STP 1495
HEAT-AIR-MOISTURE TRANSPORT: Measurements on Building Materials

Table of Contents

Overview – P. Mukhopadhyaya, M.K. Kumaran

Improved Suction Technique for the Characterization of Construction Materials—L.G. Thygesen, K.K. Hansen

Water Vapor Transmission Measurement and Significance of Corrections—P. Mukhopadhyaya, K. Kumaran, J. Lackey, D. van Reenen

Evaluation of Functional Approaches to Describe the Moisture Diffusivity of Building Materials—G. Scheffler, J. Grunewald, R. Plagge

Inputs and Analyses: An End User’s Perspective of Heat-Air-Moisture Data—C.P. Decareau, L. Kan, J.P. Piñón

Interlaboratory Comparison of the Thickness of the Destroyed Surface Layer of Closed-cell Foam Insulation Specimens—T.K. Stovall

The Effect of Air Flow on Measured Heat Transport through Wall Cavity Insulation—D.W. Yarbrough, R.S. Graves

The Effect of Vertical Distribution of Water Permeability on the Modeled Neutralization Process in Concrete Walls—Y. Kishimoto, S. Hokoi, K. Harada, S. Takada
