Environmental Product Declaration
NATIONAL ALUMINIUM PRODUCTS COMPANY (NAPCO) SAOG
Extruded Aluminum
1. General Information

Name of the Manufacturer: National Aluminium Products Company SAOG

Program Operator: ASTM International

Declaration Number: EPD 119

Date of Issuance: September 27, 2019

End of Validity: September 27, 2024

Product Name: Extruded Aluminum

Product Group: Products of aluminium and aluminium alloys

Declared Product/Declared Unit: 1 ton extruded aluminium

EPD Scope: Cradle-to-gate A1, A2, and A3

Verification:

The CEN Norm EN 15804 serves as the core PCR. Independent verification of the declaration according to ISO 14025 and ISO 21930.

☐ internal     ☑ external

LCA Reviewer and EPD Verifier:
Name: Timothy S. Brooke
Organization: ASTM International

Signature: [Signature]

2. Product

2.1 Product Description
The declared unit is 1 metric ton extruded aluminium – as Manufactured at NAPCO's Oman facility. To convert from one metric tonne to one kilogram, a factor of 0.001 is applied. Product specifications for the extruded aluminium product line is available at: http://napcooman.com/single_page/download

The product group is representative of the entire range of extruded aluminium products produced at the facility.

The products are manufactured in accordance with the following standards:

- ASTM B221-13 / B221M-13 Standard specification for Aluminium and Aluminium-Alloy Extruded Bars, Rods, Wires, profiles, and Tubes
- BS EN 12020-2 Aluminium and Aluminium Alloy – Extruded Precision profiles in alloys EN AW-6060 and EN AW-6063; Tolerance on dimensions and form
- BS EN 755-3 Aluminium and Aluminium Alloy – Extruded Rod / bar, tube and profiles; Round bar, tolerances on dimensions and form
- BS EN 755-4 Aluminium and Aluminium Alloy – Extruded Rod / bar, tube and profiles; Square bar, tolerances on dimensions and form
- BS EN 755-5 Aluminium and Aluminium Alloy – Extruded Rod / bar, tube and profiles; Rectangular bar, tolerances on dimensions and form
- BS EN 755-6 Aluminium and Aluminium Alloy – Extruded Rod / bar, tube and profiles; Hexagonal bar, tolerances on dimensions and form
- BS EN 755-9 Aluminium and Aluminium Alloy – Extruded Rod / bar, tube and profiles; Profiles, tolerances on dimensions and form
- BS EN 755-2 Aluminium and Aluminium Alloy – Extruded Rod / bar, tube and profiles; Mechanical properties
- BS EN 573-3 Aluminium and Aluminium Alloy – Chemical composition and form of wrought products; Chemical composition and form of products
- BS EN 515 Aluminium and Aluminium Alloy – Wrought products – Temper designations
- BS EN 12020-1 Aluminium and Aluminium Alloy – Extruded Precision profiles in alloys EN AW-6060 and EN AW-6063; Technical condition for inspection and delivery

2.2 Application:
Extruded aluminium is used in a variety of applications (architectural, scaffolding, construction, industrial, automotive, electrical, electronics, etc). Various grades, thicknesses, and dimensions are specified according to requirements specific to the application.
Environmental Product Declaration:
NAPCO SAOG
Extruded Aluminum
According to EN 15804, ISO 14025 and ISO 21930

2.3 Technical Data:

<table>

</tr>
</tbody>
</table>

Strength and other technical properties vary and are available from the manufacturer for specific orders.

2.4 Delivery Status:
The declared unit is 1 ton extruded aluminium. The product is available in different dimensions and thicknesses.

2.5 Base Materials:
The extruded aluminium product is 100% aluminium. Aluminium is an alloy that also contains small amounts of other base metals. For the purposes of toxicity screening, aluminium is considered a base ingredient with CAS # 7429-90-5.

2.6 Manufacturing:
The process that occurs at NAPCO’s Facility includes: Receipt of aluminium billets, extrusion, anodizing, powder coating, crimping, fabrication, packing and dispatch of finished extruded aluminium products.

2.7 Environment and Health Considerations during Manufacturing:
Air: Hazardous air emission releases comply with regulatory thresholds.

Water/soil: Pollutants in wastewater discharge comply with regulatory thresholds.

Noise: Due to adequate acoustical absorption and mitigation devices, measurements of sound levels have shown that all values inside and outside the production plant comply with regulatory thresholds.

2.8 Product Processing/Installation:
The product is installed in a manner and with equipment that is specific to the application for which it was purchased.
Environmental Product Declaration:

NAPCO SAOG

Extruded Aluminum

According to EN 15804, ISO 14025 and ISO 21930

2.9 Packaging:
Extruded aluminium is packaged in low density polyethylene plastic wrap. The product is secured to pallets using steel straps. Any other packaging that is required by a particular customer is negotiated separately from the materials contract and is thus outside the system boundary. No other packaging was included in the product system.

2.10 Conditions of Use:
No special features of contents are required for the period of use.

2.11 Environment and Health Considerations During Use:
Extruded aluminium is comprised of inert materials and poses no significant environmental or health considerations during the use phase.

2.12 Reference Service Life:
No reference service life is declared in this EPD as the scope is limited to A1-A3.

2.13 Extraordinary Effects:
Fire: Aluminum products comply with all local and federal laws with respect to fire hazards and control.

Water: There is no evidence to suggest water runoff or exposure under normal and intended operation will violate general water quality standards.

Mechanical destruction: Not relevant for aluminum extrusions.

2.14 Re-use Phase:
At the end of the product’s service life, extruded aluminiums may be reused or recycled, however, neither of these are included in this EPD. No energy recovery possibilities exist.

2.15 Disposal:
The waste code in accordance with the European Waste Index is 17 04 02. At the end of service life the product may either be re-used, disposed in a landfill, or recycled.

2.16 Further Information:
No further information is reported in this EPD.

2.17 Content Declaration Regarding Potential Toxicity
This EPD makes no claim as to the potential toxicity of the product during use. As noted in Section 2.5, the product is 100% aluminium which is considered a base ingredient with CAS # 7429-90-5. No known health risks are associated the use of extruded aluminium.
Environmental Product Declaration:

NAPCO SAOG

Extruded Aluminum

According to EN 15804, ISO 14025 and ISO 21930

3: LCA Calculation Rules

3.1 Declared Unit:
The declared unit is 1 ton extruded aluminium produced by National Aluminium Products Company (NAPCO) SAOG

3.2 System Boundary:
The system boundary for this study is limited to a cradle-to-gate focus. The following three life cycle stages as per the governing PCR are included in the study scope:

- A1- Raw material supply (upstream processes): bauxite extraction, handling, and smelting to produce aluminium billets.
- A2- Transportation: transportation of all input materials and fuels from the suppliers to the gate of the manufacturing facility.
- A3- Manufacturing (core process): the processes that occur at NAPCO’s facility: material handling, extrusion, and packaging. Also includes the operations of the manufacturing facility and all process emissions that occur at the production facility.

3.3 Estimates and Assumptions:
All significant foreground data was gathered from the manufacturer based on measured values (i.e. without estimation). The weighted average product profile is assumed to be representative of the various dimensions and options offered by NAPCO.

3.4 Cut-off Criteria:
The cut-off criteria for all activity stage flows considered within the system boundary conform with ISO14044:2006, section 6 of the IBU PCR Part A:

- All inputs and outputs to a (unit) process were included in the calculation for which data is available. Data gaps were filled by conservative assumptions with average or generic data. Any assumptions for such choices were documented;
- In case of insufficient input data or data gaps for a unit process, the cut-off criteria were 1% of renewable and non-renewable primary energy usage and 1% of the total mass of that unit process. The total neglected input flows, e.g. per module A1-A3 were a maximum of 5% of energy usage and mass. Conservative assumptions in combination with plausibility considerations and expert judgement were used to demonstrate compliance with these criteria;
- Particular care was taken to include material and energy flows known to have the potential to cause significant emissions into air and water or soil related to the environmental indicators of this standard. Conservative assumptions in combination with plausibility considerations and expert judgement were be used to demonstrate compliance with these criteria.
3.5 Background Data and 3.6 Data Quality:
Data was gathered for the primary material inputs used in the production of the extruded aluminium for calendar year 2018. Table 2 describe each LCI data source for raw materials (A1), transportation by mode (A2) and the core manufacture process (A3). Table 2 also includes a data quality assessment for all secondary data on the basis of the technological, temporal, and geographical representativeness as per the IBU PCR.

3.7 Period under Review:

Data was gathered for the primary material inputs used in the production of the extruded aluminium for calendar year 2018.

3.8 Allocation:

NAPCO produces valuable aluminium scrap and no other valuable coproducts from their extrusion operations. The IBU PCR requires economic allocation but, in this case, the overall value of the various coproducts was less than 5% of total revenue. Thus, in accordance with the PCR’s principle of making conservative estimations, we did not allocate any of the environmental burden to the coproducts and instead allocated 100% to the primary product output.

Recycling processes were treated as closed loop recycling because the scrap is recycled in the same facility. No credits were given to the product system for the value of the recyclable materials and the burden to recycle the scrap was incorporated within the modeled unit processes.

Extruded Aluminum
According to EN 15804, ISO 14025 and ISO 21930

3.9 Comparability:

This LCA was created using industry average data for upstream materials. Data variation can result from differences in supplier locations, manufacturing processes, manufacturing efficiency and fuel types used.

4: LCA: Scenarios and additional technical information

The scope of this EPD is limited to modules A1-A3 and thus no additional scenario or technical information is applicable.

5. LCA: Results

Life cycle impact assessment (LCIA) is the phase in which the set of results of the inventory analysis – the inventory flow table – is further processed and interpreted in terms of environmental impacts and resource use inventory metrics. As specified in the IBU PCR, Table 3 below summarizes the LCA results for the cradle-to-gate (A1-A3) product system.

6. Interpretation

Figure 1 shows the relative contribution to the cumulative impacts of the A1 through A3 phases of the cradle-to-gate life cycle. All impact categories are dominated by Module A1. This is due to the fact this module incorporates all the upstream extraction and refining of primary aluminum which is known to be an energy-intensive process. Module A2 (transporting the aluminum to the production facility) and Module A3 (the extrusion of the aluminum) cause between 1-2% of impacts and no more than 3% combined in any impact category.

Figure 1: Contribution of Modules A1, A2, and A3 to Environmental Impact Indicators

- Abiotic Depletion Potential for Fossil Resources
- Abiotic Depletion Potential for Non-Fossil Resources
- Photochemical Ozone Creation/Smog Potential
- Eutrophication Potential
- Acidification Potential
- Ozone Depletion Potential
- Global Warming Potential (climate change)
