NOTE
The Society is not responsible as a body, for the statements and opinions advanced in this publication.

Peer Review Policy

Each paper published in this volume was evaluated by three peer reviewers. The authors addressed all of the reviewers' comments to the satisfaction of both the technical editor(s) and the ASTM Committee on Publications.

The quality of the papers in this publication reflects not only the obvious efforts of the authors and the technical editor(s), but also the work of these peer reviewers. The ASTM Committee on Publications acknowledges with appreciation their dedication and contribution of time and effort on behalf of ASTM.

J. L. Swedlow  
1935–1989  
Dedication

Dr. Swedlow was one of a rather small but very active group in the early history of Committee E24 on Fracture Testing. Professor Swedlow served in a variety of roles including researcher, organizer, initiator, and expeditor within Committee E24 and within related applied mechanics and fracture mechanics activities.

Professor Swedlow’s services to Committee E24 include membership on Fracture Mechanics Test Methods Subcommittee (1965-1973); Representative to International Congress on Fracture (1969- ); National Symposium Task Group (1972-1989), Chairman (1977-1989); Executive Committee (1973- ). Jerry was the chairman of the organizing committee for the first National Symposium on Fracture Mechanics to be held away from Lehigh University (1970). In subsequent years, Jerry served on the organizing committees of three additional National Symposia and cochairman of the ninth symposium. For many years until his death, Jerry was responsible to Committee E24 for the organizational oversight of all National Symposia. He played a crucial role, along with a few others, in assuring the very high quality and vigor that we have come to associate with these Symposia. In a related activity, Professor Swedlow for the past 20 years served as editor of the Reports of Current Research for the International Journal of Fracture.
Professor Swedlow was also a member of Committee D30 on High Modulus Fibers and Their Composites from 1972 to 1975. During that time, Jerry participated in some of the earliest work on the establishment of test methods and analysis models for the fracture mechanics behavior of graphite/epoxy composites. That initial work is still cited by those active in the research area.

Professor Swedlow's involvement in Committee E24 research activities was primarily focused on the nature of elastoplastic responses of materials with cracks. One of Jerry's principal research concerns in this work was to match numerical responses to experimental data. He established the importance of a proper understanding of uniaxial stress-strain curve development in being able to establish meaningful correlation. Additionally, he was an early contributor regarding the development of ductile fracture criteria and the influence of crack front curvature on plane strain fracture toughness measurements. One of his earliest and abiding research interests related to these issues was that of the three-dimensional character of elastic and elasto-plastic response of cracked bodies. As part of this activity Jerry was involved in studies of the behavior of surface cracks. Some of his contributions in this field are identified in the first paper in this publication. He made numerous presentations within the task group Structure of Committee E24, as well as the National Symposia.

Committee E24 has recognized the many diverse and critical contributions made by Professor Swedlow. In recognition of these, ASTM conferred upon Jerry the singular honor of Fellow of ASTM in 1984. Jerry was also this year named the first recipient of the Committee E24 Fracture Mechanics Medal Award.

A keen interest in and dedication to the goals of ASTM Committee E24 stands as an example to all of us who will commit to the development and application of research findings through professional associations.

T. A. Cruse
Foreword

The symposium on Surface-Crack Growth: Models, Experiments, and Structures was held in Sparks, Nevada, 25 April 1988. The symposium was sponsored by ASTM Committee E24 on Fracture Testing, Walter G. Reuter, Idaho National Engineering Laboratory, John H. Underwood, U.S. Army Benet Laboratories, and James C. Newman, Jr., NASA Langley Research Center, presided as symposium cochairmen and are editors of this publication.
## Contents

### Overview

#### MODELS AND EXPERIMENTS (MONOTOMIC LOADING)

- **A Surface Crack Review: Elastic and Elastic-Plastic Behavior**—D. M. Parks
  - p. 9

  - p. 34

- **Tabulated Stress-Intensity Factors for Corner Cracks at Holes Under Stress Gradients**—R. Perez, A. F. Grandt, Jr., and C. R. Saff
  - p. 49

- **Fracture Analysis for Three-Dimensional Bodies with Surface Crack**—Li Yingzhi
  - p. 63

  - p. 77

- **Analysis of Optical Measurements of Free-Surface Effects on Natural Surface and Through Cracks**—C. W. Smith, M. Rezvani, and C. W. Chang
  - p. 99

- **Optical and Finite-Element Investigation of a Plastically Deformed Surface Flaw Under Tension**—J. C. Olinkiewicz, H V. Tippur, and F. P. Chiang
  - p. 112

- **Extraction of Stress-Intensity Factor from In-Plane Displacements Measured by Holographic Interferometry**—J. W. Dally, C. A. Sciammarella, and I. Shareef
  - p. 130

- **Fracture Behavior Prediction for Rapidly Loaded Surface-Cracked Specimens**—M. T. Kirk and E. M. Hackett
  - p. 142

- **Measurements of CTOD and CTOA Around Surface-Crack Perimeters and Relationships Between Elastic and Elastic-Plastic CTOD Values**—W. G. Reuter and W. R. Lloyd
  - p. 152

- **Surface Cracks in Thick Laminated Fiber Composite Plates**—S. N. Chatterjee
  - p. 177

- **Surface Crack Analysis Applied to Impact Damage in Thick Graphite/Epoxy Composite**—C. C. Poe, Jr., C. E. Harris, and D. H. Morris
  - p. 194
FATIGUE CRACK GROWTH

A Novel Procedure to Study Crack Initiation and Growth in Thermal Fatigue Testing—N. J. MARCHAND, W. DORNER, AND B. ILSCHNER 237

Observations of Three-Dimensional Surface Flaw Geometries During Fatigue Crack Growth in PMMA—W. A. TROHA, T. NICHOLAS, AND A. F. GRANDT, JR. 260

Some Special Computations and Experiments on Surface Crack Growth—M. PRODAN AND J. C. RADON 287

Influences of Crack Closure and Load History on Near-Threshold Crack Growth Behavior in Surface Flaws—J. R. JIRA, D. A. NAGY, AND T. NICHOLAS 303

Growth of Surface Cracks Under Fatigue and Monotonic Increasing Load—L. HODULAK 315

Experimental Investigation of Subcritical Growth of a Surface Flaw—M. RAMULU 333

Measurement and Analysis of Surface Cracks in Tubular Threaded Connections—A. NEWPORT AND G. GLINKA 348

Propagation of Surface Cracks in Notched and Unnotched Rods—M. CASPERS, C. MATTHECK, AND D. MUNZ 365

Theoretical and Experimental Analyses of Surface Fatigue Cracks in Weldments—X. NIU AND G. GLINKA 390
