FOREWORD

This symposium, the sixth in a series of symposia on insulating oils sponsored by Subcommittee IV on Liquid Insulation of ASTM Committee D-9 on Electrical Insulating Materials, was presented during the meeting of Committee D-9 held in Cleveland, Ohio, in the Fall of 1954. The symposium which reports European developments in the testing of transformer oils consists of three papers reporting research on the subject in France, Sweden, and England.

The first two symposia were published in ASTM BULLETINS No. 146, May 1947, and No. 149, December 1947. The third, fourth, and fifth symposia appeared as ASTM Special Technical Publications Nos. 95, 135, and 152, respectively.

**NOTE.—The Society is not responsible, as a body, for the statements
and opinions advanced in this publications**

CONTENTS

	PAGE
Catalysts for Accelerated Aging Testing of Transformer Oil—Halvard Liander and Gosta Ericson.....	1
The Performance Characteristics of Used Insulating Oils—T. Salomon.....	24
The Evaluation of Inhibited Transformer Oils—R. Irving and D. W. Bravey.....	48
General Discussion.....	57

THIS PUBLICATION is one of many issued by the American Society for Testing Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
