Discussion	33

FOREWORD

The two papers and discussion appearing in this pamphlet were presented at the Nineteenth Session of the Fifty-seventh Annual Meeting of the American Society for Testing Materials held in Chicago, Ill., June 16, 1954.

The subject covered by these two papers is an extension of the Symposium held in 1953, and, they are being issued as a Supplement to the symposium on Lateral Load Tests on Piles Sponsored by Subcommittee R-10 on Bearing Tests of Soil in Place of Committee D-18 on Soils for Engineering Purposes. The committee feels that the two 1954 papers comprise a valuable addition to the symposium itself.

THIS PUBLICATION is one of many issued by the American Society for Testing Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the A.S.T.M. technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of A.S.T.M. publications and information on the work of the Society will be furnished on request.
