Index

A
Aluminum coated steel
Advantages, 166, 174, 175
Disadvantages
Cut edge staining, 166
Coating weight, 166
Adverse effect on steel strength, 166
Aluminum-zinc-coated steel
New alloy evaluation
Salt spray test, 168
Atmospheric exposure, 168, 174
Corrosion mechanism, 180, 182
Effect of aluminum content on
Microstructure, 173
Performance in different envi­ronments, 171
Phase diagram, 172
Salt spray test, 170
Atmospheric exposure of plating systems
Stationary exposure, 127
Mobile exposure
Truck, 116
Tugboat, 117
Atmospheric exposure sites, ASTM Jurisdiction
Brazos River, Freeport, Tex., 107
Columbus, Ohio, 109
Detroit, Mich., 117, 121, 122
East Chicago, Ind., 85, 86, 90, 110
Kearny, N.J., 108
New York City (Newark, N.J.), 17
New York Harbor, 117, 121, 123
(not ASTM).
Panama Canal Zone
Coco Solo Naval Station, 60
Fort Sherman, 59
Point Reyes, Calif., 108
Wrightsville Beach, N.C., 100
Atmospheric exposure tests by com­mittees
Coated hardware, sheets, wire, 130
Corrosion of metals
Current programs, 135, 136, 138, 139
Die cast metals, 133
Electrodeposited coatings, 134
Iron-chromium-nickel alloys, 132
Light metals, 134
Malleable iron castings, 132
Nonferrous metals, 132, 133
Nonferrous screens, 135
Paints, 134, 135
Sandwich construction, 134
C
Copper
Accelerated atmospheric testing
Alloy evaluation, 159, 161
Apparatus, ACCT, 163, 164
Architectural finishes
Inorganic
Natural patinas, 153, 186
Synthetic patinas, brochantite, conditions, 153, 154
Test sites, 156
Organic lacquers
  Maintenance, 157
  Inhibited acrylic, 157, 158

Atmospheric corrosion
Environments
  Arid, industrial, marine, rural, 186, 187, 190, 194, 195
Contact resistance, 49
Diffusion transport, 49, 53, 54
Electrical contact corrosion, 48

Gold plating
  Grain size, 53
  Annealing temperatures, 50, 52, 53, 55
Grain boundary, 49

Laminar composites
  Copper-clad stainless steel, 190, 191, 197, 198, 200
  Rating system, 192, 193
  Galvanic pitting, 199
  Galvanic tunneling, 199
Metallic barriers for circuits
  Cobalt, 51, 53, 54
  Cobalt-phosphors, 52, 53, 56
  Chromium, 51, 53, 54
  Nickel, 51, 53, 54
  Nickel-phosphors, 52, 53
  Platinum, 51, 53, 54
  Rhodium, 51, 53, 54
  Tin-nickel, 51, 53, 54

Microcracked chromium, 118, 124
Microdiscontinuous chromium, 127

Exposure sites
Atmospheric parameters
  Cold sky, 9
  Dew formation, 10, 11
  Relative humidity, 7, 8, 10, 38
Characterizing, 12, 13, 15
Time-of-wetness meter
  Description, 6, 11, 15
  Detectors
    Gold-zinc, 15
    Platinum-zinc, 6, 7, 11, 15
Test panel
  Radiant emissivity, 11
  Wetness time, 7, 11, 15

Flamespraying (thermal spraying)
  Aluminum, 100, 103
Sealers
  Platinum, 51, 52, 54
  Chlorinated rubber, 102, 112
  Composition, 111, 112
  Zinc, 100, 103
Panel coating systems for
  Atmospheric exposure, 112, 113
  Seawater exposure, 113, 114
Specimen preparation
  Blast cleaning materials, 111

Galvanic corrosion
Atmospheric of
  Magnesium coupled with
    Aluminum, 21-26
    Brass, 21-26
    Cadmium plated steel, 21-26
    Carbon steel, 21-26
    Galvanized steel, 21-26
Monel, 21–26
Nickel, 21–26
Stainless, Type 304, 21–26
Zinc, 21–26
Mixed couples, including aluminum alloys, brass, carbon steel coupled with aluminum, brass, carbon steel, Monel, titanium, stainless Type 304

Results from
Atmospheric exposure, 61
Seawater immersion, 66, 67
Soil burial, 69

Results of similar couples
Atmospheric exposure, 69
Seawater immersion, 70
Soil burial, 69

Galvanic series based on
Galvanic couples with magnesium, 26

Test specimens of couples
Disk-type, 17, 18, 59
Plate-type, 59

Galvanized steel
Advantages
Atmospheric corrosion of
Skyward surface, 83, 92
Groundward surface, 83, 92
Performance, 166, 174, 175
Disadvantages, 166
High temperature performance, 166
Kinetic relationships, 84
Predictions of corrosion rates, zinc, 94, 95, 96
Reactions of
Basic zinc carbonate, 92, 93
Zinc, 92

Test sites for (see Atmospheric exposure sites)

Galvanized steel highway posts

Performance of test panels of
Hot-dip galvanized, 76
Continuous coated, 76
Electrogalvanized, 76
Painted galvanized, 76
Painted steel, 76

Results of
Visual examination, 79
Weight loss determination, 80
Service life anticipated, 82

Laboratory test environment
Controlled environmental exposure chamber, 30, 32
Dew-light cycle
Controls panel wetness, 38
Effect on “weathering steel” of
Sulfur dioxide, 31, 34
Nitrogen dioxide, 31, 34
Ozone, 34, 41, 42

Effect of gases on zinc, 42

Relationship between corrosion, time and temperature, 38, 39

Results of analysis of variance of “Weathering steel” in polluted air, 36
“Weathering steel” in clean air, 37
Zinc in polluted air, 44

Stainless steel
Atmospheric corrosion rate, 196
Polarization curves, 201
Summary of papers, 216
Z

Zinc (see Galvanized)
Atmospheric calibration (U.K.)
with dry cell cans, 205
Benefits from costing techniques,
214

Location of exposure sites, 206, 208
Report on national grid map,
206, 213
