Foreword

The Symposium on Electron Microfractography was presented during the Seventy-first Annual Meeting of the Society, in San Francisco, Calif., 23-28 June 1968. The symposium was sponsored by Subcommittee II on Fractography of ASTM Committee E-24 on Fracture Testing of Metals. The chairman of this symposium was A. J. Brothers, General Electric Co.

Contents

Introduction	1
Relationship Between Precipitation and Dimple Fracture in an 18 Percent Nickel Maraging Steel— <i>L. Roesch and G. Henry</i>	3
Discussion	30
Fractographic Studies on the Cleavage Fracture of Single Crystals of Iron— <i>K. Kitajima and K. Futagami</i>	33
Fractographic Studies of Crack-Tip Zones in a Structural Steel— <i>D. M. Fegredo</i>	60
Correlations Between Fractographic Features and Plane-Strain Fracture Toughness in an Ultrahigh-Strength Steel— <i>W. A. Spitzig</i>	90
A Comparison of Elevated Temperature Tensile Fractures in Nonleaded and Leded 4145 Steel— <i>R. D. Zipp, W. R. Warke, and N. N. Breyer</i>	111
Use of Electron Microfractography in Interpreting the Mechanisms of Fatigue Crack Propagation— <i>K. D. Nair and I. Le May</i>	134
Fracture Surface and Processes in Polycarbonate— <i>G. H. Jacoby</i>	147
A Fractographic Study of Precipitation Hardened and Dispersion Strengthened Magnesium-Base Alloys— <i>C. D. Calhoun and N. S. Stoloff</i>	173
Discussion	191
Correlation of Fractographic Features With Fracture Mechanics Data— <i>R. C. Bates, W. G. Clark, Jr., and D. M. Moon</i>	192
The Influence of Microstructure on the Fracture Topography of Titanium Alloys— <i>J. C. Williams, R. R. Boyer, and M. J. Blackburn</i>	215
