STP1584
Evaluation of Existing and New Sensor Technologies for Fatigue, Fracture and Mechanical Testing: 4th Volume

Table of Contents

Digital Image Correlation and Its Applications

Determination of Fracture Behavior of AA6060 Aluminum Alloy Extrusion Using Digital Image Correlation — Kang, Jidong

Advanced Characterization of Sheet Metal Deformation and Forming using Digital Image Correlation — Williams, Bruce

Advanced Digital Image Correlation and Digital Volume Correlation of the Full Field Displacements of Cracks and Defects — Hollis, David

Crack Length Monitoring Techniques

The Influence of Crack Tip Plasticity on Crack Length Measurements using the Potential Drop Technique — Tarnowski, Keith

Application of Direct Current Potential Drop for the J-integral vs. Crack Growth Resistance Curve Characterization — Chen, Xiang

Determination of Calibration Function for Fatigue Crack Propagation by Measurement Surface Deformation — Gubeljak, Nenad

Various Sensors

A Hybrid Optico-Acoustic NDE Approach for Deformation and Damage Monitoring — Kontsos, Antonios

Static and Dynamic Strain Measurement at Ambient and Elevated Temperatures Using an Extrinsic Fabry-Perot Interferometer (EFPI) Optical Strain Sensor — Sebastian, James

Sensors for Elevated Temperature Applications

Use of IR Temperature Measurement and Thermography for Control and Monitoring of Fatigue Tests on Composites — Bailey, Peter

An Assessment of Infrared Thermography for Cyclic High Temperature Measurement and Control — Jones, Jonathan
