Acknowledgment

Structure and Use of Just-About-Right Scales

Appendixes

A. Graphical Data Display

B. Graphical Scaling

C. Percent Difference from Norm and Percent Difference from Just Right

D. The Mean

E. Mean Direction and Mean Absolute

F. Mean versus Scale Mid-Point

G. Methods for Determining Whether JAR Distributions are Similar among Products [Chi-Square, Cochran-Mantel-Haenszel (CMH), Stuart-Maxwell, McNemar]

H. A Proportional Odds/Hazards Approach to JAR Data

I. Student's *t*-Test—Analysis of Variance of Two Samples

J. Analysis of Variance (ANOVA)

K. Thurstonian Ideal Point Modeling

L. Penalty Analysis or Mean Drop Analysis

M. Using Grand Mean versus JAR Mean to Create Penalties in Penalty Analysis

N. A Regression-Based Approach for Testing Significance of JAR Variable Penalties

O. Bootstrapping Penalty Analysis

P. Opportunity Analysis

Q. PRIMO Analysis

R. Chi-Square

S. Biplots, Correspondence Analysis, and Principal Components Analysis

T. Correlation

U. Regression

V. Preference Mapping from JAR Data Using Tree-Based Regressions

W. Application of JAR Data to Preference Mapping Using Dummy Variables

X. Collecting Intensity and Hedonic Information Separately

Y. Designed Experiments

Z. Ideal Scaling

Bibliography
