STP 1509

Up Against the Wall: An Examination of Building Envelope Interface

Table of Contents

Overview

What We Do Not Know: Perspectives on Wall-Window Combinations and Performance Assurance We Have Yet to Address—R.C. Mathis, S. Johnson

An Investigation of Climate Loads on Building Façades for Selected Locations in the United States—S.M. Cornick, M.A. Lacasse

The Effect of Air Cavity Convection on the Wetting and Drying Behavior of Wood-Frame Walls Using a Multi-Physics Approach—A.N. Karagiozis, H.M. Kuenzel

How to Detect and Observe Hidden Window Leaks Using Infrared Thermography—R.W. LaTona, O. Vlagea

Condensation Damage Behind Self-Adhering Membrane Flashing and Interior Furnishings on Exterior Residential Walls—C. Ofori-Amanfo, M.J. Spink

Evaluating Drainage Characteristics of Water Resistant Barriers as Part of an Overall Durable Wall Approach for the Building Enclosure—M.F. Williams

Extreme Exposure Fenestration Installations—The Florida Challenge—J.D. Katsaros, C.G. Carll

A Robust Installation for Brick-Mold Windows and Doors Using Self-Adhered Flashing—J.S. Conlon, B.K. O'Rourke, J.D. Katsaros, T.A. Weston

Laboratory Tests of Water Penetration through Wall-Window Interfaces Based on U.S. Residential Window Installation Practice—M.A. Lacasse, M. Rousseau, S.M. Cornick, M. Armstrong, G. Ganapathy, M. Nicholls, M.F. Williams

Assessing the Effectiveness of Wall-Window Interface Details to Manage Rainwater—Selected Results from Window Installation to a Wall Sheathed in Extruded Polystyrene—M.A. Lacasse, M. Armstrong, G. Ganapathy, M. Rousseau, S.M. Cornick, D. Bibe, D. Shuler, A. Hoffman
