# Foreword

The technology of high performance fiber composites has been with us for only one decade. Although fiberglass has been available for many years, the discovery of boron fiber in the early 1960's, followed quickly by graphite and other fibers, ushered in a new era of structural composites which included the rediscovery of fiberglass for critical, highly loaded structures.

At the present time there are several hundred advanced composite structures which are flying, and the technology which was developed primarily for aerospace is being quickly adapted to commercial applications, including machinery, sporting equipment, and storage tanks, among others.

The rapid developments in composite technology, which occurred primarily in the 1960's in the aerospace field, are chronicled in this book. Because this field is advancing rapidly, the material in this book is not completely up-to-date; however, it is still remarkably valid in providing a review of the fundamental technological base in this field.

# Contents

Chapter I Commercial Aircraft—R. R. JUNE AND J. R. LAGER	1
Chapter II Military Aircraft—L. E. HACKMAN	43
Chapter III VTOL Aircraft—M. J. SALKIND	76
Chapter IV Helicopter Rotor Blades—R. L. PINCKNEY	108
Chapter V Space Structures—J. D. FOREST AND J. L. CHRISTIAN	134
Chapter VI Fabrication Processing—S. YURENKA ELLIOTT	163
Index	187
