

## Subject Index

316L stainless steel, 50, 194, 211  
 macrophage cells and corrosion, 137

### A

AISI 630, 13  
 Alloy, 176  
 Anodic polarization, 107  
 Arthroplasty, 222  
 ASTM A 262E, 176  
 ASTM F 138, 168  
 ASTM F 746, 176  
 ASTM F 1314, 3  
 ASTM F 1586, 3, 39, 168  
 ASTM F 1801, 194  
 ASTM F 1875, 235  
 ASTM F 2129, 176  
 ASTM F 2180, 50  
 ASTM G 5, 107  
 ASTM G 71, 107  
 Austenitic stainless steel, 119, 168, 194

### B

Bending properties, 93  
 Biocompatibility, 119, 137  
 BioDur 108, 107, 154, 194  
 BioDur 316LS, 176  
 Biomechanics, 222  
 Bone plate, fatigue, 93  
 Bone resorption, 222  
 Bone screw, 93  
 Breakdown potentials, 168, 176

### C

Cable systems, 50  
 Cell culture, 137  
 Cement fixation, 249  
 Chromium, 262  
 CoCr alloy, 211, 235  
 Compatibility, MRI, 82  
 Coronary stent, 28, 61, 176  
 Corrosion, 107, 176  
   crevice, 176, 222, 262  
   fatigue, 154, 194  
   fretting, 222, 235, 262  
   galvanic, 107

intergranular, 176  
 macrophage cells and, 137  
 pitting, 3, 176  
 properties, 39, 72  
 resistance, 13, 119, 176  
 wear-induced, 211

Crevice corrosion, 176, 222, 262  
 Cutting, 13  
 Cyclic fatigue, 119  
 Cytokines, 262  
 Cytotoxicity, 119

### D

Dilation-balloon expandable coronary  
 stents, 176

### E

Electrochemical studies, 168  
 Electron microscopy, 222  
 Elongation, 39

### F

Fatigue, 119, 194  
   resistance, 93  
   testing, 154, 194  
 Femoral head, 235  
 Femoral stem, 39, 249  
 Foreign-body reaction, 222  
 Forged hip stems, 39  
 Fretting corrosion, 222, 235, 262

### G

Galvanic corrosion, 107

### H

Hardness, 13, 39  
 High cycle fatigue tests, 93  
 High-nitrogen stainless steel, 39, 72, 119,  
 211, 235  
 Hip prosthesis, 222  
 Hip stems, 39, 235

### I

Implant materials, 3, 194, 211  
 Implant surface, 249

Inclusions, 72

Intergranular corrosion, 176

Intergranular crack initiation, 93

ISO 5832-9, 39

## L

Low-nickel stainless steel, 93, 107  
notch sensitivity and stress  
corrosion, 154

## M

Macrophage cells, stainless steel  
corrosion and, 137

Macrophages, 222

Magnetic resonance imaging, 82

Martensitic steel, 13

Mechanical properties, 3, 39, 72

Medical instruments, 13

Metal ions, 262

Metals, 222

Microstructure, 3, 39, 50, 72

Modularity, 262

## N

New PHACOMP, 28

Nickel-free stainless steel, 119

Nitrogen alloyed steel, 13

Nonmetallic inclusions, 3, 50

Notch sensitivity, 154

## O

Orthopedic implants, 168

Osteolysis, 262

## P

P2000, 119

Particle size, 222

Particulate debris, 222, 262

Pitting corrosion, 3, 176

Platinum, 176

Platinum-enhanced radiopaque stainless  
steel, 28, 61, 176

Polymethylmethacrylate, 222

Potentiodynamic polarization, 176

## R

Radiopacity, 28, 176

Repassivation, 211

Ringers solution, 176

## S

Safety, MRI, 82

Sandvik Bioline High-N, 3

Sendzimir mill, 61

Serum proteins, 262

Sliding wear, 211

Stem-cement interface, wear, 222

Stress corrosion cracking, 154

Surface analysis, 137

Surgical implants, 50

Systemic dissemination, 262

## T

Tapered stem, 249

Taper interface, 235

Tensile strength, 39

Titanium alloy, 211, 235

Total hip replacement, 222, 249

## U

UNS S31683 alloys, 28, 61, 176

## V

Vacuum arc remelting, 61

Vacuum induction melting, 61

Vickers hardness, 39

## W

Wear, mechanism, 222

Wear-induced corrosion, 211

Wear resistance, 13

Wire, 50

## X

XM 16, 13

X-rays, 176

## Y

Yield strength, 39
