEM was E. Amstutz, Director of the Federal Laboratory for Testing Materials, Dubendorf, Switzerland. The co-chairman for ASTM was A. G. H. Dietz, Professor of Building Technology, Massachusetts Institute of Technology, Cambridge, Mass.

Presiding officers for the four sessions were W. J. McGonnagle of the Southwest Research Institute Laboratories, Alexander Gobus of the Philips Electronic Instruments, W. E. Havercroft of the National Research Council of Canada, and S. A. Wenk of the Varian Associates.

Welcoming addresses were given by R. L'Hermite, Secrétaire Général, RILEM, Paris, France, and I. Vernon Williams, President, ASTM, and Head of the Metallurgical Engineering Dept., Bell Telephone Laboratories, Inc., Murray Hill, N. J.

The RILEM papers presented in this symposium also appear in French in the RILEM Quarterly.

NOTE—The Society is not responsible, as a body, for the statements
and opinions advanced in this publication.

CONTENTS

	PAGE
Introduction—A. G. H. Dietz	1
Applications of Centimetric Radio Waves in Nondestructive Testing—A. R. Boot and A. Watson	3
Discussion	24
X-ray Spectrochemical Analysis of Materials: Cement and Dental Alloys—B. L. Bean and B. W. Mulligan	25
Discussion	45
The Use of Neutron Diffraction in the Study of the Properties of Matter—E. Legrand Discussion	46
Discussion	61
Nondestructive Estimation of Cement Content of Hardened Concrete—E. R. Yaltkaya, B. V. Entüstün, S. Urkan, H. S. Sentürk, and K. Köksal	62
Discussion	69
Impact of Nuclear Technology on Highway Engineering—P. L. Blackwell	70
Discussion	79
A Radiometric Method for Determination of Moisture in Brick Walls—B. Ros- sinski, T. Przedeci, and Z. Stachowicz	80
Influences of Modern Physics on the Properties of Wood and Their Evaluation— R. L. Youngs	90
Discussion	101
Applications of Modern Physics to Materials Tests—R. Lachaud and J. Paquet ...	102
Discussion	113
The Physical Properties of Rocks and Probable Applications—J. E. Udd	114
Discussion	124
Recent Techniques for Insulation in Space Environment—J. S. Light	127
Discussion	134

RELATED ASTM PUBLICATIONS

Radiation Effects on Materials, STP 233 (1958)

Radioisotopes in Metals Analysis and Testing, STP 261 (1959)

Applied Radiation and Radioisotopes Test Methods, STP 268 (1959)

THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
