Dynamic Elastic Modulus Measurements in Materials

Alan Wolfenden, editor

ASTM
1916 Race Street
Philadelphia, PA 19103
Foreword

This publication, *Dynamic Elastic Modulus Measurements in Materials*, contains papers presented at the Symposium on Dynamic Modulus Measurements, which was held in Kansas City, Missouri, 25-26 May 1989. The symposium was sponsored by ASTM Committee E-28 on Mechanical Properties and its task group E28.03.05 on Dynamic Modulus Measurements. Alan Wolfenden, Texas A & M, presided as symposium chairman and was editor of this publication.
Contents

Overview

Dynamic Modulus Measurements and Materials Research—B. S. BERRY

Measurement of the Modulus of Dynamic Elasticity of Extremely Thin (Sub-Wavelength) Specimens—V. K. KINRA AND V. DAYAL

The Pulsed Ultrasonic Velocity Method for Determining Material Dynamic Elastic Moduli—G. V. BLESSING

An Experimental Study of the Complex Dynamic Modulus—G. G. WREN AND V. K. KINRA

Longitudinal and Flexural Resonance Methods for the Determination of the Variation with Temperature of Dynamic Young's Modulus in 4330V Steel—L. S. COOK, A. WOLFENDEN, AND G. M. LUDTKA

Impulse Excitation: A Technique for Dynamic Modulus Measurement—J. W. LEMMENS

Measurement and Analysis of Dynamic Modulus in Al/SiC Composites—J. M. WOLLA AND A. WOLFENDEN

Monocrystal-Polycrystal Elastic-Constant Models—H. LEDBETTER

Detection of the Initiation and Growth of Cracks Using Precision, Continuous Modulus Measurements—S. H. CARPENTER

Sample Coupling in Resonant Column Testing of Cemented Soils—P. L. LOVELADY AND M. PICORNELL

Interactive Processing of Complex Modulus Data—B. L. FOWLER
