Foreword

The papers in the symposium on Analysis of the Test Methods for High Modulus Fibers and Composites were presented at a meeting held in San Antonio, Tex., 12-13 April 1972. The symposium was sponsored by The American Society for Testing and Materials through its Committee D-30 on High Modulus Fibers and Their Composites. J. M. Whitney, Air Force Materials Laboratory, Wright-Patterson Air Force Base, presided as symposium chairman. Carl Zweben, Materials Science Corporation, and R. J. Diefendorf, Rensselaer Polytechnic Institute, presided as symposium vice-chairmen for Composites and Fibers, respectively.

Introduction

Reliability and Fracture

Characterization of Composites for the Purpose of Reliability Evaluation – <i>J. C. Halpin, K. L. Jerina, and T. A. Johnson</i>	5
Models for Laminate Failure	9
Experimental Reliability	17
Engineering Consequences of Statistics	31
Reliability and Safety of Composite Structures	39
Reliability Through Proof Testing	48
Summary	53
Fracture Mechanics and Composite Materials: A Critical Analysis – <i>Carl Zweben</i>	65
Philosophies of Composite Fracture Mechanics	68
Comparison with Experimental Data	84
Summary and Conclusions	95
Fracture Mechanics for Fibrous Composites – <i>G. C. Sih, P. D. Hilton, R. Badaliance, P. S. Shenberger, and G. Villarreal</i>	98
Interaction of Cracks with Fibers	100
Experimental Results on Fiber-Reinforced Composites	118
Conclusions	131
Method for Estimating Fracture Strength of Specially Orthotropic Composite Laminates – <i>H. J. Konish, Jr., T. A. Cruse, and J. L. Swedlow</i>	133
Stress Analysis Near the Crack Tip	134
Analytical Failure Criteria	136
Examples of Fracture Strength Predictions	138
Conclusions	141
Deformation and Failure of Boron-Epoxy Plate with Circular Hole – <i>I. M. Daniel, R. E. Rowlands, and J. B. Whiteside</i>	143
Anisotropic Stress Analysis	144
Finite-Element Analysis	146
Experimental Procedure	147
Stress and Strain Distributions	149
Failure	159
Summary and Conclusions	162

Composite Materials Characterization

Free-Edge Effects in the Characterization of Composite Materials – J. M. Whitney	167
Axial Tension	168
Rail Shear Test	174
Sandwich Beam Test	176
Conclusions	179
Effects of Specimen Geometry on the Strength of Composite Materials – B. E. Kaminski	181
Data Base	181
Test Method Comparisons	182
Effect of Temperature	185
Laminate Comparison	189
Conclusions	191
Compressive Strength and Failure Modes of Unidirectional Composites – L. B. Greszczuk	192
Theories for Microbuckling of Unidirectional Composites	194
Experimental Studies on Compression Failure of Unidirectional Composite Models	201
Properties of Constituents and Preparation of Test Specimens	202
Failure Modes for Ductile, Isotropic Fiber-Reinforced Composites	204
Failure Modes for Brittle, Anisotropic, Fiber-Reinforced Composites	208
Compressive Strength of Unidirectional Composites	210
Conclusions	215
Influence of the Free Edge upon the Strength of Angle-Ply Laminates – R. B. Pipes, B. E. Kaminski, and N. J. Pagano	218
Experimental Observations	219
Influence of Interlaminar Shear Stress	220
Conclusions	226
Data Averaging of Anisotropic Composite Material Constants – E. M. Wu, K. L. Jerina, and R. E. Lavengood	229
Tensorial Nature of Composite Material Parameters	230
Summary and Conclusions	250
Tubular Specimens in Composite Characterization	
Pure Bending of Helical Wound Composite Cylinders – N. J. Pagano	255
Analysis	256
Results	260
Prediction and Control of Macroscopic Fabrication Stresses in Hoop Wound, Fiberglass Rings – R. C. Reuter, Jr.	264
Analysis	266
Numerical Results	272
Experiments and Experimental Results	274
Conclusions	276

Some Important Aspects in Testing High-Modulus Fiber Composite Tubes in Axial Tension – T. L. Sullivan and C. C. Chamis	277
Experimental Apparatus and Procedure	278
Results and Discussion	282
Summary of Results	291
Post-Yielding Behavior of Torsionally Loaded Composite Tubes – R. B. Lantz and R. L. Foye	293
Test Data Source	294
Analytical Methods	295
Correlation Curves	298
User Requirements	299
Conclusions and Summary	299
Nondestructive Characterization of Composites	
Ultrasonic Procedures for Inspecting Composite Tubes – J. L. Rose, J. M. Carson, and D. J. Leidel	311
Ultrasonic Spectroscopy Theory	314
Ultrasonic Spectroscopy Testing Procedure and Results	317
Concluding Remarks	322
Determination of the Mechanical Properties of Fiber Composites by Ultrasonic Techniques – G. D. Dean and F. J. Lockett	326
Determination of the Elastic Stiffnesses of a Transversely Isotropic Material	328
Material Characterization	340
Viscoelastic Material Properties	343
Fiber Characterization	
Influence of Fiber Property Variation on Composite Failure Mechanisms – J. V. Mullin	349
Energy Release at Fiber Fracture	350
Energy Absorption Mechanisms	352
Failure Mechanisms for Single Fibers and Tows	354
Conclusions	363
Graphite Fiber Tensile Property Evaluation – P. E. McMahon	367
Single Filament Testing	368
Dry Bundle Testing	373
Impregnated Strand Modulus Measurement	385
Comparison of Tensile Evaluation Methods	387
Conclusions	387
High-Strength Filaments for Cables and Lines – E. Scala	390
Statistics of Bundle Theory and Fiber Failure	391
Filament Mechanical Properties	394
Glass Filaments	394
Carbon Fiber Properties	396
Organic Type Fibers-PRD-49	398
Application for High-Modulus Guys	402
Cable Design and Fabrication	405
