ing creep tests (Fett, Keller, Martin, and Rosenfelder), July, 334
Methods of determining subcritical crack growth by static lifetime tests with natural and artificial cracks (Fett and Munz), Nov., 461
Prediction of the strength of ceramic tubular components: Part I—analysis (Jadaan, Shelleman, Conway, Mecholsky, and Tressler), May, 181
Prediction of the strength of ceramic tubular components: Part II—experimental verification (Shelleman, Jadaan, Conway, and Mecholsky), May, 192
Structural ceramics database: data acquisition format for monolithic ceramics (Munro and Begley), May, 250
Theoretical comparison of error in K values determined by different testing methods of ceramics (Martins, Steen, and Rosa), May, 256
Certification
Certification: what it means for inhomogeneity and reference materials (Kennedy), Jan., 60
Computer-aided homogeneity testing of proposed metal and metal alloy reference materials (Hurwitz), Jan., 63
Preparation and certification of uranium oxide (UO2) spectrometric reference materials (Santoliquido), Jan., 63
What constitutes a reference material and how is it certified? (Ridsdale and Meeres), Jan., 71
Certified Reference Material (CRM)
Certification: what it means for inhomogeneity and reference materials (Kennedy), Jan., 60
What constitutes a reference material and how is it certified? (Ridsdale and Meeres), Jan., 71
Charpy impact tests
Charpy impact tests near absolute zero (Tobler, Reed, Hwang, Morra, Ballinger, Nakajima, and Shimamoto), Jan., 34
Children
Procedure to evaluate openings in children’s products for head entrapment hazards (Deppa), July, 263
Cleavage
Specimen size requirements for fracture toughness testing in the transition region (Anderson and Dodds), March 123
Closure
Authors’ closure to discussion of “Design and analysis of jaw crushe r gouging abrasion tests” (Sare and Constantine), Sept., 410
Author’s closure to discussion of “Dynamic loading: a new microhardness test method” (Weiler), Sept., 415
Combined loading
Test apparatus for simulating interactive loads on metal plate wood connections (Wolle, Hall, and Lyles), Nov., 421
Compact tension
Plastic η and η factors for compact tension specimens in J integral estimation (Hu and Albrecth), March, 169
Compliance
Influence of friction on the compliance and crack work rate of an end notched flexure specimen (Gradin, Gustafson, and Hojo), March, 149
Compressive strength
Effect of handling on the compression strength of corrugated fiberboard containers (Singh, Crofts, and Burgess), Sept., 374
Computers
Computer-aided homogeneity testing of proposed metal and metal alloy reference materials (Hurwitz), Jan., 63
Development of methodology for qualifying safety critical A286 threaded fasteners (Hsieh, Hendrickson, and Bamford), March, 135
Pulse current automatic electro-optical characterization of the laser diode (Oyedokun), March, 172
Structural ceramics database: data acquisition format for monolithic ceramics (Munro and Begley), May, 250
Concrete
Determination of thermal diffusivity of construction materials (Low, Tan, and Fwa), Nov., 440
Concrete
Condom inflation testing: strain distribution during test (Gerofi and Shelley), May, 244
Consumer product safety
Procedure to evaluate openings in children’s products for head entrapment hazards (Deppa), July, 263
Continuous wave tests
Pulse current automatic electro-optical characterization of the laser diode (Oyedokun), March, 172
Convection ovens
Comparison of methods for measuring moisture content of aggregate and asphalt-aggregate paving mixtures (Parker and Brown), March, 161
Copper coupons
Change in mass of copper coupons as a measure of severity of environments in accelerated aging tests for electrical contacts (Sproles), July, 292
Cortical Change in mass of copper coupons as a measure of severity of environments in accelerated aging tests for electrical contacts (Sproles), July, 292
Corrosion resistance
Evaluation of rating numbers for atmospheric corrosion resistance of weathering steel (Albrecht and Lee), Nov., 429
Corrugated containers
Effect of handling on the compression strength of corrugated fiberboard containers (Singh, Crofts, and Burgess), Sept., 374
Cotton
Assessment of the effects of treatment, time, and heat on the removal of erasable pen marks from cotton and cotton/polyester blend fabrics (Moore and Eddleman), Sept., 394
Cotton/polyester
Assessment of the effects of treatment, time, and heat on the removal of erasable pen marks from cotton and cotton/polyester blend fabrics (Moore and Eddleman), Sept., 394
Crack work release rate
Influence of friction on the compliance and crack work rate of an end notched flexure specimen (Gradin, Gustafson, and Hojo), March, 149
Creep
Cryogenic creep testing, (McDonald and Hartwig), March, 107
Direct measurements of displacements in the inner roller span of four-point-bending creep tests (Fett, Keller, Martin, and Rosenfelder), July, 334
Creep acceleration
Deformation of aluminum alloy under cyclic creep loadings (Gong and Hsu), Jan., 14
Creep deformation
Novel specimem geometry for double shear creep experiments (Kim, Mohamed, and Earthman), March, 93
Creep fatigue interaction
Creep-fatigue interaction in T11 boiler tube steel (Miller, Marder, Holt, and Voorhees), Nov., 485
Cryogenic material properties
Warm precracking at 295 K and its effects on the 4.2 K toughness of austenitic steels (Tobler and Shimada), July, 312
Cryogenic temperatures
Charpy impact tests near absolute zero (Tobler, Reed, Hwang, Morra, Ballinger, Nakajima, and Shimamoto), Jan., 34
Cryogenic creep testing (McDonald and Hartwig), March, 107
Cyclic creep tests
Deformation of aluminum alloy under cyclic creep loadings (Gong and Hsu), Jan., 14
Cylindrical specimens
Nondestructive density measurements of cylindrical specimens by gamma-ray attenuation (Tan and Fwa), March, 155
Debond resistance
Thick adherend, instrumented double-cantilever-beam specimen for measuring debonding of adhesive joints (Crosley and Ripling), Jan., 24
Definitions
Certification: what it means for inhomogeneity and reference materials (Kennedy), Jan., 60
What constitutes a reference material and how is it certified? (Ridsdale and Meeres), Jan., 71
Deformation
Effect of thickness of elasto-plastic deformation and hysteretic energy dissipated at crack tip (Jendoubi, Ranganathan, and Merah), May, 201
Effects of microcracks and artificial surface cracks on fracture ductility of a torsional pretrained specimen (Makabe, Kanehiro, and Ikoku), May, 221
Delamination crack growth
Influence of friction on the compliance and crack work rate of an end notched flexure specimen (Gradin, Gustafson, and Hojo), March, 149
Density measurements
Nondestructive density measurements of cylindrical specimens by gamma-ray attenuation (Tan and Fwa), March, 155
Design specifications
Static and impact flexural properties of common wire nails (Loferski and Mallin), July, 297

Discussions
Discussion of "Design and analysis of jaw crusher gouging abrasion tests" (Wood), Sept., 408
Discussion of "Dynamic loading: a new microhardness test method" (O’Hern), Sept., 413

Displacements
Direct measurements of displacements in the inner roller span of four-point-bending creep tests (Fett, Keller, Martin, and Rosenfelder), July, 334
Improved wide range expressions for displacements and inverse displacements for standard fracture toughness specimens (Kapp), Jan., 45

Distillation
Comparison of methods for measuring moisture content of aggregate and asphalt-aggregate paving mixtures (Parker and Brown), March, 161

Ductile-brittle transition
Specimen size requirements for fracture toughness testing in the transition region (Anderson and Dodds), March 123

Ductility
Shear strength of a ductile material from torsion of solid cylinders (Lyon), May, 240

Durability
Predicting the durability of paving bricks (Winslow), Jan., 29

Dwell time
Deformation of aluminum alloy under cyclic creep loadings (Gong and Hsu), Jan., 14

E

Electrical contacts
Change in mass of copper coupons as a measure of severity of environments in accelerated aging tests for electrical contacts (Sproles), July, 292

Electrical resistance
Electrical resistance measurements on type 304 stainless steel with different degrees of sensitization (Kain, Chouthai, and Gadiyar), July, 321

Electron beam radiation
Thermal shock and thermal fatigue testing (Yuen and Walter), Sept., 403

End notched flexure specimens
Influence of friction on the compliance and crack work rate of an end notched flexure specimen (Gradin, Gustafson, and Hojo), March, 149

Engineering properties
Laboratory testing of river gravel used in arrester beds (Al-Qadi and Rivera-Ortiz), July, 280

Epoxies
Shear strength of a ductile material from torsion of solid cylinders (Lyon), May, 240

Error analysis
Theoretical comparison of error in $K_\text{c}$ values determined by different testing methods of ceramics (Martins, Steen, and Rosa), May, 256

European Yield Model
Application of the European Yield Model to nailed joints in southern hardwoods (Pellicane), Sept., 385

F

Failure probability
Prediction of the strength of ceramic tubular components: Part I—analysis (Jadaan, Shellem, Conroy, Mecholsky, and Tressler), May, 181
Prediction of the strength of ceramic tubular components: Part II—experimental verification (Shellem, Jadaan, Conroy, and Mecholsky), May, 192

Failure statistics
Prediction of the strength of ceramic tubular components: Part II—experimental verification (Shellem, Jadaan, Conroy, and Mecholsky), May, 192

Fastener quality
Understanding impact testing of panel nails and staples (Loferski and Stern), Sept., 379

Fatigue
Effect of thickness of elasto-plastic deformation and hysteretic energy dissipated at crack tip (Jendoubi, Ranganathan, and Merah), May, 201
Energy stored in a specimen under fatigue limit loading conditions (Kalata, Blonin, and Hirtig), July, 326
Prediction of fatigue life of asphalt concrete beams from fracture tests (Ramsamooj), May, 231
Warm precracking at 295 K and its effects on the 4-K toughness of austenitic steels (Tobler and Shimada), July, 312

Fatigue life
Development of methodology for qualifying safety critical A286 threaded fasteners (Haeh, Hendrickson, and Bamford), March, 135
Reliability and life estimation from component fatigue failures below the go-no-go fatigue life limit (Parida), Nov., 450

Fatigue predictions
Fatigue predictions for components under biaxial reversed loading (Lee and Chang), Sept., 359

Fiber optic sensors
Vibration monitoring of small lightweight components using fiber optic sensors (Powers and Chuang), Nov., 493

Formability analysis
Cantilever-type bend test technique for formability analysis of strip/plate metals (Selcuk and Rawlings), Sept., 349

Four-point bending tests
Direct measurements of displacements in the inner roller span of four-point-bending creep tests (Fett, Keller, Martin, and Rosenfelder), July, 334

Fracture ductility
Effects of microcracks and artificial surface cracks on fracture ductility of a torsional pretrained specimen (Makabe, Kane shiro, and Itozaka), May, 221

Fracture mechanics
Improved wide range expressions for displacements and inverse displacements for standard fracture toughness specimens (Kapp), Jan., 45

Methods of determining subcritical crack growth by static lifetime tests with natural and artificial cracks (Fett and Munz), Nov., 461
Prediction of fatigue life of asphalt concrete beams from fracture tests (Ramsamooj), May, 231

Fracture specimens
Improved wide range expressions for displacements and inverse displacements for standard fracture toughness specimens (Kapp), Jan., 45

Fracture toughness
Specimen size requirements for fracture toughness testing in the transition region (Anderson and Dodds), March, 123
Theoretical comparison of error in $K_\text{c}$ values determined by different testing methods of ceramics (Martins, Steen, and Rosa), May, 256
Warm precracking at 295 K and its effects on the 4-K toughness of austenitic steels (Tobler and Shimada), July, 312

Fracture toughness tests
Thick adherent, instrumented double-cantilever-beam specimen for measuring debonding of adhesive joints (Crosley and Rippling), Jan., 24

Friction
Influence of friction on the compliance and crack work rate of an end-notched flexure specimen (Gradin, Gustafson, and Hojo), March, 149

G

Gamma-rays
Nondestructive density measurements of cylindrical specimens by gamma-ray attenuation (Tan and Fwa), March, 155

Gas analysis
Nonintrusive test for argon gas content in windows: feasibility study (Latta, Bagman, and Wagner), May, 214

Go-no-go fatigue tests
Reliability and life estimation from component fatigue failures below the go-no-go fatigue life limit (Parida), Nov., 450

Gouging abrasion
Design and analysis of jaw crusher gouging abrasion tests (Sare and Constantine), March, 115

Gravel
Laboratory testing of river gravel used in arrester beds (Al-Qadi and Rivera-Ortiz), July, 280

H

Handling
Effect of handling on the compression strength of corrugated fiberboard containers (Singh, Crofts, and Burgess), Sept., 374

Hardness
Analysis of the size effect in low-hardness testing of metals (Atkinson), Sept., 368

Heat conduction
Determination of thermal diffusivity of construction materials (Low, Tan, and Fwa), Nov., 440
Homogeneity
Computer-aided homogeneity testing of proposed metal and metal alloy reference materials (Hurwitz), Jan., 63

Hysteretic energy
Effect of thickness of elasto-plastic deformation and hysteretic energy dissipated at crack tip (Jendoubi, Ranganathan, and Merah), May, 201

Image analysis
Accuracy of a volume fraction measurement using areal image analysis (Shi and Winslow), May, 210

Impact resistance
Understanding impact testing of pallet nails and staples (Loferski and Stern), Sept., 379

Indentation
Analysis of the size effect in low-hardness testing of metals (Atkinson), Sept., 368

Inflation tests
Condor inflation testing: strain distribution during test (Gerofi and Shelley), May, 244

Intense Pulsed Neutron Source (IPNS)
In situ ultrasonic examination of the Intense Pulsed Neutron Source (IPNS) enriched uranium target assembly (Bohringer, Kupperman, Bailey, and Knox), Nov., 467

Interactions
Models and interactions (Mandel), Sept., 398

Interlaboratory tests
Models and interactions (Mandel), Sept., 398

International Organization for Standardization (ISO)
What constitutes a reference material and how is it certified? (Ridsdale and Meeres), Jan., 71

J
J integral
Plastic $\eta$ and $\gamma$ factors for compact tension specimen in J-integral estimation (Hu and Albrecht), March, 169

J-R curves
Normalization method for developing J-R curves with the J-MN function (Landes, Zhou, Lee, and Herrera), July, 305

Jaw crushers
Design and analysis of jaw crusher gouging abrasion tests (Sare and Constantine), March, 115

Laser diodes
Pulse current automatic electro-optical characterization of the laser diode (Oyedokun), March, 172

Laundring
Assessment of the effects of treatment, time, and heat on the removal of erasable pen marks from cotton and cotton/polyester blend fabrics (Moore and Eddleman), Sept., 394

Lead
New method for burst testing of low strength materials (Goodwin and Nguyen-Duy), Jan., 41

Lead alloys
New method for burst testing of low strength materials (Goodwin and Nguyen-Duy), Jan., 41

Linear models
Models and interactions (Mandel), Sept., 398

LMN function
Normalization method for developing J-R curves with the LMN function (Landes, Zhou, Lee, and Herrera), July, 305

Loading
Application of the European Yield Model to nailed joints in southern hardwoods (Pellicane), Sept., 385

Cryogenic creep testing (McDonald and Hartwig), March, 107

Energy stored in a specimen under fatigue limit loading conditions (Galeta, Blotny, and Harig), July, 326

Fatigue predictions for components under biaxial reversed loading (Lee and Chang), Sept., 359

Normalization method for developing J-R curves with the LMN function (Landes, Zhou, Lee, and Herrera), July, 305

Prediction of fatigue life of asphalt concrete beams from fracture tests (Ramamoorthy), May, 231

Load-slip
Mechanical behavior of nailed joints with various side member materials (Pellicane), March, 97

M
Marking pens
Assessment of the effects of treatment, time, and heat on the removal of erasable pen marks from cotton and cotton/polyester blend fabrics (Moore and Eddleman), Sept., 394

Materials properties
Structural ceramics database: data acquisition format for monolithic ceramics (Munro and Begley), May, 250

Mathematical models
Energy stored in a specimen under fatigue limit loading conditions (Galeta, Blotny, and Harig), July, 326

Mechanical behavior
Mechanical behavior of nailed joints with various side member materials (Pellicane), March, 97

Mechanical components
Fatigue predictions for components under biaxial reversed loading (Lee and Chang), Sept., 359

Mechanical properties
Creep-fatigue interaction in T11 boiler tube steel (Miller, Marder, Holt, and Voorhees), Nov., 485

Mercury intrusion
Predicting the durability of paving bricks (Winslow), Jan., 29

Metal analysis
Metals analysis in the plastics additives industry: quality assurance considerations (Nagourney and Madan), Jan., 77

Metal connector plates
Test apparatus for simulating interactive loads on metal plate wood connections (Wolfe, Hall, and Lyles), Nov., 421

Metal reference material
Computer-aided homogeneity testing of proposed metal and metal alloy reference materials (Hurwitz), Jan., 63

Metals
Cantilever-type bend test technique for formability analysis of strip/plate metals (Selcuk and Rawlings), Sept., 349

Introduction to symposium on the use of reference materials in the metals analysis laboratory (Bottoni), Jan., 55

Standard Reference Materials: NBS-ASTM cooperation (Rasberry), Jan., 56

MIBANT angle
Static and impact flexural properties of common wire nails (Loferski and McLain), July, 297

Microcracks
Effects of microcracks and artificial surface cracks on fracture ductility of a torsional pretrained specimen (Makabe, Kanehise, and Itozako), May, 221

Microscopy
Accuracy of a volume fraction measurement using areal image analysis (Shi and Winslow), May, 210

Microwaves
Comparison of methods for measuring moisture content of aggregate and asphalt-aggregate paving mixtures (Parker and Brown), March, 161

Moisture content
Comparison of methods for measuring moisture content of aggregate and asphalt-aggregate paving mixtures (Parker and Brown), March, 161

N
Nailed joints
Application of the European Yield Model to nailed joints in southern hardwoods (Pellicane), Sept., 385

Mechanical behavior of nailed joints with various side member materials (Pellicane), March, 97

Nails
Static and impact flexural properties of common wire nails (Loferski and McLain), July, 297

Understanding impact testing of pallet nails and staples (Loferski and Stern), Sept., 397

National Institute of Standards and Technology
Standard Reference Materials: NBS-ASTM cooperation (Rasberry), Jan., 56

Neutrons
In situ ultrasonic examination of the Intense Pulsed Neutron Source (IPNS) enriched uranium target assembly (Bohringer, Kupperman, Bailey, and Knox), Nov., 467

Nondestructive tests
Electrical resistance measurements on type 304 stainless steel with different degrees of sensitization (Kain, Chouthai, and Gadiyar), July, 321

Nondestructive density measurements of
cylindrical specimens by gamma-ray attenuation (Tan and Fwa), March, 155

Nonproportional hardening
Fatigue predictions for components under biaxial reversed loading (Lee and Chiang), Sept., 359

Normalization
Normalization method for developing J-R curves with the L/MN function (Landes, Zhou, Lee, and Herrera), July, 305

Oxidation
Change in mass of copper coupons as a measure of severity of environments in accelerated aging tests for electrical contacts (Sproles), July, 292

P

Pallets
Understanding impact testing of pallet nails and staples (Loferski and Stern), Sept., 379

Plastic ÿ and γ factors
Plastic ÿ and γ factors for compact tension specimen in J-integral estimation (Hu and Albrecht), March, 169

Plastic additives
Metals analysis in the plastics additives industry: quality assurance considerations (Nagourney and Madian), Jan., 77

Plastic pipes
Analysis of large diameter high-density polyethylene plastic pipes as vertical shafts in landfills (Hossain and Lytton), Nov., 475

Plastics
Glossary (German/English, English/German) of specialized plastics testing terminology (Meraw), July, 338

Polyethylene
Analysis of large diameter high-density polyethylene plastic pipes as vertical shafts in landfills (Hossain and Lytton), Nov., 475

Pore size distribution
Predicting the durability of paving bricks (Winslow), Jan., 29

Proof test
Development of methodology for qualifying safety critical A286 threaded fasteners (Hsieh, Hendrickson, and Bamford), March, 135

Pulse tests
Pulse current automatic electro-optical characterization of the laser diode (Oyedokun), March, 172

Q

Quality assurance
Metals analysis in the plastics additives industry: quality assurance considerations (Nagourney and Madian), Jan., 77

Quality control
Condom inflation testing: strain distribution during test (Gerofi and Shelley), May, 244

R

Radiant tubes
Analysis of gas-fired ceramic radiant tubes during transient heating: Part I—thermal transient modeling (Segall, Hoffmann, and Modest), Nov., 454

Radiation attenuation
Nondestructive density measurements of cylindrical specimens by gamma-ray attenuation (Tan and Fwa), March, 155

Radius-to-thickness (R/t) ratio
Cantilever-type bend test technique for formability analysis of strip/plate metals (Selcuk and Rawlings), Sept., 349

Rating numbers
Evaluation of rating numbers for atmospheric corrosion resistance of weathering steel (Albrecht and Lee), Nov., 429

Reference Material (RM)
Preparation and certification of uranium oxide (UO₂) spectrometric reference materials (Santoliquido), Jan., 83

Reliability
Reliability and life estimation from component fatigue failures below the go-no-go fatigue life limit (Parida), Nov., 450

Repeatability
Evaluation of variability in resilient modulus test results (ASTM D 4123) (Brown and Foo), Jan., 1

Research
Standard Reference Materials: NBS-ASTM cooperation (Rasberry), Jan., 56

Resilient modulus
Evaluation of variability in resilient modulus test results (ASTM D 4123), (Brown and Foo), Jan., 1

Resonant response
Vibration monitoring of small lightweight components using fiber optic sensors (Powers and Chuang), Nov., 493

Rheopexial behavior
New method for burst testing of low strength materials (Goodwin and Nguyen-Duy), Jan., 41

S

Shear strain
Novel specimen geometry for double shear creep experiments (Kim, Mohamed, and Earthman), March, 93

Shear strength
Shear strength of a ductile material from torsion of solid cylinders (Lyon), May, 240

Shear stress state
Novel specimen geometry for double shear creep experiments (Kim, Mohamed, and Earthman), March, 93

Size effect
Analysis of the size effect in low-hardness testing of metals (Atkinson), Sept., 368

Specimen geometry
Novel specimen geometry for double shear creep experiments (Kim, Mohamed, and Earthman), March, 93

Specimens
Plastic ÿ and γ factors for compact tension specimen J-integral estimation (Hu and Albrecht), March, 169

Specimen size requirements for fracture toughness testing in the transition region (Anderson and Dods), March 123

Standard Reference Material (SRM)
Certification: what it means for inhomogeneity and reference materials (Kennedy), Jan., 60

Introduction to symposium on the use of reference materials in the metals analysis laboratory (Bottone), Jan., 55

Standard Reference Materials: NBS-ASTM cooperation (Rasberry), Jan., 56

Standards
Condom inflation testing: strain distribution during test (Gerofi and Shelley), May, 244

Standards glossary
Glossary (German/English, English/German) of specialized plastics testing terminology (Meraw), July, 338

Staples
Understanding impact testing of pallet nails and staples (Loferski and Stern), Sept., 379

Steel
Reliability and life estimation from component fatigue failures below the go-no-go fatigue life limit (Parida), Nov., 450

Stored energy
Energy stored in a specimen under fatigue limit loading conditions (Kaleta, Blotny, and Harig), July, 326

Strain
Effect of thickness of elasto-plastic deformation and hysteretic energy dissipated at crack tip (Jendoubi, Ranganathan, and Merah), May, 201

Strength
Mechanical behavior of nailed joints with various side member materials (Pellicane), March, 97

Prediction of the strength of ceramic tubular components: Part I—analysis (Ja-daan, Shelleman, Conway, Mecholsky, and Tressler), May, 181

Stress
Evaluation of variability in resilient modulus test results (ASTM D 4123), (Brown and Foo), Jan., 1

Structural Ceramics Database (SCD)
Structural ceramics database: data acquisition format for monolithic ceramics (Munro and Begley), May, 250

Structural components
Thermal shock and thermal fatigue testing (Yuen and Walter), Sept., 403

Subcritical crack growth
Methods of determining subcritical crack growth by static lifetime tests with natural and artificial cracks (Fett and Munz), Nov., 461

Symposium
Standard Reference Materials: NBS-ASTM cooperation (Rasberry), Jan., 56

T

Terminology
Glossary (German/English, English/German) of specialized plastics testing terminology (Meraw), July, 338
Test grips
Test apparatus for simulating interactive loads on metal plate wood connections (Wolfe, Hall, and Lyles), Nov., 421

Thermal diffusivity
Determination of thermal diffusivity of construction materials (Low, Tan, and Fwa), Nov., 440

Thermal fatigue
Thermal shock and thermal fatigue testing (Yuen and Walter), Sept., 403

Thermal insulation
Nonintrusive test for argon gas content in windows: feasibility study (Latta, Bogan, and Wagner), May, 214

Thermal profile
Analysis of gas-fired ceramic radiant tubes during transient heating: Part I—thermal transient modeling (Segall, Hellmann, and Modest), Nov., 454

Triaxial tests
Laboratory testing of river gravel used in arrester beds (Al-Qadi and Rivera-Oritz), July, 280

Ultrasonic monitoring
In situ ultrasonic examination of the Intense Pulsed Neutron Source (IPNS) enriched uranium target assembly (Bohringer, Kupperman, Bailey, and Knox), Nov., 467

Uranium
In situ ultrasonic examination of the Intense Pulsed Neutron Source (IPNS) enriched uranium target assembly (Bohringer, Kupperman, Bailey, and Knox), Nov., 467

Uranium oxide (U3O8)
Preparation and certification of uranium oxide (U3O8) spectrometric reference materials (Santoliquido), Jan., 83

Vibration monitoring
In situ ultrasonic examination of the Intense Pulsed Neutron Source (IPNS) enriched uranium target assembly (Bohringer, Kupperman, Bailey, and Knox), Nov., 467

Vickers hardness
Analysis of the size effect in low-hardness testing of metals (Atkinson), Sept., 368

Volume fraction
Analysis of the size effect in low-hardness testing of metals (Atkinson), Sept., 368

Yield stress
Static and impact flexural properties of common wire nails (Loferski and McLain), July, 297
