The appearance of the code at the bottom of the first page of each article in this volume indicates SAE's consent that copies of an article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per article copy fee through the Copyright Clearance Center, Inc., Operations Center, P. O. Box 765, Schenectady, NY 12301 for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.

Articles published prior to 1978 in similar SAE collective works may also be copied at a per article fee of \$2.50 under the above stated conditions.

To obtain quantity reprint rates, permission to reprint an article, or permission to use copyrighted SAE publications in other works, contact the SAE Publications Division.

FOREWORD

The present collection of papers on the subject of the Relationship Between Engine Oil Viscosity and Engine Performance is Part IV of a series of symposia on this subject which have been sponsored by the Society of Automotive Engineers, Inc. and the American Society for Testing and Materials. Several different facets of the complex relationship between this major source of the world's mechanical power—the engine, and the engine's sole protection against immediate and catastrophic breakdown—the engine oil, have been studied, presented, and discussed in the previous symposia. In this, the Fourth Symposium, the authors: 1) look at the effect of viscosity on oil supply to the engine at low temperatures and low shear (W. Wiemann and W. J. Bartz); 2) present high-shear studies of the viscous properties of engine oils in the laboratory (F. R. Banks, S. Kulik, and W. C. Pike; N. van Os, A. Bos, D. van Namen, and J. de Rooij); 3) apply our present level of technical understanding to results from engine studies (J. du Parquet and A. Godet; M. L. McMillan, R. C. Rosenberg and C. K. Murphy); and 4) question the role of viscosity in engine fuel economy (P. J. Ghirla and R. K. Smith). Finally, in a review of a major colloquium on the subject of the viscometry of multigrade oils held late in 1977, W. J. Bartz summarizes its technical impact.

It is obvious that the subject is not exhausted. Preparations are already underway for a Fifth Symposium to be held in late February 1979 and papers are already being offered. Hopefully, the Fifth Symposium will equal the technical understanding offered by the authors of the papers of this present volume which as the reader will soon determine, is considerable.

The co-organizers of this Fourth Symposium on the Relationship Between Engine Oil Viscosity and Performance wish to gratefully acknowledge the keen insights and helpful suggestions of a number of reviewers of the original manuscripts of these papers. While they must remain anonymous, their efforts were indispensable.

Co-Organizers: T. W. Selby
R. M. Stewart
N. Kendall

TABLE OF CONTENTS

Investigations to Characterize the Low-Temperature-Fluidity of Polymer-Containing Engine Oils, W. Wiemann and W. J. Bartz (780977)	1
Viscosity and Flow Properties of Multigrade Engine Oils—A Review of an International Colloquium, Wilfried J. Bartz (780979)	11
Assessment of Lubrication Conditions in a Big-End Bearing by Temperature Measurements—Correlation with High Shear Viscosity, J. du Parquet and A. Godet (780980)	33
A Simple High Shear Viscometer—Aspects of Correlation with Engine Performance, W. C. Pike, F. R. Banks, and S. Kulik (780981)	47
Viscosity Effects on Engine Wear Under High-Temperature, High-Speed Conditions, M. L. McMillan, R. C. Rosenberg, and C. K. Murphy (780982)	57
Automotive Engine Friction and Fuel Efficiency—Viscous Versus Non-Viscous Effects, Peter J. Ghirla and R. Kennedy Smith (780984)	75
A Study of Lubricating Oil Performance in a Journal Bearing Rig, N. van Os, A. Bos, D. van Namen, and J. C. E. D. de Rooij (780985)	97
