F
Field testing (See also In-situ testing; specific tests)
of Iranian soil, 443–444
vane testing, standards, 35–36
Florida, marine environment testing, 140
Friction sleeve resistance, 61, 63
Friction testing, smooth-plate, 145, 148, 151

G
Gas charging, 237–240, 243
Geological Survey, U.S., 130
National Oceanic and Atmospheric Administration (NOAA) ship testing, 455
testing, 202, 203, 218, 220
unpublished study, 210–211
Geotechnical site investigations, 488
philosophy, 510–512
techniques, 490–492
Grain crushing, calcareous sediment, 241–242
Gravity platform foundation stability, 331–334
Gulf of Mexico clay, 363

H
Hurricane Camile, 186–187
Hvorslev strength theory, 432, 434, 438
Hydraulic piston corer, 200

I
Indonesian soil strength testing, 448–452
In-situ shear strength equipment, 18–19
In-situ strength and cone penetration testing, 66–68
In-situ testing, 542–543 (See also Field testing, specific tests)
bridge site, 517–522
description and standardization, 31–36
disturbances caused by, 27–28
equipment, 29–31
Iranian soil, 443
of marine soil strength, 15–19
quality assurance, 24–31
strength degradation in, 31–32
In-situ versus laboratory testing
Arctic marine soils, 512
strength testing, 425, 440
Iranian soil strength testing, 441–448

K
Kringalik Plateau soil testing, 492–499

L
Laboratory testing, 543–545
Iranian soil, 444–446
marine soil strength, 181
Laboratory test values, correcting, 428–438
Laboratory versus in-situ testing
Arctic marine soils, 512
strength testing, 425, 440
Lake deposit, cone penetration testing, 50–51
Limestone, 415
Liquefaction
analyses, 226–228, 230, 461–467
assessment, 467–469
Bering Sea sediment, 454
resistance, 467–469
of silts, 387, 389, 394

Loading
critical level of repeated (CLRL),
229–230
platform geometry and, 331
Louisiana soil, 72

M
Mackenzie Delta, 489
Marchetti dilatometer testing, 146, 150
from barge, 515, 516, 519–522
Marine cores, simulated, 154
Marine environment, shallow borehole
shear testing, 140
Marine geotechnology, 184–185
industry and university research,
185–189
Marine sediments (See also Sands;
Silts)
composition, 13
core splitting, 210–211
gases, 155–156
in-situ testing, 11
poro-elastic properties, 397
properties, 154–155
soft clay, 352
strength testing, 181, 440
three-dimensional stress relaxation
behavior, 294
types, 12–15
Menard pressuremeter testing, 146,
150
from barge, 515, 516, 517–518
Miniature vane testing, 188
Mississippi delta
offshore clay testing, 83
shear modulus of soft marine clay,
352
Mohr-Coulomb failure criteria, 151–
152, 432
Mud vulcanoes, 394
Muds, hard carbonate, 415
Mudslide, 394

N
Naval Civil Engineering Laboratory
(NCEL), U.S.
sampling procedure, 218–220
seafloor testing, 113
Normalized soil parameters (NSP) ap­
proach, 223–226, 228, 230, 242
Norton Sound, AK, testing, 125–126,
130–132
Norwegian Geotechnical Institute,
218, 220–221
Norwegian Petroleum Directorate
(NPD), 331, 333

O
Ocean sediment measurements, 101
Ocean Thermal Energy Conversions
(OTEC), 185
Offshore cone penetration testing, 55
(See also Cone penetration
testing)
Offshore deposit testing, 50
Offshore in-situ strength testing
methods, 20–21
Offshore site investigations, 13
Overconsolidation, 394
stress, 390
Overconsolidation ratio (OCR), 392,
428, 438
marine soil, 15
silts, 59–60

P
Pelagic sediments, 251–256
Penetration resistance and soil
strength, 105
Penetration, testing, standard, 17, 146
Penetrating Testing (ESOPT) Conference, European Symposium on, 41
Penetration Testing in Europe, Subcommittee on Standardization of, 34–35
Permafrost, 488, 490
  warm, 473
Permeabilities, 83
Piezocone penetration testing, 72
Piezometer measurements, 83
Pile installation effects, 258–259
Plasticity, clays, 304, 305
Plate load testing, 17
Platform geometry and loads, 331
Pocket penetrometer testing, 213, 215, 443
Point load index, carbonate rocks, 413
Point load testing, 413, 418–420
Pore-pressure, 89–91
  buildup during cyclic loading, 322–323
  components, 320–321
  cumulative, 331
  dynamic, ratio technique, 497
  equation, 321
  in soft clay, 75–79
  time-dependent dissipation, 92, 94–97
Pore suction effects, 27, 28
Pore-water pressure
  buildup, 392
  negative, 393
  response, 386–389
  transducers, 384
  wave loading and, 397–398
Pore-water salinity, 219
Poro-elastic properties, marine soils, 397
Port Hueneme, CA, testing, 126, 132–133
Pressure release disturbance in simulated marine cores, 154

Pressuremeter and Foundation Engineering, The, 474
Pressuremeter testing, 14
  of permafrost, 474, 476–478
  self-boring, 16, 22–24
Probe deployment system, 19–24
Push sampling, 55, 167, 261
  through drill string, 198–200

R
Ramberg-Osgood-Masing model, 364–365, 369–373, 377
validity, 378
Remote vane shear testing, 491–492, 497, 508–509
Residual pore-pressure technique, 432–435, 438
Resistivity probes, 18
Resonant column testing, 354–355, 370–374
Rock
  Clark and Walker classifications, 414–415
  Middle East types, 414–415
  uniaxial strength, 413
Rod shear testing, 258
Rod-soil rupture, 268–269

S
Sample
  handling, storage and, 200–203
  testing, 203–231 (See also specific tests; Sampling methods)
Sample tube plugging, 166
  partial, 174–176
  quality and, 171–175
Sampling mathematical model, 169–170
Sampling methods
  bottom platform, 193–197
  disturbance, 426
  drive, 261
gravity driven, 189–193
improved, 187
offshore, 167–169
percussion sampling, 166, 167, 186,
197–198
perfect, 426
push sampling, 55, 167, 198–200,
261
rotary drilling, 197–198
Sands (See also Sediments; Silts)
calcareous, 441
cemented beach static behavior, 306
classification, 65–66
frozen, 475, 485–486
undrained behavior, 56, 67
Sandia National Laboratories, U.S.
In Situ Heat Transfer Experiment
(ISHTE), 86–87, 88, 92, 95
Subseabed Disposal Program, 84,
86, 295
San Francisco Bay, penetration testing,
126, 133–134
SEACALF piezocone testing, 29–30
Seafloor
geotechnical properties, 101
jacking system, 56, 57
system, 16, 21–22
in-situ strength testing, 22–23
Sediment strength testing program,
425
Sediments (See also Marine Sedi-
ments; Sands; Silts)
deep ocean, 101, 251
sensitivities, 113
sound velocity, 112–113
testing, sites, 114–120
disturbance/environmental factors,
539–541
northern Bering Sea, liquefaction
of, 454
overconsolidated, 460–461
Self-boring pressuremeter testing,
491–492, 497–501, 506–507
Settlement and consolidation, 390–
392
SHANSEP procedure, 187, 189,
235–236, 432–433, 438
analysis of pelagic clays, 253
Shear modulus for soft marine clays,
352
Shear resistance, ultimate, 304
Shear strength behavior, in multistage
testing, 275–285
Shear strength model, 319–320
Shear strength parameters, 330
effective stress-based, 318
expressions, 43–44
from static cone penetration testing,
41
Shear strength properties, pelagic sedi-
ments, 251
Shear strengths, undrained
at bridge site, 523–527
clays, 354, 355
deep-sea sediment cores, in-situ, 83,
187
Shear stress ratios, reconstituted clays,
271–272
Shear testing

Madison, 406, 408, 410
pleistocene, 58
properties, 58, 385
response to wave loads, 381
sandy, 56
Yukon, 392–393
Simple strength index testing, 203–204, 205
Site evaluation process, 426 (See also
Bridge site investigation; Offshore site investigations)
Soil (See also Clays; Marine sediments; Sands; Sediments; Silts)
brittleness index, 312, 316
crude-grained, 400–402
cone penetration of, 46–47
fine-grained, 402–404
piezocone penetration testing, 72
pore-elastic properties, 397
soft cohesive characteristics, 72–73
Soil classifications, 309–310, 311
Douglas and Olsen classification, 66
Schmertmann classification, 65
Unified, 295
Soil failure, 26, 102
clays, 267–268, 270, 271 (See also
Clays)
Soil Mechanics and Foundation Engineering, International Society
of, 34–35
Soil Mechanics in Offshore Engineering Conference, 185
Soil parameters, variations from triaxial testing, 330–331
Soil property characteristics, 425
Soil-rod friction, 260–261
Soil stage testing, 141, 142
Soil strength determination theory,
102–105
Soil type and stress relaxation, 303–304
Stage testing, 141, 142, 146, 151
Standard penetration testing (SPT),
441
borings, 515, 516, 517
Indonesian soil, 450–451
Iranian soil, 443, 447–448
Static drained testing, 329
Static shear testing, 324
Static undrained testing, 325–326
Storm conditions, 330, 331

Strength degradation, 31–32
Strength measurement
validity of, 231–236
variables, 541–542
Strength parameters testing, 203–204
Strength testing, laboratory versus in situ, 440, 545–546
Stress
applied normal, 152
effects, 302–303, 304
lateral, 527
octahedral shear, 297–298, 299–305
preconsolidation, 531–534
shear, 336
Stress history and normalized soil engineering properties (See
SHANSEP procedure)
Stress relaxation behavior, three-dimensional, 294
Sunshine Skyway Bridge, 515, 522
replacement, 141, 146–150, 152
Tampa Bay, borehole shear testing, 144, 146–148
Tension by platforms, foundations of, 336
Testing, integrated, 363
Torvane testing, 213, 214–215, 443
Triaxial compression testing
STRENGTH TESTING ON MARINE SEDIMENTS

UC, 444–46, 448
UU, 451–452

Triaxial shear testing; drained, 311, 315
Triaxial testing, 18
  consolidated undrained (CU), 27, 201, 216, 220, 222, 495, 499, 510
  correcting results, 432
cyclic, 318, 458–460
deep-sea sediment, 188
  in-situ UU, 19
  multistage, 274
    Konder’s technique, 277, 281, 283, 285, 286, 289
    rational procedure, 277, 286–289
  of permafrost, 478–484
  of soft marine clay, 355–356
  static, 216–226, 318
  stress-based shear strength, 318
types, 322–325
  unconfined compression, 201, 222, 225
  unconsolidated undrained, 27, 201, 222, 225, 494–495, 499, 510
  undrained, 146
  undrained compression, 275, 279, 286, 289

  variations in soil parameters from, 330–331

V

Vane shear probe measurements, 92
Vane shear testing, 14, 441, 443, 451
  (See also Miniature vane testing; Remote vane shear testing; Torvane testing)
Vibratory samplers, 196–197

W

Wave action and sediment densification, 507
Wave loading, 220, 230, 330, 455, 461
  liquefaction and, 469, 470
  silts response to, 381
  soil deformation and, 387–398
Wave tank, 382, 383
Wave tank testing, 385, 386–392, 394
Wave-soil interaction, 386–387
Wireline driven (percussion) sampling, 166, 167, 198

Y

Yield behavior, clay, 499–505
