Table of Contents

1. Model and Test Methods for Stability of Fresh Cement Paste
   By Y. Peng, S. Jacobsen, K. De Weerdt, B. Pedersen

2. Mechanisms of Degradation in Rheological Properties due to Pumping and Mixing
   By K. Takahashi and T. A. Bier

3. Measuring Cement paste Rheology Using a Modified Dynamic Shear Rheometer: An Approach to Detect Cement-Admixtures Incompatibilities
   By A. Mukhopadhyay

4. Rheological Evaluation of Slump Flow Curves of Self-Consolidating Concrete from Instrumented Spread Table
   By H. Reinhardt and A. Huss

5. An Empirical Approach to Design Optimized Self-compacting Concrete Mixes
   By R. Dubey and P. Kumar

6. Development of Self-compacting Concrete with Good Shape Stability for Slip Form Construction
   By F. Holzmann, R. Breitenbuecher, and D. Sarmiento

   By M. Liard, L. Oblak, M. Hachim, M. Vachon and D. Lootens

8. Effects of the Characteristics of High Range Water Reducing Agents and the Water-to-Powder Ratio on Rheological and Setting Behavior of Self-consolidating Concrete
   By W. Schmidt, H. J. H. Brouwers, H-C. Kuehne, and B. Meng

9. Effects of Nanomaterials on the Hydration Kinetics and Rheological Behavior of Portland Cement Pastes
   By X. Wang, K. Wang, J. Tanesi, and A. Ardani
