

Index

NOTE—The word *silica* has been deleted from many entries where it is clear that it should be understood—for example, *particles* rather than *silica particles*.

A

Adenosine triphosphate assay, 50
 Administrative norms for human exposure, 207–209
 Adsorption
 Binding forces in, 11–12
 Effect of surface charge and molecular weight, 16
 Ionic, 17–18
 Mechanisms of, 11–18
 Polymers, 13–14, 16
 Proteins, 19
 Quaternary ammonium ions, 17–19, 23
 Aerosil effect on immune response in animals, 85
 Aktisil MM properties, 175
 Allograft acceptance, influence of particles, 84
 Aluminum, effect on surface charge, 10
 Aluminum fluoride processing, effect on animals of particles, 203–206
 Aluminum smelter dust
 Effect of particle concentration in PAM cultures, 53
 Fibrogenic potential, 57–58
 Alveolar proteinosis, 114–115, 173

Amorphous particles

 Chemical composition of, 126, 204–205
 Clinical chemistry, 131
 Defined, 4
 Effect of concentration on release of lysosomal enzymes from macrophages, 71–73
 Effects on animals, 145
 Human exposure to, 118–119
 In rat lungs following dust exposure, 136
 Monkey lungs, 125–128
 Particle size distribution of, 125
 Pulmonary function in monkeys, 128–131, 135
 Rat and guinea pig lungs, 127–128
 Relative hazards from, 218–219
 Animal tests, complications in, 87
 Arc-process particles
 Descriptions of, 200, 204–205, 210
 Effects on animals, 203, 206, 207
 Humans, 187, 201–203
 Asbestos, toxicity of, 70–74
 Autoimmune response in silicosis, 86–87

B

Bronchoalveolar cells in lavage fluid, 101–104, 109

C

- Cardiac pressure changes in rabbits following dust exposure, 162
- Cell membrane disruption, 19, 20
- Chronic bronchitis incidence in population, 196
- Coal mine dust compared with synthetic dusts, 183-184
- Complement system, effects of quartz dust on, 85
- Copper smelter dust
 - Effect of particle concentration in PAM cultures, 51-52, 53
 - Trace metals in, 56
- Crocidolite asbestos, effect of milling on toxicity, 67

D

- Dawsonite, and mesothelioma, 68, 75-76
- Diatomite particles
 - Cristobalite in flux-calcined, 200, 207, 210
 - Pneumoconiosis in humans exposed to, 186, 201
 - Solubility of, 36, 37
- Dustiness, determination, 139

E

- Emphysema in animals, 172-173
- Epidemiology
 - Limitations of, 138
 - Worker turnover effects, 197-198
- Exposure, human, to amorphous silica, 118-119
- Exposure index, in epidemiology, 187-188, 196

F

- Fibroblast, effect of quartz on, 63-64
- Fibrogenesis
 - In various sites, 65
 - Mechanism of, 64, 68
- Fibrogenic factor from macrophages, 62-64, 65
- Fibrogenicity, comparison of various particles, 181
- Fibrosis, patterns of, following treatment with quartz, 113
- Fly ash, metal oxide coated, 50
- Fume particles
 - Crystallinity in, 27
 - Effect of concentration on release of lysosomal enzymes from macrophage cultures, 71, 72
 - Effects on monkey lungs, 126-127
 - Significance of properties in fibrogenesis, 134-136
- Fused quartz particles
 - Crystallinity in, 26, 203
 - Effects on animals, 203
- Fusion index of macrophages, 96

G

- Gel particles, manufacture and properties, 76-78
- Gel solubility, rate of, 37
- β -Glucuronidase, release from macrophages treated with silica dusts, 71-73

H

- Hematite toxicity, 67
- HI-SIL, physical and chemical properties, 147, 186

Hydrogen bonding
 Effect of
 Counter ions, 15
 pH on, in adsorption, 14-16
 In adsorption processes, 13-16
 Hydrophobic bonding of the siloxane surface, 16-17
 Hydroxyproline
 From quartz-treated macrophage cultures, 63
 In monkey lungs, 136

I

Immune response
 Effect of particles on, in animals, 83-85
 Macrophage role in, 82-84
 Immunological reactions in fibrogenesis, 88-89, 216
 Infections, influence of particles on, 84, 92-93
 Inflammatory response
 And chemotaxis, 111-112
 Fibrogenesis, 94-95
 Following intratracheal injection of quartz particles, 108-113
 Influence of pre-infection on, 114, 115
In vitro testing, predictions from, 50-53, 67-68, 214
In vivo testing, 214-216

K

King scale of fibrosis, 184

L

Lactic acid dehydrogenase (LDH) release from macrophages

 treated with silica dusts, 71-73
 Lipids influence on macrophage activity, 65, 66
 Lung response reversal in humans, 170
 Lymph node weights of rats treated with quartz particles, 175-176, 177

M

Macrophage
 Adherence following treatment with quartz, 102, 110
 Cultures, 49-50, 63, 68-69, 70, 97
 Factor, release by cytolysis, 19-20, 62-66
 Functions, 49, 83, 111-112
 Motility, following treatment with quartz, 110, 112-113
 Recruitment, 64-65
 Role of in fibrogenesis, 19-20, 62-66, 88, 89, 216-217
 Magnetite, toxicity of, 67, 70
 Mesothelioma, 68, 75-76
 Min-U-Sil, particle size distribution, 95
 Mortality of animals exposed to precipitated particles, 152-153

N

Neoplasias
 In animals exposed to precipitated particles, 163-165
 Mesothelioma, 68, 75-76
 Neutrophils in inflammatory response, 109, 111-112

O

- Occupational exposure limits, 207-209
- Omentum, effects of quartz on, 45-46, 175-177
- Organ weights, of rats treated with quartz particles, 175-177

P

- Particle deposition in lungs, species differences, 140-141, 143
- Particle solubility
 - And particle size, 22
 - Rate of, 31-34, 36-39, 41-42, 43, 47
 - Surface characteristics affecting, 30-34
- Particle surface
 - Freshly cleaved, 5, 26
 - Importance in biological activity, 3-4, 30, 216, 217-218
 - Ionic charge on, 10-11, 12, 15, 17-18
 - Monomolecular layers on, 32
 - Silanol densities, 9, 23-24
 - Siloxane hydration, 24-26
- Particle toxicity
 - Comparison of industrial dust samples, 51-57
 - Comparisons, 51-57, 159, 160
 - Complications in animal testing of, 87-88
 - Effect of calcium on, 21-22, 169
 - In vivo* studies of industrial samples, 56-57
 - Particle concentration on, 52, 53
 - Size on, 21, 22, 27-29, 50-51, 74, 79-80
 - Testing, variables affecting, 80-81
- Particles
 - Classification of
 - By surface structure, 9-10

- Synthetic silicas by manufacturing process, 4
- Identification of, 116-117, 139-140
- Relative fibrogenicity of, 211-212
- Size of airborne, 120, 151-152, 196-197
- Peritoneal lesions, regression of, 182
- Phagocytic index, of macrophages, 98
- Poly vinylpyridine-*N*-oxide, effect on macrophages, 64
- Precipitated particles
 - Chemical and physical properties of, 147, 186
 - Correlation of physical, chemical properties and biological activity, 168-169
 - Effect of
 - Concentration on release of lysosomal enzymes from macrophages, 71, 73
 - Inhalation on lung weight of animals, 153-157
 - On human pulmonary functions, 188-191
 - Electron microscopic photograph of, 148
 - Interrelations among exposure to, smoking, and symptoms, 188, 193
 - Pathology of animals exposed to, 157-160
 - Physiological changes in rabbits exposed to, 161-163
 - Predicted human response to inhalation of, 171
 - Respiratory symptoms with exposure to, 188, 192
 - Roentgenographic changes in human lungs exposed to, 188, 191
 - Synthesis of, 6

Promonocytes, in macrophage recruitment, 64-65

Pulmonary

Clearance

Effect of particle size on, 81

Effect on fibrogenesis, 78-79

Compliance, value of in epidemiology, 194-195

Edema, fulminating, 22

Function

Of monkeys exposed to amorphous silica dust, 128-131, 135

Relation to clinical findings, 195

Lesions, regression of, 142

Q

Quartz

DQ12, effect of concentration in macrophage cultures, 71

Particles

Coating by silicic acid, 38-40

Effects of

Intratracheal injection on guinea pigs, 99-108

Intraperitoneal injection on rats, 175-180

On complement system, 85

Surface on biological activity, 3

Fibroblasts, 63-64

Macrophage carbohydrate metabolism changes after exposure to, 43-44

Preparation of surface for testing, 37-40

Size by scanning EM, 38

Quartz solubility

Effect of

Heating on, 40-41, 43

Rate of, 30-43

Surface coating on, 41, 42

Quartz toxicity, 70, 71

Effects of surface coating on, 43-47, 178-182

To rabbit PAM, 43-45

Effect of surface coating on, 45

To rats, intraperitoneal, 45-47

Variability of, 27

Quaternary ammonium ions, adsorption, 17-19, 23

R

Respiratory tract

Effect on pulmonary deposition, 78-79

S

Silanol groups

Adsorption of water, 5

Dehydration of, 7-8

On surface of precipitated silica, 5-9

Silene, chemical and physical properties, 186

Silica, content of animal lungs during dust exposure, 155-157, 159, 161

Silicon, in rat lungs, 131-134, 136

Silicosis

Autoimmune theory of, 86-89

Clinical manifestations, 142

Description of pathology, 169-171

Immune response in, 86, 111

Inflammatory response, 111-112

Lymphocyte function in, 86

Scheme of pathogenesis, 88-89

Similarities in experimental and clinical observations, 88

Silitin Z86, properties of, 175

Siloxane surface

By dehydration of silanols, 7-8

Hydration of, 8-9

Smoking

And dust exposure, effects on symptoms, 188, 193

Correlation with respiratory symptoms, 194

Sols, effect of alumino-silicate ions on coagulation of, 17-18

Solubility rate, of various particles, 182, 184

Spleen, effects of coated and cleaned intraperitoneal quartz on, 45-46

Surface coating of particles

Effect on

Fibrogenesis, 43-47, 178-182

Rabbit PAM, 43-45

Toxicity, 23, 43-47, 178-182

Synthetic silicas, classification by manufacturing process, 4

T

Titanium dioxide

Effect on macrophage cultures, 63, 67

Toxicity of, 70

Tridymite

Intravenous effect of on immune response in animals, 85

Tuberculosis in animals, effect of precipitated particle exposure on, 153, 165-168

Tumor immunity, in animals, effect of particles on, 84, 163-165

W

Worker turnover, effect on epidemiological studies, 197-198

X

X-ray diffraction

Comparison of precipitated with quartz particles, 149

Of synthetic particles, 4
