Index

A
Altered resin batches, 9
Arrhenius plots, 49
AS/3501-6 graphite/epoxy, 4, 7, 9, 13
AS-1/3502 graphite/epoxy, 56, 58
ASTM Test D 790 (flexure), 55
ASTM Test D 2344 (interlaminar shear strength), 17, 54
ASTM Test D 2471 (gel time), 40
Autoclave cure process, 17, 30, 56, 97, 157

B
Boron trifluoride catalyst, 4, 11
Brominated epoxy, 39
B-stage epoxy resin, 38, 45, 50
Buckling load, 160

C
Carbonyl-containing epoxy, 4, 11
Celanese diallyl phthalate (DAP)/C6000, 158
Chemorheological characterization, 38, 50, 52
Consistency
   Manufacturing, 29
   Prepreg processing, 14, 15, 27
Crystalline thermoplastics, 120
Crystallization temperature, 121, 123
C-scan, 18, 21, 80, 81
Cure behavior, 48
Cure cycle variations, 18

D
Darcy’s Law, 104, 114
DER 332, 40
DER 511, 40, 52
DGEBA, 40, 41
Diaminodiphenylsulfone (DDS), 4, 7, 9, 11, 14, 98
Dicyandiamide (DICY), 39, 41, 45, 52
Differential scanning calorimetry (DSC), 39, 47, 49, 50, 120, 126, 158
Diglycidyl ether of tetrabromobisphenol A, 39, 40
Dimensional analysis, 97

E
Element mechanical property tests, 159
Exotherm peak temperature, 39, 49

F
Fabrication support materials, 30
Face tension test, 17, 21
Failure surface topography, 68
Fluid flow parameters, 27, 28
Fluid pressure, 30, 32, 34, 37
Fourier transform infrared spectroscopy (FTIR), 13, 120, 122, 126
Four-point shear, 54
G
Gas bubble pressure, 106
Gas pressure, 32, 34, 37
Gelation
   Energy of activation, 46, 49
   Onset, 35, 52
   Point, 46
   Temperature, 47
   Time, 34, 35, 38, 40, 43, 46, 48
Gel permeation chromatography (GPC), 23, 41, 52
Glass transition temperature, 39, 122
Gradients
   Pressure, 30, 32, 98
   Thermal, 30, 31, 36
Graphite/epoxy, 3, 4, 15, 17, 54, 55, 58, 96, 110, 157

H
Hackles, 68
Hardener, 24
Hat-stiffened panels, 159
Hexcel HX565/T300, 158
HPLC, 4, 23, 26, 40, 42, 52
HPLC test development
   Flow rate, 7
   Gradient/wavelength selection, 6
   Optimized test, 9
   Solvent selection, 6
Hydrostatic pressure, 98, 100

I
Imperfections, 75
Inflection temperature, 39, 47, 49, 50
Infrared spectroscopy, 23, 43
Interlaminar
   Failure modes, 54, 58, 61, 64, 67, 74
   Shear failure, 55
   Shear strength, 54, 58, 74, 167
   Voids, 15, 17, 21

L
Liquid chromatography, 4, 10, 12, 17, 23, 39, 40
Lognormal distribution/statistical data reduction, 59, 61, 64, 66

M
Major epoxy, 22, 24, 27
Mass spectrometry, 22
Melt temperature, 121-123
Metallography, 92, 93
Metal matrix composite materials, 80
Microstructure, 133
Minor epoxy, 23
Models
   Cure process variables, 110
   Laminate process behavior, 31, 32
   Manufacturing process, 37
   Numerical solution, 117
   Resin flow, 114
   Thermo-chemical, 111
   Void formation, growth, transport, 96
Modulus
   Loss, 34, 45
   Storage, 34, 45
   Modulus crossover point, 46, 48, 52

N
Narmco 5208 epoxy resin, 30, 47
NDI techniques
   Acoustic emission, 83, 92, 135
   Eddy currents, 81
   Ultrasonic attenuation monitoring, 83
   Ultrasonic C-scanning, 18, 21, 80, 81, 86
   Vibrothermography, 81
   X-ray radiography, 81, 90, 139, 151
   NEMA Grade FR-4 glass-reinforced epoxy resin, 39
Nondestructive evaluation/inspection of composites, 75, 76, 78, 92
Nondestructive inspection (see NDI techniques)
Novolac-type epoxy, 4, 9, 14
Nuclear magnetic resonance, 22

O
Onset temperature, 39
Out-time effects, 12

P
PEEK, 120, 121
PET, 120
Polybutylene terephthalate (PBT), 120
Polyester resin, 133, 158
Polyvinyl ether resin, 158
Porosity, 15, 17, 22, 24
Post-buckling compression fatigue, 160
PPS, 120
Prepreg
  Processing consistency, 14, 27
  Variations, 9, 15
Printed wiring board resins, 38
Processing science, 15
Process transformation diagram, 34, 37

Q
Quick-cure composites, 157

R
Resin deformation, 68
Resin matrix
  Advancement, 10, 26, 42
  Interaction, 11
  Out-time effects, 12
Resin microcracking, 68, 69, 149
Resin viscosity, 34
Rheology characterization, 34, 45, 50, 52
Rheometrics Dynamic Spectrometer, 17, 25, 39, 159, 165
Ryton, 121

S
Scanning electron microscopy (SEM), 55, 68, 91, 149
Screening test laminate, 17, 18, 28
Shear test
  Four-point (FPS), 54, 57, 64, 68, 74
  Short-beam (SBS), 17, 21, 54, 64, 74, 159
Sheet molding compound (SMC) composites (see SMC), 133
Short-beam shear, 17, 21, 22, 54
SMC
  Acoustic emission, 139
  Automotive applications, 133
  Damage growth, 141
  Mechanical behavior, 134
  Microscopic analysis, 139
  Microstructure variations, 134, 153
  Test methods, 135
Solvent/chemical sensitivity of thermoplastics, 120, 131
Span-to-depth ratio, 55, 58
Specification development, 15, 21, 27, 37
Stress concentrations, 57
Surface replication, 136

T
T-300/5208, 30, 99
Tan delta, 34, 35
Tetraglycidyl methylenedianiline (TGMDA), 4, 7, 10, 98
Thermoplastic matrix composites, 119
Thick-beams, 55, 61, 64, 74
Thin-beams, 55, 61, 74

U
Ultrasonic inspection, 17, 21, 25, 79

V
Vacuum-bag cure composites, 157
Viscosity
  Characterizations, 25, 34
  Profiles, 25, 27, 30, 35, 165
  Studies, 25, 34

Void
  Formation, 96, 100, 101, 105
  Pressure, 107
  Stabilization, 97, 100, 102, 105
  Transport, 96, 100, 103

W
Woven graphite composites, 158

X
X-ray diffraction, 120, 122
