

## Subject Index

## A

Accelerated notched constant load testing method, 95  
 Adsorption curves, 125  
 ASTM standards  
   general, 37  
   D-1693 -- Test Method for Environmental Stress Cracking of Ethylene Plastics, 95  
 Axi-symmetric tension testing, 170

## B

Barrier performance testing, 3  
 Brittle failure analysis, 132

## C

Chemical compatibility testing, 37, 57, 197 (see also Geomembrane testing and Geotextile testing)  
 Chemical exposure, 3, 12  
 Chromatography techniques, 12  
 Compressible subgrade materials, 170  
 Constant tensile load testing, 132  
 Construction parameters  
   design factors, 241, 299, 355  
   engineering requirements, 132, 155, 285  
   materials selection, 12, 25, 197, 225  
   stability requirements, 185, 241  
   test methods, 155, 170, 369  
   welding methods, 143  
 Crack growth rates, 132

## D

Desorption curves, 125  
 Destructive testing methods, 143  
 Dimensional variability, 225  
 Direct shear testing, 155, 241  
 Ductile-to-brittle failure, 95

## E

Environmental degradation, 12  
 EPA Method 9090, 25, 37, 110, 197  
 EPA requirements, 3, 225, 299

## F

Filtration performance testing, 273, 285, 299  
 Fingerprinting methods, 3, 12  
 Flexible membranes, 25, 75, 257

## G

Geogrids, 3, 197  
 Geomembranes  
   high density polyethylene covers, 170, 355  
   high density polyethylene liners, 25, 37, 110  
   low density polyethylene liners, 170  
   polyethylene liners, 95, 125, 143  
   polyethylene seams, 132, 143  
 Geomembrane testing (see also Geotextile testing)  
   chemical compatibility, 25, 110  
   chemical resistance, 3, 12  
   crystallinity, 95, 125  
   degradation rate, 212  
   diffusivity, 75, 125  
   durability, 12, 132, 143  
   elasticity, 25, 37, 57, 170  
   erosion control, 197  
   filtration, 170  
   permeability, 75, 125  
   radiation, 110  
   strength, 132, 143, 155  
   stress analysis, 3, 57, 95  
   tension, 132, 170  
   transmissivity, 74  
 Geonets, 3, 197

- Geotextiles  
   continuous filament  
     liners, 273  
   nonwoven filters, 197, 313  
   nonwoven liners, 185, 257,  
     285, 335  
   polyester needlepunched  
     fabrics, 212  
   PVC liners, 369  
   woven liners, 257
- Geotextile testing (see also  
   Geomembrane testing)  
   biological filtration, 285,  
     299, 313  
   chemical compatibility, 197,  
     212, 225  
   chemical resistance, 3, 12,  
     212  
   clogging behavior, 285, 299,  
     313  
   conductivity, 257  
   crystallinity, 212, 335  
   drainage, 3, 257, 285  
   durability, 185, 212, 225,  
     335  
   method assessment, 197  
   particulate filtration, 257,  
     273, 285  
   permeability, 197, 299  
   slurry performance, 273  
   stress analysis, 257, 335  
   thermal degradation, 335  
   transmissivity, 197, 257
- H
- Hydraulic conductivity, 197,  
   212, 257  
 Hydrostatic pressure testing,  
   155, 170
- L
- Landfills  
   aquifer contamination, 369  
   cover designs, 241, 355  
   gas exposure, 369  
   hazardous waste sites, 37,  
     225, 241  
   leachate collection, 285  
     (see also Leachate  
       collection systems)  
   loading requirements, 170  
   municipal waste sites, 299,  
     313, 335, 369
- Leachate collection systems  
   design parameters, 3, 285  
   filtration performance,  
     299, 313  
   industrial wastes, 25, 37,  
     75
- Long term testing methods,  
   132, 299
- M
- Microstructural analysis,  
   12, 37, 132
- Municipal waste facilities,  
   225, 241
- O
- Oxidation properties, 12, 57
- P
- Piping systems, 3, 132, 197,  
   285
- Polymer test methods, 12,  
   57, 143
- Pyramid puncture tests, 185
- R
- Radiation compatibility  
   testing, 110
- Reservoirs, 170
- Resource Conservation and  
   Recovery Act, 241
- S
- Short term testing  
   methods, 143
- Solvent swell testing, 125
- Spectroscopy techniques, 12
- Subsurface contamination,  
   285
- T-W
- Tensile strength testing,  
   143, 155, 170
- Thermal analysis techniques,  
   12, 125, 335
- Waste disposal site  
   construction, 185
