Citations presented in the first edition, edited by W. H. Stahl are pertinent because we used it as a base for the second edition. A significant number of the compounds reported on in the first edition have been given to us from the personal files of Dr. Birger Drake of the Swedish Food Institute. As editor of the second edition, I am most grateful to Professor John Powers, University of Georgia for his diligent support during the preparation of this work. Many thanks go to Bill Galetto and Pat Hoffman, McCormick & Company, for supplying and checking the Wiswesser Line Notations. A special note of thanks goes to Bob Hubbard, International Business Machines Corp., for his programming the human errors out of our data collection and keypunching as well as running the programs required to produce the tables used in this edition. The abstractors, Andy Dravieks, Betty Dunbar, Mark Ford, Marion Genser, Derek Land, Carolyn McCord, and John Powers deserve an extra special note of thanks for the hours spent reading the references and providing the record for the data collection sheets.
