**Authorization to photocopy items for internal, personal, or educational classroom use, or the internal, personal, or educational classroom use of specific clients, is granted by the American Society for Testing and Materials (ASTM) provided that the appropriate fee is paid to the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923; Tel: (508) 750-8400; online: <http://www.copyright.com/>.**

### **Peer Review Policy**

Each paper published in this volume was evaluated by two peer reviewers and at least one editor. The authors addressed all of the reviewers' comments to the satisfaction of both the technical editor(s) and the ASTM Committee on Publications.

To make technical information available as quickly as possible, the peer-reviewed papers in this publication were prepared "camera-ready" as submitted by the authors.

The quality of the papers in this publication reflects not only the obvious efforts of the authors and the technical editor(s), but also the work of the peer reviewers. The ASTM Committee on Publications acknowledges with appreciation their dedication and contribution of time and effort on behalf of ASTM.

# Foreword

This publication, *Fatigue and Fracture Mechanics: Twenty-Ninth Volume*, contains papers presented at the Twenty-Ninth National Symposium on Fatigue and Fracture Mechanics, held in Stanford, CA on 24-26 June 1997. The sponsor of the event was ASTM Committee E8 on Fatigue and Fracture. Tina L. Panontin, Materials and Failure Analysis Group, NASA Ames Research Center, Moffett Field, CA, and Sheri D. Sheppard, Mechanical Engineering Department, Stanford University, Stanford, CA, chaired the symposium and served as editors for this publication.

# Contents

<b>Overview</b>	1
JERRY L. SWEDLOW MEMORIAL LECTURE	
<b>Fracture Analysis in the Ductile/Brittle Regime: A Predictive Tool Using Cell Models—C. F. SHIH</b>	9
FRACTURE	
<b>Dynamic Initiation Fracture Toughness of a Pressure Vessel Steel in the Transition Region—R. E. LINK AND S. M. GRAHAM</b>	17
<b>Applicability of Sub-Charpy-Size Bend and Impact Specimens for Estimation of Fracture Toughness in the Transition Region—T. PLANMAN, M. NEVALAINEN, M. VALO, AND K. WALLIN</b>	40
<b>Fracture Behavior of Surface Crack Tension Specimens in the Ductile-Brittle Transition Period—J. A. JOYCE AND R. E. LINK</b>	55
<b>A New Method for Predicting Extensive Ductile Tearing Using Finite Element Analysis—M. L. GENTILCORE AND R. H. ROBERTS</b>	82
<b>Elastic-Plastic Crack Growth Simulation and Residual Strength Prediction of Thin Plates with Single and Multiple Cracks—C. -S. CHEN, P. A. WAWRZYNEK, AND A. R. INGRAFFEA</b>	97
<b>Analyses of Buckling and Stable Tearing in Thin-Sheet Metals—B. R. SESHADRI AND J. C. NEWMAN, JR.</b>	114
<b>A Numerical Investigation of Loading Rate Effects in Pre-Cracked CVN Specimens—K. C. KOPPENHOEFER AND R. H. DODDS</b>	135
<b>Effect of Residual Stress on Brittle Fracture Testing—M. R. HILL AND T. L. PANONTIN</b>	154
<b>Evaluation of Stress-Intensity Factors Using General Finite-Element Models—S. A. SMITH AND I. S. RAJU</b>	176
<b>Effects of Finite Element Mesh on Numerical Prediction of Ductile Tearing—B. SKALLERUD AND Z. I. ZHANG</b>	201
<b>Fully Plastic J-Integrals for Through-Wall Axial Cracks in Pipes—D. O. HARRIS AND P. J. WOYTOWITZ</b>	215
<b>Elastoplastic Crack Growth in Pressure-Sensitive Materials—K. R. SHAH</b>	233
<b>A Simplified Transformation Approach to Obtain Structural Calibration Functions—J. R. B. CRUZ AND J. D. LANDES</b>	248

<b>A New Theoretical Framework for Inelastic Fracture Processes—</b> M. M. RASHID AND R. ROY	264
<b>The Use of Local Approach to Fracture in Reactor Pressure Vessel Structural Integrity Assessment: Synthesis of a Cooperative Research Program Between EDF, CEA, Framatome and AEA Technology—</b> D. MOINEREAU, J. M. FRUND, J. BROCHARD, M. P. VALETA, B. MARINI, P. JOLY, D. GUICHARD, S. BHANDARI, A. SHERRY, C. FRANCE, AND D. J. SANDERSON	284
<b>Evaluation of Fracture Toughness Results and Transferability to Fracture Assessment of Welded Joints—</b> F. MINAMI AND M. TOYODA	315
<b>Micromechanical Prediction of Fracture Toughness for Pressure Vessel Steel Using a Coupled Method—</b> M. R. GOLDTHORPE AND C. S. WIESNER	341
<b>On the Gurson Micro-Mechanical Parameters—</b> Z. L. ZHANG AND M. HAUGE	364
<b>Conditions Causing Intergranular Cracking in High Strength Nickel-Copper Alloys—</b> M. E. NATISHAN AND M. WAGENHOFER	384
<b>New Perspectives on the Fracture of Nicalon Fibers—</b> S. T. TAYLOR, Y. T. ZHU, W. R. BLUMENTHAL, M. G. STOUT, D. P. BUTT, AND T. C. LOWE	393

#### FATIGUE

<b>Stress Ratio Effects on Crack Opening Loads and Crack Growth Rates in Aluminum Alloy 2024—</b> W. T. RIDDELL AND R. S. PIASCIK	407
<b>Stress-Level-Dependent Stress Ratio Effect on Fatigue Crack Growth—</b> R. SUNDER, W. J. PORTER, AND N. E. ASHBAUGH	426
<b>A Theoretical and Experimental Investigation of the Influence of Crack Tip Plasticity on Fatigue Crack Closure—</b> D. NOWELL, L. J. FELLOWS, AND D. A. HILLS	438
<b>Prediction of Plasticity-Induced Closure in Surface Flaws Using a Modified Strip-Yield Model—</b> S. R. DANIEWICZ	453
<b>Reflecting on the Mechanical Driving Force of Fatigue Crack Propagation—</b> M. LANG AND G. MARCI	474
<b>A Fatigue Crack Growth Theory Based on Energy Considerations: Further Developments on Small Crack Behavior and R Ratio Effect—</b> P. P. MILELLA	496
<b>Estimation of Crack Growth Behavior in a Residual Stress Field Using the Modified Strip-Yield Model—</b> C. -Y. HOU AND J. J. CHARNG	516
<b>An Analytical Model for Studying Roughness-Induced Crack Closure—</b> N. CHEN AND F. V. LAWRENCE	535
<b>On the Crack-Tip Blunting Model for Fatigue Crack Propagation in Ductile Materials—</b> I. GU AND R. O. RITCHIE	552

<b>Influence of Bauschinger Effect on Residual Stress and Fatigue Lifetimes in Autofrettaged Thick-Walled Cylinders—</b> A. P. PARKER AND J. H. UNDERWOOD	565
<b>Fatigue Durability Enhancement by Controlled Overloading—</b> S. M. TIPTON AND J. R. SOREM, JR.	584
<b>An Energy Based Critical Plane Approach to Multiaxial Fatigue Analysis—</b> R. ROLOVIC AND S. M. TIPTON	599
<b>Residual Stress Effects in Railroad Rail Fatigue—</b> G. T. FRY, H. L. JONES, AND S. L. JONES	614
<b>A Rapid Method for Generation of a Haigh Diagram for High Cycle Fatigue—</b> D. C. MAXWELL AND T. NICHOLAS	626
<b>Ultrasonic Pulse Transmit-Receiver Method for Detecting and Monitoring of Fatigue Damage—</b> I. MOSTAFA, S. HAILU, G. E. WELSCH, D. HAZONY, AND G. R. HALFORD	642
<b>Sustained Fatigue Crack Growth Oblique to an Applied Load Using Geometric Constraint—</b> M. A. MAGILL AND F. J. ZWERNEMAN	658
<b>An Evaluation of the Adjusted Compliance Ratio Technique for Determining the Effective Stress Intensity Factor—</b> J. K. DONALD, G. H. BRAY, AND R. W. BUSH	674
<b>The Use of Almost Complete Contacts for Fretting Fatigue Tests—</b> M. CIAVARELLA, G. DEMELIO, AND D. A. HILLS	696

#### STRUCTURAL APPLICATIONS

<b>High-Speed Civil Transport Hybrid Laminate Sandwich Fuselage Panel Test—</b> M. MILLER, A. C. RUFIN, W. N. WESTRE, AND G. SAMAVEDAM	713
<b>Prediction of Fatigue Life Under Helicopter Loading Spectra for Safe Life and Damage Tolerant Design—</b> P. E. IRVING AND R. G. BULLER	727
<b>Structural Loading and Fatigue Failure Analysis of Off-Road Bicycle Components—</b> D. S. DELORENZO AND M. L. HULL	743
<b>Mixed-Mode Fatigue Failure in Structural Adhesives—</b> E. SANCAKTAR	764
<b>Microstructure Evolution and Thermomechanical Fatigue Life of Solder Joints—</b> B. GOLDSTEIN, K. L. JERINA, S. M. L. SASTRY	786
<b>Fatigue Life Prediction of Resistance Spot Welds Under Variable Amplitude Loads—</b> N. PAN, S. D. SHEPPARD, AND J. M. WIDMANN	802
<b>Residual Strength Predictions for Multiple Site Damage Cracking Using a Three-Dimensional Finite Element Analysis and a CTOA Criterion—</b> D. S. DAWICKE AND J. C. NEWMAN, JR.	815
<b>Fracture Analyses of an Internally Pressurized Tube Containing an Axial, Through-Wall Crack—</b> B. W. LEITCH	830

<b>Fracture Analysis of Ductile Crack Growth in Weld Material from a Full-Thickness Clad RPV Shell Segment—</b> J. A. KEENEY AND P. T. WILLIAMS	851
<b>Ductile Crack Growth from Simulated Defects in Strength Overmatched Butt Welds—</b> O. S. NISHIOKA AND T. L. PANONTIN	862
<b>Predicting Extensive Stable Tearing in Structural Components—</b> R. J. DEXTER AND M. L. GENTILCORE	884
<b>Hydrogen Cracking During Service of High Strength Steel Cannon Components—</b> J. H. UNDERWOOD, E. TROIANO, G. N. VIGILANTE, A. A. KAPUSTA, AND S. TAUSCHER	897
<b>Indexes</b>	913
