Manual 64

Intensive Quenching Systems: Engineering and Design

Table of Contents

Chapter 1
Thermal and Metallurgical Basics of Design of High-Strength Steels—N.I. Kobasko

Chapter 2
Transient Nucleate Boiling and Self-Regulated Thermal Processes—N.I. Kobasko

Chapter 3
Critical Heat Flux Densities and Characteristics of Heat Transfer During Film Boiling—
N.I. Kobasko, M.A. Aronov, J.A. Powell

Chapter 4
Convective Heat Transfer—N.I. Kobasko

Chapter 5
Generalized Equations for Determination of Cooling Time for Bodies of Any Shape During
Quenching—N.I. Kobasko

Chapter 6
Regular Thermal Process and Kondratjev Form Factors—N.I. Kobasko

Chapter 7
Stress State of Steel Parts during Intensive Quenching—N.I. Kobasko

Chapter 8
Steel Quenching in Liquid Media Under Pressure—N.I. Kobasko

Chapter 9
The Steel Superstrengthening Phenomenon—N.I. Kobasko

Chapter 10
Intensive Steel Quenching Methods—N.I. Kobasko

Chapter 11
Design of Industrial Quenching Systems—N.I. Kobasko, G.E. Totten

Chapter 12
Review of Practical Applications of Intensive Quenching Methods—M.A. Aronov, N.I. Kobasko,
J.A. Powell

Chapter 13
Inverse Problems in Quench Process Design—N.I. Kobasko, V.V. Dobryvechir
