Cumulative Index

The Roman numerals printed in boldface type refer to the particular symposium in the series of solid waste testing symposia. The First Symposium (I) is reported in STP 760,\(^1\) II in STP 805,\(^2\) III in STP 851,\(^3\) IV in STP 886,\(^4\) V in STP 925,\(^5\) and VI in STP 933.\(^6\)

Subject Index

A

Acid precipitation, III 61-63
Adsorption, II 111–126, 173, 237–240, 265–282; III 186–188; VI 120–150, 391–408
Aerial Surveys (see Remote sensors)
Air testing (see Gases)
Algal culturing, III 230–247
Aluminum anodizing waste, II 89–107
Ambient air (see Gases)
American Foundrymen’s Society leaching test (see Foundry wastes and Batch leaching)

Ames test (see Mutagenicity)
Analysis (see also Organic constituent groups, Heavy metals sampling, Quality control)
aging, VI 204
atomic absorption spectroscopy (AA), I 44, 63, 86, 152, 171, 225–266; II 69, 73, 92, 129, 222–224, 240; III 64; V 103–123; VI 277
basic considerations, I 23–24; II 183
calculations, VI 259–260
combustion bomb, IV 66
document control, V 67–73

electroanalytical, VI 276
flesh, I 327; III 11-23
gases, II 115; III 29-30, 157; IV 80-82, 106-120
gel permeation chromatography, V 201
high performance liquid chromatography, II 11-13
inductively coupled plasma spectroscopy (ICP), I 44, 225-266; II 129; V 103-123; VI 257-272, 276
infrared spectroscopy, IV 139-161
interferences, VI 257-272
ion chromatography, I 171; IV 66, 305
mass spectroscopy (see GC/MS under Analyses)
matrix, VI 257-272
neutron activation, I 171; II 69, 73; VI 276-277
oil, III 156-157; IV 7-14
organic carbon, II 145
photon activation, VI 276-277
preparation (see Separation)
quality control (see Quality control and quality assurance)
sample preparation (see Separation)
screening analysis, I 240-266; III 42-47; IV 139-161
selective ion electrodes, III 64
separation and extraction, I 45, 63, 243-248; II 11, 184, 196-198, 205-207; III 92-99, IV 7-14, 140-141, 180, 206-207; VI 258-263, 277-292
standards, V 85-102, 143-197
thin layer chromatography, II 11; IV 207-208
wet chemical tests, I 63, 171, 310; II 159
X-ray and X-ray fluorescence (XRF), I 153; II 215-218; IV 123; VI 263, 276
Aquatic organisms (see also Bioassay, III 5-23)
Arsenic (see also Heavy Metals), III 54-55; VI 391-408
Atrazine, II 111-126
Attenuation (see also Adsorption), I 139-149, 337-341, 360-362; II 111-126, 152-167, 241, 261-282; III 185-191; VI 391-408
Atterberg limits (see Geotechnical testing)

B

Bacterial counting, II 115
Baghouse dust, I 42-60, 251-263; II 53-66, 127-140
Barriers, IV 273-284
Batch leaching (see also Fixed wastes)
American Nuclear Society test, III 48-60
basic considerations, I 22-23; VI 7-27, 268
butyrate, I 46
Canadian data base, II 53-66
carbonic acid, I 17-18; II 127-140; IV 22-55
citrate, I 45; II 141-151; III 218
contact conditions, I 8-14, 23, 69-72, 84-135; VI 19
diffusivity model (see Models)
early tests, I 17-19
elutriation (washing), I 186-200
environment Canada procedures, II 53-66, 128; III 57-60; VI 63
extractant ratio, I 22, 84-98, 112-135, 340; II 53-56; IV 22-55; VI 21
extractant renewal, III 48-60; IV 22; VI 19-21
Foundrymen’s test, I 9, 201-214; II 53-88, 136; VI 28-44
French test, VI 11
Illinois test, I 10-11
intrinsic properties, VI 63-78
IU Conversion Systems test, I 10-12
Japanese test, I 8; VI 11
local ground water, VI 303
method comparison, I 7-19, 28-39, 41-60, 63-69, 83-98; II 53-88, 127-151; IV 15-55; VI 7-44
Minnesota test, I 10-12, 28-39
models (see Models)
multiple waste addition, I 170
oily wastes, IV 83; VI 268
organic extractants, I 240-266; II 11, 197, 203-213; III 92-99
pH, VI 14-18, 32-33
purposes, I 19-20, II 111-112, 139, 142; VI 268
redox, I 72-74, 337-339; IV 23; VI 263
serial extraction, I 9, 23, 74-80, 99-111; II 127-140; III 48-60; IV 22-35; VI 19-21
site soil, I 99-111; II 10-14; III 92-99
site specific, I 331-344; VI 303
solidified waste (see Fixed waste)
storage effects, II 89-107
surfactant, I 46
synthetic landfill leachate, II 53-66
USA Corps of Engineers test, I 333-335
variability, VI 385-387
West German test, VI 10
Wisconsin test, I 11-15, 169-170
Benzene, III 32-33
Bioassay (see also Toxicity), I 327, 358-362; II 299-320; III 11-23; IV 176-191, 192-229
Bioconcentration (see Concentration factor)
Biodegradation, II 111-140; III 135-151; IV 176-191; VI 151-173, 319-333
Biogas, III 248-277
Biological sampling, III 5-23
Biological sludge, I 29-38, 42-60, 244-249, 251-263; II 141-151, 199, 209; III 391-392; VI 273-292
Biological treatment (see Biodegradation, Bioreclamation)
Bioluminescence assay, IV 176-191
Bioreclamation, VI 161-173
Boiler combustion (see Incineration)
Bottom ash (see Boiler ash)
Bromophenol, VI 308-316
Cadmium (see also Heavy metals), III 118-132; VI 391-408

Canadian leaching data base, II 53-66

Caps (see Closure)

Cations
   exchange capacity (CEC), II 52-67, 235; VI 218-219
   mobility, III 81-91; VI 216-219

Cementation (see Fixed wastes)

Cement kiln (see Incineration)

CERCLA (Superfund), II 1, 7; V (entire)

Chemical plant waste, I 42-60, 220-224, 251-263; II 136, 141-151, 184, 193-202, 199, 209; III 92-99, 299-300; IV 301-313; VI 257-272

Chemosorption, II 174

Chloride, VI 93-103, 220-221

Chlorine production brine waste, I 139-150; III 302

Chromium waste (see also Heavy metals and Metal finishing waste) III 61-80, 171-192, 278-288

Closure, II 283-295, VI 203-205

Coal (see also Boiler ash), II 24-37; IV 88

Coal conversion wastes, II 141-151

Co-disposal industrial and municipal wastes, I 10-14, 139-150, 187, 339; II 111-140, III 152-170, 193-212; IV 15-55; VI 45-62

Coke waste, IV 205

Column leaching
   analytical, II 220-221
   anoxic, IV 15-55; VI 55-61, 380
   application rate, I 85; IV 15-55
   co-disposal, I 139-150; II 111-126; III 153-165, 193-212; IV 15-55; VI 45-62

   comparison with batch, I 83-98, 139-150, 164-185; II 127-151; IV 15-55, 254-255; VI 384-388
   concentration histogram, II 240-244
   early studies, I 8
   fly ash, VI 379-385
   liner migration, VI 208-225
   large-scale, I 139-150; III 193-211; IV 15-55
   Ontario column leach test, II 127-140
   penetration theory, II 127-140; VI 221-224
   recirculation, III 62-64; VI 46-48
   simulated landfill, II 111-126; IV 15-55; VI 45-62, 375-379
   solidified waste (see Fixed waste)
   unsaturated flow, II 127-140
   variability, VI 385-387
   Combustion (see Incineration)
   Concentration factor, II 276-278, 318-319; III 5-23
   Cone penetrometer (see Geotechnical testing)
   Corrosivity, I 352-353; VI 430-432
   Cyanides, II 53-66; IV 54-63, 106-120; V 103-107
   Cyclohexanone, II 41-49
   Cytotoxicity, IV 204-215

D

Damage, III 334-345

Data handling, VI 104-119

Delisting, I 345-365

Detector tubes, IV 106-120

Diadochy (elemental substitution), II 75

Dichlorobenzene, VI 140-150

Dichloroethylene still bottoms, IV 15-55

Dichlorophenol, VI 140-150
Diffusivity, III 48-60; VI 98-103, 221-224
Digestion, III 248-277
Dioxins, IV 261-262; V 124-142
Dispersion, IV 221-224
Dredge spoil, I 8-9, 333-335
Dyes, III 297-298

E
Earthworms, II 313-320; IV 192-203
Effective cation exchange capacity (ECEC) (see Cation exchange capacity)
Egyptian practices, III 305-319
Electromagnetic induction (see Remote sensors)
Electroplating waste (see Metal finishing waste)
Encapsulation (see Fixed waste)
EPA toxicant extraction procedure (EP) (see Batch leaching and Toxic characteristic leaching procedure)
Equivalent facility performance, I 347-350
Equivalent testing methods, I 347-350
European practices, III 373-393
Explosives waste, I 305-320
Explosivity, VI 93-103
Exposure assessment (see Hazard assessment)
Extraction (see also Batch leaching, Column leaching), II 11, 197, 203-213; III 48-60, 92-99; IV 7-14, 140-141, 180, 206-207
Extraction Procedure (EP) (see Batch leaching)

F
Fabrics, II 283-295
Fate (see also Hazard assessment), I 341, 361-362; II 111-126; III 81-91; IV 165-175
Fatty acids, II 115-116
Fertilizer wastes, III 294-295, 299
Field and large-scale studies (see also Sampling)
aquatic organisms, III 5-23
chemical waste, I 321-327
closure, II 283-295
co-disposal, I 139-150; IV 15-55; VI 45-62
dredging waste, I 373
electroplating waste, I 305-320
fly ash, I 164-185
foundry waste, I 201-214; VI 28-44
gases, III 24-41
ground water flow, I 294-298, 307-309; III 177-185
liners, I 290; VI 93-103
metal finishing waste, I 195-199, 305-320
mining waste, I 201-214
municipal wastes, VI 93-103
oily waste, III 135-170; IV 285-297
pulp and paper waste, I 151-163
steel mill waste, III 171-192
wood preserving waste, II 7-23
Fish testing (see Bioassay)
Fixed wastes
acceptance tests, IV 263-272
brine, IV 263-272
cement, VI 79-90, 295-307, 308-316
chemical properties, IV 84; VI 70
cement, VI 79-90, 295-307, 308-316
cone penetrometer, IV 263-276
cone penetrometer, IV 263-272
closure, II 170-172
EPA programs, IV 83-84, 257-258
fly ash, II 220; III 100-117; VI 295-307
grout, VI 295-307
hydrofracture grout, VI 295-307
intrinsic properties, VI 63-77
leachate renewal, III 48-60
leaching batch, I 9; III 48-60, 215-218; VI 68-77, 87-89, 303
leaching column, III 135-136, 220; III 215-218; VI 81-87
leaching model, III 49-60
limestone scrubber solids, VI 295-307
mechanisms, II 168-177
metal wastes, III 213-229; VI 79-90
microscopy, VI 308-316
models, VI 71-76, 86-87
morphology, VI 70
organic effects, VI 308-316
particle size VI 80-81
paste, VI 80-81
PCBs, VI 295-307
pesticides, VI 295-307
physical properties, VI 70, 308-316
pickling liquor, VI 295-307
silicate based, III 328-329
steel wastes, II 135-136
unconfined compressive strength, IV 263-272
vicat needle, IV 263-272
Flame extinguishability, IV 90-103
Flame propagation, IV 90-103
Flammability (see Ignitability)
Fly ash (see Boiler ash)
Food processing waste, I 244-263; III 230-259; 316-317
Foundry wastes (see also Slags, Smelter discharges), I 9, 203; II 53-88, 136; VI 28-44
Free liquid, VI 409-416

G

Gas chromatography and mass spectroscopy (see Analyses)
Geotextiles (see Fabrics, Liners)
Glass etching waste, I 139-150
Ground penetrating radar (see Remote sensors)
Ground water (see also Sampling and preservation and Field and large-scale studies)
  monitoring, V 21-34
  treatment, VI 151-173
Grout barriers (see Barriers)

Hydraulic conductivity (see Geotechnical testing)
Hydrocyanic acid (see Cyanides)
Hydrogeology (see Field and large-scale studies, Geotechnical testing, Sampling and preservation)

H
Halogenated compounds (see also PCBs, Pesticides, and Specific compounds), I 250-255; II 188-191, 265-282; IV 64-76, 303-304
Heat of combustion (see Incineration)
Heavy metals (see also Analysis)
  analysis, I 225-237, 248-249; II 214-228; IV 121-138; V 85-123; VI 257-272
  attenuation and retardation, II 231-245; III 185-212, 213-229; VI 50-62, 212-216
  gaseous, III 30
  leachability, I 32-38, 43-60, 63-81, 86-214; II 53-107, 127-140, 214-228; III 54-57, 105-117
  sediments and sludges, I 313-314; II 287
  soil sampling program, V 57-66
  sulfide precipitation, VI 54-61
  toxicity, II 313-320; IV 192-203
Herbicide waste (see Pesticide waste)
Human exposure assessment (see Hazard assessment)

Ignitability, I 350-352; IV 95-105; VI 431
Illinois Environmental Protection Agency leaching test, I 10-11
Immobilization (see Fixed wastes)
Immunotoxicology (see also Toxicity), IV 216-229
Impoundment, II 231; III 329-330; IV 258-261; VI 195-207, 343-366
Incineration (see also Incinerator ash)
  boilers, VI 180-191
  cement kiln, VI 181-191
  heat content, IV 310; VI 265
  high-intensity combustion, IV 328-334
  performance, VI 177-191
  stack monitoring, IV 80-82
  test burns, IV 314-334; VI 181
  volatile organic sampling train (VOST), IV 80-82, 335-343; VI 179-180
  waste characterization, IV 301-313, 322
Incinerator ash, I 29-38; IV 17, 36-55
Indian practices, III 291-304
Ink pigment waste, I 42-60, 251-263
Interpretation of results (see Hazard assessment)
Interstitial water quality (see Geotechnical testing)
Iron waste (see Steel mill waste)
INDUSTRIAL AND HAZARDOUS WASTE

IU Conversion Systems leaching test, I 10-12

L
Laboratory wastes, VI 417-425
Land application, VI 273-292
Land treatment, III 135-151; IV 7-14, 176-203, 285-297; VI 268-269
Landfill (see Closure, Simulated landfill, Liners, Field and large-scale studies)
Leachate migration, VI 208-225
Leachate treatment, VI 45-62, 151-173
Leaching (see Batch leaching, Column leaching)
Lead (see also Heavy metals), IV 121-138
Limestone slurry treatment sludge, I 244-263; VI 295-307
Lindane (see Pesticide waste)
Liners, I 341, 350; III 325-326
   clay and soil, I 269-292, II 231-282; IV 233-250, 255-256; VI 93-103, 208-239
   flexible membrane, I 269-292; IV 256-257; VI 195-207
Liquid underground storage tanks (see Underground storage tanks)
Listing of hazardous wastes, I 355-358
Lysimeters (see also Column leaching), I 153; III 188; IV 19-22; VI 28-30, 343-352, 387

M
Magnetometry (see Remote sensors)
MCPA pesticide, II 111-126
Metal detection (see Remote sensors)
Metal finishing waste, I 139-154, 186-200, 251-263, 305-320;
   II 53-66, 89-107, 135; III 213-229, 278-288; IV 17
Metals (see Heavy metals, metal finishing waste)
Methanethiol, III 35
Methylethylketone (MEK), II 41-49
Methylisobutylketone (MIK), II 41-49
Microcoulometry (see Incineration)
Microcosms and mesocosms, II 310
Micro-tox assay (see Bioluminescence assay)
Migration (see also Fate), II 111-126, 152-167; VI 208-225
Mining waste, I 199-214; II 53-66, 127-140, 231-245
Minnesota Pollution Control Agency leaching test, I 10-12, 28-39
Models
   biological treatment, VI 326-331
diffusivity, III 49-52; VI 98-103
   leaching, IV 29; VI 65-67, 72-74
   liner migration, VI 221-224
   migration, III 81-85; VI 98-103, 208-225
   soil loading, III 126
Monitoring (see Ground water)
Monitoring wells (see Wells)
Municipal waste (see also Co-disposal), I 275-277; II 220; III 18, 193-212, 260-277
Mutagenicity (see also Toxicity), IV 204-229

N
National programs
   Egypt, III 305-319
   Europe, III 373-393
   India, III 291-304
   Thailand, III 346-360
   United Kingdom, II 111-112
   United States of America, III 321-345
Nitrogen, VI 289

Octanol-water partitioning (see Concentration factor)
Odors, III 24-41
Oily waste, I 17, 220-224; II 53-66, 137, 184, 193-202, 209; III 135-170; IV 7-14, 17, 36-55, 83, 88, 182, 205, 287; VI 257-272
Organic constituent groups (see also Analysis)
clean-up, I 243-248; II 184, 196-198, 207
dioxin (see Dioxins)
extraction (rapid), III 92-99
gaseous, III 24-41
halogens (see Halogenated compounds)
leachability, I 43-59; II 111-126, 141-151
RCRA Appendix VIII compounds, IV 78-80; VI 338
resin adsorption, II 145
semivolatiles, I 44, 240-266, 323-327; II 203-213; IV 143-172
surrogate screening, I 217-224
volatiles, I 44, 217-224, 242-266, 323; II 39-41, 193-202; III 43; IV 206-207; V 173-197
Organic still bottoms (see Chemical plant wastes)
Oxidation-reduction potential, I 72-74, 337-339; IV 23; VI 263-380

Passivation, II 174-175
Penetrometers (see Geotechnical testing)
 Pentachlorophenol, VI 120-139, 295-307
Permeability and permeameters (see Geotechnical testing)
Pesticide waste, II 111-126, 210, 276; III 296-297; IV 140-141, 205; V 148-152, 198-212; VI 295-307, 438-440
Petrochemical waste (see Chemical plant waste)
Petroleum waste (see Oily waste)
Pharmaceutical waste, I 42-60; II 141-151
Phenolics, II 8-22, 137, 210; VI 120-150, 295-307
Phosphorous, VI 288-289
Phosphorous production waste, II 53-66; III 294-295
Pickle liquor, IV 68; VI 295-307
Piezometer (see Sampling and preservation, Geotechnical testing)
Pigment (see Paint waste)
Pirimiphos-methyl, II 111-126
Plant uptake, III 118-132, 135-151; VI 273-292
Plastics wastes (see Chemical plant wastes)
Plating waste (see Metal finishing waste)
Polychlorinated biphenyls (PCBs), II 53-66, 185-188, 267; III 12-23; IV 64-67, 170; V 148-152, 198-212; VI 295-307
Polynuclear aromatics (PNAs), II 8-22
Poly(vinyl chloride pipe), II 38-50
Precipitation, II 175-176; VI 212-216
Pulp and paper waste, I 151-163; II 141-151
Purposes of testing, I 1, 20-21; III 42-43

Quality control and quality assurance
chain of custody, V 67-73
contract laboratory evaluation, V 74-102
data base, VI 104-119
dioxin analysis, V 124-142
document control, V 67-73
drilling procedures, V 3-10
extraction and leaching, I 23-24, 113-116; II 12-16
inorganic analyses, II 165; IV 136-138; V 31-32, 85-123
kriging, V 43-56, 62-65
monitoring ground water quality, V 21-56
organic analyses, II 223-224; V 31-32, 85-102, 143-197
PCBs, V 148, 152, 198-212
pesticide analyses, V 148, 152, 198-212
soil sampling, V 10-12, 35-66
spatial structure, V 43-66
waste sampling, II 35-36, 68
well construction, V 3-16, 22
well design, V 11-16

Resource recovery (see Waste utilization)
Retardation (see Attenuation)
Risk analysis (see Hazard assessment)
Rule-making changes, I 345-365

Safety, VI 354-356, 426-442
Samples
classification, VI 419
disposal, VI 421-425
treatment, VI 420-421
Sampling
air (see Gases)
aquatic organisms, III 10-12
backhoe, I 204
basic considerations, I 21-22; II 8-9; VI 332-339
bottom ash, II 24-37
coil, II 24-37
design, VI 357-360
fly ash, II 24-37
gases, I 327; III 24-28
groundwater, II 38-50; V 16-19, 21-56; VI 337-342
impoundments, VI 353-366
interstitial water, I 153, 167-169; II 111-126; III 197-198
leachate, I 143, 153, 324, 327
safety, VI 354-356
scrubber sludge, II 24-37
soil, I 165, 167, 204, 218-219, 307-308; II 8-12, 16-22; IV 123-138, 285-297; V 10-12, 35-66
soil gas, VI 344
storage effects, II 89-107; VI 264, 341
variability, VI 357-360
wastes, I 11; III 42-43; VI 353-366
wells, I 167-168, 204, 307-309; II 38-50; V 11-16; VI 341
Scrubber sludge, II 24-37
Sediments, II 286-287
Seismic refraction (see Remote sensors)
Silicates, III 213-229
Simulated landfill (see also Column leaching), II 111-126; III 153-154; IV 15-22; VI 45-62, 208-212, 377-379
Slags (see also Foundry wastes), I 17; III 61-80, 301-302
Sludges (see Biological sludge and Chemical plant waste)
Smelter discharges, II 53-66; V 57-66
Soil (see also Analysis, Batch leaching, Extraction, Sampling, Field and large-scale studies, and Geotechnical testing)
adsorption, VI 120-150, 391-408
cation exchange capacity (see Geotechnical testing)
cation mobility, III 81-91
extraction, III 92-99, V 149, 158-160, 178, 186-188, 203
index (see Geotechnical testing)
lead, IV 121-138
liners (see Liner testing)
loading, III 118-126
oil, IV 7-14
pH, VI 120-130
sample preparation, IV 123
toxicity, II 313-320; IV 192-203
Solidified waste (see Fixed waste)
Solids separation, III 364-372
Solvent still bottoms, IV 15-55, 88
Sonication, I 219; II 205, 208
Sorption (see Adsorption)
Soxhlet extraction, II 11, 206-207; III 96-99; IV 7-14
Stability, II 294
Stabilized waste (see Fixed waste)
Stack gases (see Incineration and Gases)
Standard Leach Test (U. Wisconsin), I 11-12, 15, 169-170
Statistical considerations (see Quality control and quality assurance)
Steel mill wastes (see also Pickle liquor), III 171-192, 300-301, 316, 361-373; VI 7-27
Storage, VI 426-442
Styrene, IV 88-89
Subsurface sensors (see Remote sensors)
Sulfur compounds, VI 265-269
Superfund (see CERCLA)
Surface impoundment (see Impoundment)
Survey analysis (total content), I 240-266; III 42-47

Tars (see Oily wastes)
Tensiometer, VI 343-352
Teratology (see also Toxicity), IV 216-229
Tetrahydrofuran, II 41-49
Textile waste, IV 87-89
Thailand practices, III 346-360
Total organic halogens (see Halogenated compounds)
Toxic characteristic leaching procedure (see also Batch leaching), IV 15-55, 82
Toxicity (see also Bioassay and Mutagenicity), I 341, 352-360; II 299-320; IV 176-229
Trinitrotoluene, I 305-320
U
Underground storage tanks, VI 343-352
United Kingdom practices, II 111-112
U.S. Army Corps of Engineers elutriate test, I 8-12, 333-335

V
Vapors (see Gases)
Vicat needle (see Geotechnical testing)
Viscosity, IV 310
Volatile organic compounds (see Organic constituents)

W
Waste management, III 291-319, 346-360, 373-393; VI 417-425
Wastewater treatment sludge (see Biological sludge)
Water determination, III 95; IV 307
Wells (see also Sampling and preservation)
decontamination, V 16-19
design, V 11-16
drilling, V 3-10
grouting, V 15-16
materials, V 11-15, 22
Wood preserving waste, II 9-22; IV 182
Worms (see Earthworms)

Z
Zinc sulphide residue, II 53-66
