Subject Index

A
Accelerated corrosion, 205(fig)
Accelerated growth, 658–665, 667–675(figs), 676(table)
Accelerated irradiation growth
Zircaloy-4 fuel rods, 658–677
Accelerated oxidation, 513–514
Acicular structures, 386–387, 466
Activation energy, 171(fig), 442–444
Advanced Test Reactor (ATR) radiation exposures, 247
Advanced water breeder applications program tests (AWBA), 268
Aging
effects on beta-quenched zircaloy-4, 453(table), 454–456(figs), 458–461(figs), 470
Alkali dissociation, 187–201, discussion, 735
Alloying elements
Zircaloy-2, 347–348, 353(figs), 355–357(figs), discussion, 744
zirconium, 665–666
See also Chromium, Iron, Nickel, Niobium, Tin
Alpha-zirconium diffusion of transition elements, 436–448(figs, tables)
discussion, 751
Alumina polishing
effect on oxidation rate, 513
Aluminium compression properties, 583
Analytical transmission electron microscopy (TEM), 216
Anisotropic creep behavior, 587–591, 597, 644
Anisotropic deformation model, 623
Anisotropic diffusion, 676(table)
Anisotropic mechanical properties, 584(table)
Anisotropy parameters
microstructures, 693, 719
temperature, 717, 720
textures, 571, 574–577, discussion, 756
thermal creep, 629–632, 633–634(table, figs), 639
Anneal hardening, 559–560, discussion, 754
Annealed Zircaloy, 674(fig)
Annealing parameters accumulated, 203–204, 211
beta-quenched zircaloy-4, 453, 464–466, 468(fig), 470–472(figs)
corrosion, 337–338, 349, 351, discussion, 743
heat treatment combinations, 130(table), 135
intermetallic precipitates, 421
post irradiation, 644
Annealing treatment
beta-quenched zircaloy-4, 472–475(figs)
scale growth, 382
Anodization curves, 250–251
Argon-ion etching, 507
Arrhenius behavior, 436, 443(fig), discussion, 751
ASME Boiler and pressure vessel code, 35
ASTM specifications
B 353, 5(figtn), 621
E 8, 625
E 139, 625
E 399, 736
E 813, 45, 85
E 1152, 71
G 2, 115, 145
UNS R 60804, 550
Atom probe specimens
electropolishing procedure, 427
Atom probes, 424–426, discussion, 749
Auger analysis of oxidized zirconium alloys, 498–514
Autoclave corrosion data, 231, 232(figs), 322(table)
Autoclave hydriding, 153–164 discussion, 732
Autoclave tests
chemical composition influences
Autoclave tests—Continued
on Zircalloys, 335–338,
discussion, 743
corrosion, 428–429(fig), 432
discussion, 749
corrosion performance rankings system
designs, 318–320(figs)
corrosion tests by atom probes, 426–428,
430(table),
discussion, 749
effect of oxygen on corrosion, 206(fig)
hydrogen pickup, 233, 234(table)
in steam, 132(fig), 137(fig)
weight gains of cladding materials spec-
imens, 326–332(figs), discussion, 742
Zircaloy-4 cladding, 151
Zircaloy-4 tubing, 128–140, discussion, 731
Zircaloy claddings—corrosion, 180 (ta-
ble)
zirconium-base alloys, 113–127, discus-
sion, 730
Autoclaved claddings. See Claddings.
AWBA. See Advanced water breeder ap-
plications
B
Behavior of thick/thin films, 14–18
Behavior of Zircaloy in reactors, 21–
23(figs), 266
See also Hydriding
Beta-quenching
oxidized zirconium alloys, 512–513
Zircaloy-4, 452–458(figs), 467(fig), 470–
471, 475
See also Quenching.
Bettis laboratory tests
Zircaloy clad fuel rods, 267
Biaxial creep, 585–586(fig), 597, 612,
613(fig)
Binary alloys, 501, 504–506, 509, 512–514,
discussion, 753
Black oxide films, 366–371
See also Oxide films
Blister growth
experimental techniques methods, 51–57
Blisters. See Hydride blisters.
Boiling water reactor (BWR)
nodular corrosion of zircaloy-2,
alloying element effects,
347–358, discussion, 744
Zircaloy cladding corrosion, 209–212
Zircaloy nodular corrosion, 291–313 dis-
cussion, 741
Breakaway growth. See Accelerated
growth.
Bristles. See Acicular structures.
Brittle fracture of zircaloy tubing, 521,
524
Burnup
in light water and pressurized reactors,
678
in nuclear power plants, 548–569
C
Calandria tubes, 247, 571
Canadian deuterium uranium pressurized
heavy water (CANDU-PHW)
Bruce nuclear generating station, 21
Pickering nuclear generating station, 21
pressure tubes, 21–34
Zircaloy pressure tubes corrosion and
hydriding, 16
Zr–2.5Nb pressure tubes cold-worked
compared to zircaloy, 21
CANDU-PHW. See Canadian deuterium
uranium pressurized heavy-water
reactors.
Carbon—effect on corrosion of zircaloy-4,
123(fig), 126
Chemical composition of zircalloys
influence on autoclave corrosion, 113–
127, 335–344, discussion, 730, 743
influence on corrosion performance of
fuel cladding, 214(table)
influence on steam corrosion, 128–140,
discussion, 731
relationship to irradiation temperature
and fluence, 667(table)
zirconium-niobium alloys, 479(table)
Chromium
corrosion behavior in zirconium alloys,
203, 228, 335–341(figs, tables),
354–356, 406–412(figs, tables), dis-
cussion, 745, 748
diffusion in alpha-zirconium and zircon-
ium alloys, 436–450, discussion, 751
effects of neutron irradiation, 642, dis-
cussion, 758–759
influence on scale growth, 380, discus-
sion, 746
oxidation in zirconium alloys, 498, 509–
510(fig), 513
CIRENE loop, 166–170(figs, tables),
176(table, fig)
Cladding
burst properties, 549–551, 552–553(tables), discussion, 754
corrosion resistance, 563
in-reactor/out-of-reactor test program, 316–317(tables)
lot-data, Zircaloy-4, 625(table)
measuring zirconium liner thickness, 392–402, discussion, 747
nucler fuel, 549
simulated fuel expansion(SIMFEX) testing, 518–534
tube corrosion—surface treatment comparisons, 331–332
zirconium alloy, 571–577(figs, tables), discussion, 756
Cladding corrosion
behavior, 360, 535
performance rankings of materials, 326–333, discussion, 742
Zircaloy fuel rods, 284
Zircaloy nodular corrosion, 292
Cladding ductility, 562–563
Cladding hydriding corrosion
Zircaloy fuel rods, 267
zirconium alloys, 152, 166, 214, 227 discussion, 739
Cladding material, 678
Cladding tubes—liner design, 392, discussion, 747
CMA. See Computer-aided microanalysis.
CODF. See Crystallite orientation distribution function.
Cold worked stress relieved (CWSR) zircaloy, 576, 585–590, 718
Compression properties, 583
Computer-aided microanalysis, 348(fig), 350–352, discussion, 744
Constitutive equation, 678–691
Coolant radiolysis, 16, 21, 280, 284
Copper compression properties, 583
Core compression rates, 521, 530–531
Corrosion
autoclave corrosion of zircalloys, 113–127, 128, 335–340 discussion, 731, 743
burnup, 231
CANDU-PHW reactors, 20–34, discussion, 727
chemical effects, 113–127, discussion, 730
cladding materials, 231
cladding tubes, 128, discussion, 731
cold-worked Zr–2.5Nb pressure tube effect of thermal ageing, 22(fig)
effect of low hydrogen uptake, 32, 268–269
hydride test materials, 155(table)
irradiated zircaloy fuel rods, 269–275(tables), 280, 292–294
lithium chloride accelerated, 187–201 discussion, 735
N reactor pressure tubes, 3–19 discussion, 725–726
nodular corrosion test, 292–301 (figs, tables)
nondestructive testing of tubes, 40–41 oxidation and hydriding effects, 5–17, 24–31
pressure tubing, 5–6(fig), 20–34, discussion, 727
Zircaloy cladding, 165–184, discussion, 734
Zircaloy-2 in Advanced Test Reactor (ATR), 246–247
zircaloy 4, 118–121(figs), 122(table)
zirconium alloys, 113–127, discussion, 730
Corrosion acceleration
with lithium chloride uptake tests, 187–201, discussion, 735
Corrosion analytical model, 166–170
Corrosion behavior
in steam, 129, 206
in Zircaloy-4 autoclave testing, 139
in zirconium alloys, 228
variables, 382–383(fig)
Corrosion data of Zr-Nb alloys, 231–233
Corrosion fatigue
behavior of zircaloy in iodine, 536–547(figs), discussion, 753
linked to stress corrosion cracking, 545
Corrosion kinetics, 166–172(figs, tables), 178–181(figs)
Corrosion resistant alloys
cladding, 242–245, discussion, 740–741
fuel cladding, 225
hydride cracking, 89, discussion, 729
in pressure tubes, 21–22
in Zircaloy-4, 141–152, 471, discussion, 732
influence of iron + chromium, 381
influence of tin content, 622–617, discussion, 757
scale growth, 379–381
Corrosion testing
beta quenched Zircaloy-4, 454, 462–463, 468(fig), 470–475(figs), 476
cladding alloy, 239–243, (figs, tables), 348
Corrosion testing—Continued
cold-worked Zr–2.5Nb pressure tube, 23(fig)
effects of iron + chromium content, 381
materials in pressurized water and steam, 115, 116–117(tables), 130
nodular corrosion, 292–301
Zircaloy-4 tubing, 135, 151(table)
zirconium alloys, for improved corrosion
resistance, 242–245, discussion, 740–741
zirconium alloys under irradiation, 247

Counting procedure—hydrides, 14
Crack growth rate
Zircaloy corrosion-fatigue, 536–541(figs), 544–545, discussion, 753
Crack initiation
fatigue life affected by iodine, 539–541(figs)
Cracking
oxidized zirconium alloys, 511
SIMFEX testing of zircaloy tubing, 517–518, 521, 525, 528
Cracks and crack velocity, 89–102, discussion, 729
Creep
deformation model, 636(table)
effect of crystal textures, 572, 586–588
influence of tin content in zirconium al-
loys, 622, 628–637(figs, tables), discussion, 757
Zircaloy cladding, 678–679
Creep behavior
Zircaloy cladding, 678–691
zirconium alloys, 574–590
Creep deformation, 597–607(figs), 615–616, 622, 636(table), 683–684, discussion, 757
Creep hardening, 686–690(figs)
Creep relaxation tests, 612–613(figs), 614–615(figs)
Creep testing
material properties, 680(table)
Zircaloy-4 cladding, 625–632(figs, tables)
Critical crack length (CCL), 76–77(figs)
Crystal plasticity models, 577–579, 587–590
Crystal structure, 409(table), 470
See also Acicular structures.
Crystallite behavior, 591
Crystallite orientation distribution function (CODF), 572–574(figs), 578, 584, 587, 589–592
Crystallographic data, ZrSn alloys, 482, 484–485(tables)
Crystallographic texture
Zircaloy-2, 304
zirconium alloys in the nuclear industry, 571–595, 706, discussion, 756, 761
Curie temperatures, 490(table)
CWSR. See Cold worked stress relieved.
CWSR cladding, microstructure, 626
Cyclic loading
creep behavior, 545
crack growth, 545
pellet cladding interaction and corrosion
fatigue, 535

D
Decay curves for zirconium, 252, 254(fig)
Defected fuel rods. See Fuel rods.
Deflection in zircaloy-2 tube, 40
Deformation
and creep—Zircaloy, 574–577, 597
anisotropic, 591, 623
behavior—zircaloy cladding tubes, 596
effects of cyclic loading, 544, 545
model for anisotropic deformation, 623
model for multiaxial creep, 622
model for polycrystalline aggregate, 591–592
temperature of irradiated zircaloy-4, 549, 558(fig), 560–562, 566, discussion, 754
transient deformation effects, 609
zircaloy cladding, 678
Density, dislocation, 669–670, 692–704, discussion, 759
Design
reactor pressure tubes, 35–36
Destructive measurement, 400–401(figs)
Deterioration in pressure tubes, 89, discussion, 729
Deuterium concentration profiles
zircaloy-2 pressure tubes, 41–47(figs)
Deuterium oxide uptake in pressure
tube tubes, 21, 24–31(figs)
Deuterium pickup
pressure tube surveillance in demonstra-
tion reactor, 35–39
Diffraction patterns, ZrNb alloys, 482–485
Diffusion, iron and chromium 432(table)
Dislocation channeling, 561–563
Dislocation density
accelerated growth, 668–671(figs)
effect of microstructures on irradiation, 698
effect of stress relieving pressure tubes, 22
effect of temperature on irradiation growth, 706, discussion, 761
Dislocation loop analysis, 661
Dislocation networks, 460
Dislocations, 658
Ductility of irradiated zircaloy cladding, 549, 562–563, 566, discussion, 754

Dislocation density
accelerated growth, 668–671(figs)
effect of microstructures on irradiation, 698
effect of stress relieving pressure tubes, 22
effect of temperature on irradiation growth, 706, discussion, 761
Dislocation loop analysis, 661
Dislocation networks, 460
Dislocations, 658
Ductility of irradiated zircaloy cladding, 549, 562–563, 566, discussion, 754

Fabrication processing.
See Manufacturing.

Failure
zirconium alloy specimens, 431
Fast neutron flux, 173–175(figs)
Fast neutron irradiation, 246
Fatigue crack growth rate, 544
Fatigue life
Zircaloy corrosion-fatigue behavior, 536, 539–540(fig), 545, discussion, 753
Fatigue tests, 536–547(figs), discussion, 753
Ferromagnetic iron precipitates of zircaloy, 496, discussion, 752

Fitness-for-service
Zircaloy-2 pressure tubes in demonstration reactor, 35–49, discussion, 727–728

Flow stress, transverse
vs temperature, 73(fig)

Fluence
accelerated irradiation growth of zirconium alloys, 658–665,
irradiated Zircaloy fuel rods, 282, 642–657, discussion, 758–759
irradiated Zircaloy-4, 551, 560(fig), 564–565(table), discussion, 754
neutron irradiation zircaloy-4, 646–657(figs, tables)
relation to chemical composition and irradiation temperature in zirconium alloys, 667(table)

Fluting under static loading, 545
Flux, 172–174
Fractography, 539–540, 543, 545
Fracture
hydride blisters, 50–65
irradiated zircaloy, 548–569
test results, 74(table)
testing technique, 53–54
Zircaloy tubing, 518, 520–532(figs, tables)

Fracture toughness
behavior, 81, 83–87, 103
brittle specimens, 86–87
critical crack length (CCL) determination, 76–80(figs)
hydrides, 66–88, 99(fig)
test methodology, 71–73(figs)
vs temperature, 75
Zircaloy pressure tubes, 45–47(figs)
Zr2.5Nb, 66–88, discussion, 729
Fracture toughness tests
methodology, 71–73(figs)

Fabrication histories
material corrosion resistance, 305
Zircaloy irradiated fuel tubes, 292
Fracture toughness vs temperature
zircaloy-2 specimens, 67(fig)
Fuel corrosion properties
irradiated zircaloy fuel rods, 269
Fuel cycle cost reduction, 360
Fuel performance, 678
Fuel rods
cladding alloy, 235, 236–237 (tables, figs),
growth, 643–648(figs, tables), discussion, 758–759
hydriding, external/ternal, 267–269
irradiated zircaloy, 266–288, discussion, 741
lifetime after fuel rod defects effect of heat flux, 282
neutron irradiation, 643–647 (figs, table)
ramp tests, 518
simulated fuel expansion (SIMFEX) testing of zircaloy tubing, 517–534
Fuel sheathing, Zr-Nb alloys, 478–486

G
Granulometry. See Precipitates.
Grain boundary, 692–704, discussion, 759
Grain size, 696(fig), 718–719
Graphite-lined tubing, 524(fig), 528–529
Growth kinetics
intermetallic precipitates, 412, 414–416, 418–419(figs, tables)
Ground claddings. See Claddings.
Growth
hydride blisters, 50–65
strain change, 699–701(figs)
temperature dependence, 659
Growth model, 694–695(tables)

H
Hanford site N reactor, 4
Heat flux, 172, 282, 285
Heat treatment—zirconium alloys
atom probe microanalysis, 426–427(table), 428–430, 432–433, discussion, 749
autoclave corrosion tests, 113–127 discussion, 730
magnetic study, 487–497
manufacturing process corrosion resistance, 141–152, discussion, 732
microstructure and corrosion studies, 202–212, discussion, 736
steam corrosion behavior, 128–140, 347–358(figs), discussion, 731, 744
High-pressure steam testing, 216
Hoop stress, 587(fig), 631(fig)
Hydride blisters, 50–65
Hydride blisters
characteristics, 57–663
characteristic of relation to blister depth, 59
detection technique ultrasonics, 51, 63
experimental techniques, 51–52
fracture testing, 58–59, 63–64
stress analysis, 63
Hydride crack velocity, 92–95, 100
Hydride cracking, 83, 89, 103, discussion, 729
Hydride distribution in pressure vessel tubes, 27, 43(fig)
Hydride morphology
effects on zr2.5Nb fracture toughness, 66–88, discussion, 729
Hydride test materials, 155(table)
Hydrides, 11–14
Hydriding
CANDU-PHW reactor pressure tubes, 20–34, discussion, 727
cladding materials for lightwater reactors, 154
hydrogen steam zircaloy tubing and sphere tests, 275
laboratory (out of reactor) results, 158–161(tables, figs)
N reactor pressure tubes, 5–7(figs), 11–23, 14
Zircaloy fuel rods, 267–275
Hydrogen concentration, 66–88, discussion, 729
Hydrogen distribution, 17
Hydrogen embrittlement of zirconium-niobium alloys, 478
Hydrogen in pressure tubes, 11–13(figs)
Hydrogen in steam
effect on rate of corrosion in zircaloy-2 tubes, 326
Hydrogen isotope concentration in-situ sampling, 41
Hydrogen migration
in irradiated Zircaloy fuel rods, 268–269, 284–285
in pressure tubes, 17
Hydrogen pickup
- irradiated Zircaloy fuel rods, 267, 281
- Zircaloy cladding, 225, 233, 241

Hydrogen solubility, 100

Hydrogen uptake of irradiated zircaloy-4, 549–567(figs, tables), discussion, 754

Hydrogen uptake concentrations, 30–32

Hydrogen utilization, 16–17

Hydrostatic stress, 83

I

Impurities—zirconium alloys, 113–127 discussion, 730

Ingot melting practices, 335 discussion, 743

In-pile corrosion testing
- Zircaloy cladding, 204, 207–210, 216, 222–226(table, figs)
- Zircaloy irradiated fuel rods, 269–276, 282
- Zircaloy-2 performance ranking, 315–333, discussion, 742

In-pile/out-of-pile corrosion data correlation, 332

In-reactor hydriding data base, 154,155(table)

In-reactor irradiation, 166

In-reactor nodular corrosion comparison of behavior with out-of-reactor tests, 309

In-reactor performance anisotropic creep behavior, 587–588

Inspection
- liner thickness measurement, 400(figs)

Intergranular corrosion crack initiation, 539–544(figs)
- stress, 542(fig)

Intermetallic particles autoclave tests, 338, 342
- chemical analysis, 218(fig)
- oxidized zirconium alloys, 501–502 size distributions, 134–135(figs), 221(figs,table)

Intermetallic precipitates
- iron and chromium, 642, 649, discussion, 758–759
- oxidized zirconium alloys, 498–514 Zircaloy cladding, 203, 343, zirconium alloys, 411–419(table, figs)
- Zr-Nb alloys, 478–486

See also Precipitates.

Internal stress
- Zircaloy-2 in superheated steam, 364–365, 370–371

Interstitial flow, 692–704, 717, discussion, 759

Iodine–SIMFEX test chemically embrittling additive, 518–519, 521–523(figs), 525–528(figs)

Iodine induced stress corrosion, 535–547

Iron
corrosion behavior in zirconium alloys, 203, 228, 335–341(figs, tables), 354–357(figs), 406–414(figs, tables), discussion, 743, 748
diffusion in alpha-zirconium and zirconium alloys, 436–450, discussion, 751
effects of neutron irradiation, 642
- in zirconium alloys, 498–502, 504, 509, 512–513, discussion, 753
- influence on scale growth, 380, discussion, 746

Iron precipitates of zircaloy Zr intermetallic precipitates, 483, 486, 496, 649, discussion, 752

Irradiated cladding tubes, 307

Irradiated Zircaloy fuel rods, 268–269

Irradiation
- effects of microstructural factors, 692–704, discussion, 759
- effects on corrosion of zirconium alloys, 245, discussion, 740–741
- fuel rods, 238, 266–269, discussion, 741
- hydriding properties of zirconium alloys, 154–156, 267
- lead test assemblies, 335 discussion, 743
- pressure tubes from CANDU nuclear reactors, 24(table), 20–34, discussion, 727
- temperature effects, 718–720
- temperature relationship to chemical composition and fluence, 667(table)
- test data, 277–279(tables)
- test programs, 235, 268–269
- Zircaloy cladding corrosion, 165–184, 214, discussion, 734

Irradiation growth accelerated—zirconium alloys, 658–677 during neutron irradiation, 667
effects of microstructural behavior, 695, 698
Irradiation growth—Continued
effects of temperature on irradiation
growth of materials, 707–715 (figs, 
tables), discussion, 761
temperature dependence, 660(fig)
zirconium microstructures, 693–
694(fig), 695, 698–703(figs)
Zircaloy-4, 642, 643(table), 644–649
(figs, tables), discussion, 758–759
