Foreword

The Symposium on Stress Corrosion Testing was presented in four sessions during the 69th Annual Meeting of the Society, in Atlantic City, N. J., 26 June–1 July, 1966. The symposium was sponsored by Committee G-1 on Corrosion of Metals. The symposium chairman was H. Lee Craig, Jr., Reynolds Metals Co. Presiding at the four sessions were M. A. Streicher, E. I. du Pont de Nemours & Co., Inc.; M. G. Fontana, The Ohio State University; G. J. Danek, Jr., U. S. Naval Marine Engineering Laboratory; and W. F. Gerhold, National Bureau of Standards.

Contents

Introduction	1
Stress Corrosion Testing Methods	3
Influence of Stress and Temperature on Short-Transverse Stress Corrosion Cracking of an Al-4.2Zn-2.5Mg Alloy—W. J. HELFRICH	21
A Comparison of Three Precracked Specimens for Evaluating the Susceptibility of High-Strength Steel to Stress Corrosion Cracking—C. D. BEACHEM AND B. F. BROWN	31
Application of an Accelerated Stress Corrosion Test to Alloy Development—E. E. DENHARD, JR., AND R. R. GAUGH	41
Discussion	50
A Rapid Stress Corrosion Test for Aluminum-Magnesium Alloys—H. L. CRAIG, JR., AND H. B. ROMANS	51
Discussion	65
Influence of Environment on Crack Propagation Characteristics of High-Strength Aluminum Alloys—J. H. MULHERIN	66
Discussion	81
Stress Corrosion Cracking of High-Strength Bolting—C. S. LIN, J. J. LAURILLIARD, AND A. C. HOOD	84
Discussion	98
Stress Corrosion of High-Strength Steel Alloys—Environmental Factors—A. GALLACCIO AND M. A. PELENSKY	99
Stress Corrosion of Magnesium Alloys—Environmental Factors—M. A. PELENSKY AND A. GALLACCIO	107
Discussion	115
Resistance of Ferritic Stainless Steels to Stress Corrosion Cracking—A. P. BOND, J. D. MARSHALL, AND H. J. DUNDAS	116
Discussion	125
Some Techniques Used in the Study of Stress Corrosion Cracking—H. L. LOGAN	127
Discussion	142
A Proposed Mechanism for the Stress Corrosion Fracture of a Copper-Beryllium Alloy—W. D. SYLWESTROWICZ	145
A Quantitative Stress Corrosion Test for Al-Zn-Mg Alloy Plate—H. ROSENTHAL AND H. R. PRITCHARD	165
Stress Corrosion Test Environments and Test Durations—H. B. ROMANS	182
Reactions Contributing to the Formation of Susceptible Paths for Stress Corrosion Cracking—D. A. VAUGHAN AND D. I. PHALEN	209
Discussion	227
Critical Species in Stress Corrosion Phenomena—E. N. PUGH AND A. R. C. WESTWOOD	228
Circulating Autoclave System for Stress Corrosion Cracking Studies—R. W. STAEHLE	248
Stress Corrosion Cracking Rates of a Nickel-Brass Alloy Under Applied Potential—NANCY MCKINNEY AND H. W. HERMANCE	274

Discussion	291
Reporting and Evaluating Stress Corrosion Data—D. O. SPROWLS	292
Evaluation of Various Techniques for Stress Corrosion Testing Welded Aluminum Alloys—M. B. SHUMAKER, R. A. KELSEY, D. O. SPROWLS, AND J. G. WILLIAMSON	317
Stress Corrosion Testing of 7079-T6 Aluminum Alloy in Various Environments—B. W. LIFKA AND D. O. SPROWLS	342
Environmental Factors Affecting the Stress Corrosion Cracking Be- havior of an Aluminum-Zinc-Magnesium Alloy—H. B. ROMANS AND H. L. CRAIG, JR.	363
Discussion	379

THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
