Foreword

The papers in this volume were presented at the Symposium on Analytical Techniques as Applied to Hydraulic Cements and Concrete, held on June 15, 1965, during the Sixty-eighth Annual Meeting of the Society, at Lafayette, Ind. The symposium was sponsored by Committee C-1 on Cement, with W. C. Hansen, consulting chemist, serving as chairman of the symposium committee.

Contents

Introduction—W. C. HANSEN.....	1
Methods Used in Petrographic Studies of Concrete—B. ERLIN.....	3
Discussion.....	17
Use of Infrared Spectrophotometry for the Detection and Identification of Organic Additions in Cement and Admixtures in Hardened Con- crete—W. G. HIME, W. F. MIVELAZ, AND J. D. CONNOLLY.....	18
Quantitative X-ray Diffraction Measurements by Fast Scanning—R. L. HANDY.....	30
Discussion.....	44
Substitution of Alkali Oxides in Tricalcium Aluminate—D. E. DAY.....	48
Determination of Acetate Additions in Cement by Gas Chromatography— A. S. WEXLER.....	58
Discussion.....	64
Application of Spectrophotometric and EDTA Methods for Rapid Analysis of Cement and Raw Materials—Z. T. JUGOVIC.....	65

THIS PUBLICATION is one of many issued by the American Society for Testing and Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
