Manual on Test Sieving Methods: Guidelines for Establishing Sieve Analysis Procedures

5th Edition

Trent Smith, Editor

ASTM Stock #: MNL32-5TH

Printed in U.S.A.
Foreword

This manual on test sieving methods is intended for use as a supplement to, and not as a substitute for, the many ASTM standards relating to the sieve analysis of materials. There has been a need for a manual that would bring together, from many sources, proven methods for making reliable sieve analysis to serve as a guide for the novice and a reference for the more advanced.

Test Sieving Methods was originally compiled by W. C. Mahlig and A. E. Reed. The latest revisions to this manual were made by a working subcommittee, ASTM E29.01. Please contact the sponsoring committee, E29 on Particle and Spray Characterization, for any additional information. This is MNL 32 in ASTM International’s manual series.
Contents

1—Types of Sieves ................................................................. 1
   1.1 ASTM Standard Test Sieves ........................................... 1
   1.2 International Standards Organization (ISO) Test Sieves ........ 5
   1.3 ASTM and ISO Test Sieves with Enhanced Accuracy .......... 10
   1.4 ASTM Perforated-Plate Sieves ...................................... 12
   1.5 ASTM Precision Electroformed Sieves ......................... 15
2—Sieving Methods ............................................................... 17
   2.1 Hand Sieving ............................................................. 17
   2.2 Standard Mechanical Sieve Shakers ............................... 17
   2.3 Vibratory Mechanical Sieve Shakers ............................. 18
   2.4 Miscellaneous Mechanical Sieve Shakers ...................... 19
3—Test Sieving Procedures ................................................... 20
   3.1 Sample Size ............................................................. 20
   3.2 Sample Preparation ................................................... 21
   3.3 The Sieve Stack ........................................................ 21
   3.4 Testing ................................................................. 22
   3.5 Weighing and Calculations ......................................... 22
4—Sieving Practices ............................................................. 26
   4.1 Sampling ................................................................. 26
   4.2 Wet Sieving ............................................................. 29
   4.3 Sieve Care and Cleaning .............................................. 31
   4.4 Sieving Aids and Flow Agents ..................................... 32
   4.5 Setting Up a Quality Control Program ......................... 32
5—Appendix ........................................................................... 34
   Table A-1: Suggested Bulk Volume of Test Sample for Sieve Analysis with 8-in. and 200-mm Round Sieves ........................................... 34
   Table A-2: Typical Bulk Densities of Various Particulate Materials .... 35
   Table A-3: List of ASTM Published Standards on Sieve Analysis Procedures for Specific Materials or Industries ......................... 39
   Table A-4: List of ASTM Published Standards on Sampling of Particulate Materials ......................................................... 56
6—Nomenclature ................................................................... 62
7—References ....................................................................... 66
Trent R. Smith received his Business degree from Xavier University in 1993. Trent has acquired his working knowledge of sieving, sampling and various materials testing applications during his more than 20-year tenure at Gilson Company, Inc. In 2000, Trent became President and CEO of Gilson Company, Inc., a worldwide leader in the sale of materials testing equipment, where he expanded his expertise through interaction as a user, reseller and manufacturer of sieves, sieve shakers, sample splitters and various other testing instruments associated with materials testing.

Over the many years he has worked with various industries and specialized applications where sieving and sampling were critical to operations. Since 2001 Trent has been an active member of ASTM Committee E29 on Particle and Spray Characterization, Subcommittee E29.01 on Sieves, Sieving Methods, and Screening Media.
