Index

A
Asphalt-rubber, 3–12, 13–21, 22–38
Binder properties
   Elasticity, 4
   Temperature-viscosity, 4, 23, 24
   Viscosity, 7, 11, 19
Latex, 3
Processes related to
   Arizona refining, 14, 21, 23
   McDonald, 4, 13, 14, 21
Asphalt stabilization (see Foamix asphalt)
Asphalt stripping, 83, 89

C
Carbon black-asphalt, 110–128
Binder components
   Carbon black (pelletized), 111, 112, 125
   Dispersion of carbon black, 113, 125
   Maltenes flux oil, 111–113, 125
Binder properties
   Durability, 110, 114, 115, 125
   Temperature-viscosity, 110, 114, 116–118, 125, 128
   Wear resistance, 110, 114, 125
Field test sections
   Construction, 124–127
   Performance, 125
Mixture performance (laboratory)
   Low temperature cracking, 118, 122, 128
   Rutting (permanent deformation), 118, 122–124, 128
   Strength, 118–122
   Wear resistance, 118, 122
Chip seals (see Surface treatments)
   Crack sealing, 8, 11

F
Flush seal, 14, 15, 18, 96
Foamix asphalt, 93–109
   Binder properties
      Additives, 103, 104
      Interfacial tension, 95
      Viscosity, 94
Field test sections
   Construction, 96–99, 101
   Performance, 101, 102
Mixture characteristics
   Fatigue life, 100, 101
   Moisture sensitivity, 102, 103
   Temperature susceptibility, 106
Fog seals (see Flush seal)

H
Hveem mix design and testing
   Carbon black-asphalt, 111, 119
   Foamix asphalt, 105, 107
   Sulfur-asphalt, 55
   Hydrated lime, 83, 86
I
Incinerator residue, 79-92
Aggregate characteristics
Absorption, 81, 82, 91
Specific gravity, 81, 82
Field test sections
Construction, 84-87
Performance, 87-91

M
Marshall mix design and testing
Carbon-black-asphalt, 111, 119
Foamix asphalt, 105, 107
Incinerator residue, 82, 84-87, 91
Sulfur-asphalt, 44, 46, 55, 65
Miner's damage rule, 58

R
Reflection cracking
Expansion soils, 8, 11
Fatigue cracks, 3, 4, 11, 14-20, 25, 26
Joint cracks, 16, 17
Shrinkage cracks (soil cement), 14-19
Resilient modulus
Foamix asphalt, 105, 106
Sulfur-asphalt, 55, 64-77
Rostler parameters, 5, 6
Rubberized asphalt, (see Asphalt-rubber)

S
Schmidt resilient modulus device, 106
Schweyer rheometer, 7
Seal coats (see Surface treatment)
Stress absorbing layers
Membrane (SAM), 8, 9, 11, 13, 14
Membrane interlayer (SAMI), 8, 9, 11, 13-17
Mini-SAMI, 15, 16, 20
Sulfur-asphalt, (sulfur extended asphalt), 39-63, 64-78, 79
Binder properties
Dispersion of sulfur, 42
Specific gravity, 42, 43, 47, 48
Temperature-viscosity, 42, 46
Blending methods
Direct mixing, 41, 49, 50, 53-55, 61
Preblend, 40, 41, 49, 50, 54, 55, 61
Field test sections
Construction, 51-54
Performance, 55
Indirect tension test equipment
Retsina apparatus, 65-70
Waterloo apparatus, 65-70
Mixture characteristics
Poisson's Ratio, 64-77
Resilient modulus, 55, 64-77
Temperature susceptibility, 72, 73, 76, 77
Mixture performance (laboratory)
Fatigue cracking, 57-59
Present serviceability index, 59-60
Rideability, 56, 57
Rutting (permanent deformation), 56
Processes, related to
Gulf Canada, 40
Pronk, 40, 41
SNEA, 40, 52, 54
U.S. Bureau of Mines, 41, 53, 54
Safety, 51
Volume substitution ratio, 44-49, 58, 59, 71
Surface treatments
Asphalt-rubber binders, 5, 8, 13-17, 24-37
Quantity of binder, 9, 10, 31-37
Quality of cover aggregate, 32-37
