

Contents

Preface		xi
Chapter 1	The Foundations of Asbestos Management	1
	What Is Asbestos?	1
	How Does Asbestos Cause Disease?	2
	Asbestos Use and Diseases Worldwide	6
	A Holistic Approach to Asbestos Control	7
	Asbestos Control: An Evolving Field	9
Sidebar 1.1	Reflections on the Johnson Conferences	10
	References	10
Chapter 2	Baseline Surveys for Asbestos-Containing Materials	12
	Baseline Surveys, AHERA Surveys, and OSHA	13
	Planning the Baseline Survey	15
	Defining the Scope of the Survey	16
	Conducting Fieldwork	22
	<i>How Many Samples Should You Collect?</i>	22
	<i>What Doesn't Have to Be Sampled?</i>	24
	<i>Where Do You Take the Samples?</i>	27
	<i>How Do You Take the Samples?</i>	28
	Sampling thermal system insulation	30
	Sampling surfacing materials	35
	Sampling friable miscellaneous materials	37
	Sampling non-friable miscellaneous materials	44
	<i>Summary—Sample Collection</i>	48
	<i>Sample Documentation</i>	48
	Analyzing the Bulk Samples	49
	<i>Polarized Light Microscopy</i>	50
	Beyond PLM	53

	<i>Positive Stop</i>	55
	Preparing a Report	57
Sidebar 2.1	Qualifications	61
Sidebar 2.2	What's Under That Carpet?	61
	References	64
Appendix 2A	Health and Safety for Asbestos Surveys	65
	Respirators and PPE for Asbestos Exposure	65
	References	69
Sidebar 2.3	Inspecting Fire-Damaged Buildings	70
	References	72
Appendix 2B	Signs and Labels for Asbestos-Containing Materials	73
	References	77
Appendix 2C	Asbestos in Vermiculite Loose Fill Insulation	78
	Where Does Vermiculite Come From?	78
	Where Does the Asbestos Come from?	79
	How Is Vermiculite Produced?	80
	Why Is Asbestos-Containing Vermiculite Hazardous?	80
	How Is Vermiculite Sampled and Analyzed for Asbestos?	83
	How Is Asbestos in Vermiculite Regulated?	84
	References	84
Chapter 3	Naturally Occurring Asbestos	86
	Asbestos Minerals	86
	<i>Where Does Asbestos "Occur Naturally" in the United States?</i>	87
	Case Studies of NOA	88
	<i>The Golden State</i>	88
	<i>Virginia NOA: From Fairfax to Lynchburg</i>	92
	<i>DOT Meets NOA in North Carolina</i>	96
	<i>The Last Frontier</i>	97
	Conclusion	99
	References	100
Appendix 3A	Sampling and Analysis of Asbestos in Soil	101
	Applications of Soil Analysis for Asbestos	101
	Limitations of Soil Analysis for Asbestos	101
	Methods Used for Asbestos in Soils	102
	EPA/600/R-93/116	102
	<i>EPA Region 1 Method</i>	103
	<i>CARB Method 435</i>	103
	<i>ASTM D7521 Standard Test Method for</i>	
	<i>Determination of Asbestos in Soil</i>	104
	Examples of Using Soil Methods	106
	<i>Libby Amphibole in Vermiculite-Rich Soils</i>	106
	<i>Soil in Housing Development</i>	107
	References	108
Chapter 4	Assessment of Asbestos-Containing Materials	109
	The AHERA Assessment Protocol	110

	<i>Examples of Using the AHERA Protocol</i>	110
	<i>Overcoming the Limitations of the AHERA Protocol</i>	114
	The ASTM Assessment Protocols	115
	<i>The ASTM Qualitative Assessment Protocol</i>	116
	Current condition	116
	Potential for disturbance	123
	The ASTM Quantitative Assessment Protocol	127
	Other Assessment Methodologies	132
	References	133
Appendix 4A	Exposure Assessments for ACMs	135
	Regulatory Background	135
	Exposure Assessment Tests	137
	Exposure Assessment Sampling Data	137
	Applying Exposure Assessments	140
	Exposure Assessment Updates	141
	Conclusions	142
	References	142
Appendix 4B	Asbestos in Settled Dust	143
	Standards and Regulations for Asbestos in Settled Dust	143
	History of Asbestos in Settled Dust	143
	What Is Settled Dust, and Where Does It Come From?	144
	How Is Settled Dust Sampled?	145
	<i>The Microvac Methods</i>	145
	<i>Wipe Sampling Method</i>	149
	How Are Settled Dust Samples Analyzed?	149
	What Do Settled Dust Results Mean?	150
	<i>Statistical Comparisons of Settled Dust Results</i>	152
	Settled dust samples in school cafeterias	152
	Settled dust samples in power plant building	154
	How Does Settled Dust Become Airborne?	157
	Some Final Reflections	157
	References	158
Chapter 5	Planning the Asbestos Abatement Project	159
	Pre-Construction Surveys	159
	Project Design Surveys	163
	<i>Non-Sampling Considerations</i>	167
	Limits of abatement and phases of work	167
	Negative pressure enclosure	168
	Contractor mobilization area	169
	Decontamination and load-out facilities	169
	Visibility barriers	170
	Electrical power	170
	Essential building services	171
	HVAC systems	172
	Consultant's field office	173

	Inaccessible ACM	173
	Material condition	173
	Abatement Project Design	174
	What is a project design?	175
	Why do a project design?	175
	Is a project design always needed?	175
	Can a project be bid from the baseline survey report?	176
	<i>Abatement Drawings</i>	176
	<i>Abatement Specifications</i>	180
	<i>Bid Solicitation</i>	181
	The bid package	182
	The pre-bid conference	184
	Contractor selection	184
	References	184
Appendix 5A	Abatement Project Contractual Relationships and Responsibilities	185
	The Project Monitor	188
Appendix 5B	Wallboard: More than Joint Compound	191
	Understanding Wallboard Systems	191
	Sampling Wallboard Systems	195
	Composite Sampling and Analysis	200
	Wallboard Sampling Results	202
	Wallboard Removal	202
	References	202
Chapter 6	Abatement Projects—Removal of Asbestos-Containing Materials	203
	The Pre-Construction Meeting	203
	Preparation of Removal Area	205
	<i>Construction of the Enclosure</i>	205
	Critical barriers	205
	Negative pressure enclosures	208
	Protecting surfaces	215
	<i>Decontamination Facilities</i>	221
	<i>Final Preparation Checklist Items</i>	225
	Surveillance During Asbestos Removal	229
	<i>Class I Removal</i>	230
	<i>Class II Removal</i>	234
	Flooring materials	234
	Wallboard removal	238
	Other Project Monitor Duties	240
Sidebar 6.1	Negative Pressure Enclosure Dynamics	240
	References	242
Appendix 6A	Pre-Construction Meeting	243
Appendix 6B	Air Monitoring Before and During Removal	245
	Background Samples	245

Samples During Preparation and Removal	246
<i>Ambient Samples</i>	247
<i>Samples Inside the Enclosure</i>	249
<i>Monitoring Negative Air Machine Exhaust</i>	250
Sampling inside the duct	250
Sampling at the duct exit	251
Sampling in the space receiving the discharged air	252
References	252

Chapter 7	Abatement Projects—Visual Inspections and Clearance	253
	Class I Work	254
	<i>Complete Removal of ACM and Surface Residue</i>	254
	<i>Inspect for Completeness of Removal</i>	256
	<i>Apply Sealer to Substrate or Components</i>	267
	<i>Clean and Remove Plastic from Protected Surfaces</i>	270
	<i>Perform Final Cleaning Inside Enclosure</i>	270
	<i>Inspect for Completeness of Cleanup</i>	272
	<i>Perform Air Sampling and Analysis for Clearance</i>	275
	How many samples are collected?	275
	How are the pumps calibrated?	275
	How do you take the samples?	277
	How long do the pumps run?	280
	How are the samples analyzed?	280
	<i>Dismantle Critical Barriers and Decontamination Facilities</i>	281
	Class II Work	281
	<i>Floor Tile Removal</i>	282
	Complete removal of ACM and surface residue	282
	Inspect for completeness of removal	282
	Apply sealer to substrate	283
	Clean and remove plastic from protected surfaces	283
	Perform final cleaning inside enclosure	283
	Inspect for completeness of cleanup	283
	Perform air sampling and analysis for clearance	284
	Dismantle critical barriers and decontamination facilities	284
	<i>Wallboard Removal</i>	284
	Complete removal of ACM and surface residue	284
	Inspect for completeness of removal	284
	Apply sealer to substrate; perform final cleaning and inspection	285
	Perform air sampling and analysis for clearance	285
	Dismantle critical barriers and decontamination facilities	285
	Encapsulation	285
	Documentation and Certificate of Completion	285

Sidebar 7.1	Unexpected Situations	287
	<i>Conditions Not Anticipated During Project Design</i>	287
	<i>Excessive Deterioration of Site Conditions</i>	287
Sidebar 7.2	The Consequences of Unremoved Material	288
Sidebar 7.3	Clearance Samples—When to Start the Pumps	291
	References	292
Appendix 7A	Encapsulation of ACMs	293
	Definitions	293
	Encapsulation as Abatement	293
	<i>Testing Encapsulants</i>	295
	Cohesion-adhesion testing	295
	Coverage and penetration tests	297
	<i>Encapsulation as Adjunct to Removal</i>	297
	References	299
Appendix 7B	Visual Inspection for O&M	300
	<i>Definitions and Limitations of O&M</i>	300
	<i>Visual Inspection for O&M Activities</i>	301
	<i>Before the Work Begins</i>	301
	<i>During the Work</i>	303
	<i>At the Conclusion of the Work</i>	304
Chapter 8	Asbestos-Cement Products	309
	Production and Uses of Asbestos-Cement	309
	<i>Worldwide Production</i>	309
	<i>Uses of Asbestos-Cement</i>	310
	Some Myths and Facts about Asbestos-Cement	311
	Sampling and Analyzing Asbestos-Cement Products	321
	Assessing Asbestos-Cement Products	321
	Abatement and O&M for Asbestos-Cement Products	321
	Significance and Use: Some Final Thoughts	324
	References	324
Appendix 8A	Inside and Outside an Asbestos-Cement Factory	325
	References	328
	About the Authors	329
