NOTE
The Society is not responsible, as a body, for the statements and opinions advanced in this publication.
Foreword

This publication is a collection of papers presented at a technical symposium on R-curves held during the regular Committee E-24 meetings in the Fall of 1971. It represents an early effort by a Subcommittee 1 task group to organize the present state of R-curve technology in preparation for a renewed attempt to apply the method to plane-stress fracture toughness evaluation. The symposium was sponsored by Committee E-24 on Fracture Testing of Metals, American Society for Testing and Materials. D. E. McCabe, Armco Steel Corp., presided as symposium chairman.

Contents

Introduction 1

Crack Growth Resistance Curves (R-Curves)—Literature Review—R. H. Heyer 3
Development of Crack Growth Resistance 3
Major Developments 4
Experimental Determinations 6
Applications of R-Curves 12
Summary 15

R-Curve Determination Using a Crack-Line-Wedge-Loaded (CLWL) Specimen—D. E. McCabe and R. H. Heyer 17
Development of Method 18
Instrumentation 24
Fixturing 25
Present Procedures 26
Specimen Dependence of R-Curves 30
Recent Applications 32
Strain Measurements of CLWL Specimens 34
Summary 34

Specimen Development 38
Specimen Characteristics 40
Typical Data 43
Conclusions 45

Fracture Extension Resistance (R-Curve) Characteristics for Three High-Strength Steels—R. W. Judy, Jr., and R. J. Goode 48
R-Curve Factors 49
