NOTE

The Society is not responsible, as a body, for the statements and opinions advanced in this publication.
Foreword

The Fourth Conference on Composite Materials: Testing and Design was held 3-4 May 1976 at Valley Forge, Pa. The American Society for Testing and Materials' Committee D-30 on High Modulus Fibers and Their Composites sponsored the conference. J. G. Davis, Jr., National Aeronautics and Space Administration-Langley Research Center, served as conference chairman. Most of the papers presented at the eight sessions are included in this volume which complements the first, second, and third conference publications—ASTM STP 460, ASTM STP 497, and ASTM STP 546, Composite Materials: Testing and Design.
Related
ASTM Publications

Composite Reliability, STP 580 (1975), $49.75 (04-580000-33)

Fracture Mechanics of Composites, STP 593 (1976), $23.50 (04-593000-33)

Environmental Effects on Advanced Composite Materials, STP 602 (1976), $10.00 (04-602000-33)
A Note of Appreciation to Reviewers

This publication is made possible by the authors and, also, the unheralded efforts of the reviewers. This body of technical experts whose dedication, sacrifice of time and effort, and collective wisdom in reviewing the papers must be acknowledged. The quality level of ASTM publications is in a direct function of their respected opinions. On behalf of ASTM we acknowledge their contribution with appreciation.

Contents

Introduction 1

Fracture and Fatigue

Fracture Resistance Characterization of Graphite/Epoxy Composites—
D. H. Morris and H. T. Hahn 5
Experimental Program 6
Results 7
Conclusions 15

An Experimental Study of the Fracture Behavior of Laminated
Graphite/Epoxy Composites—H. F. Brinson and Y. T. Yeow 18
Materials and Test Procedures 22
Experimental Results 22
Discussion 34

Effect of Time at Load on Fatigue Response of [(0/±45/90)_T300/5208 Graphite-Epoxy Laminate—G. P. Sendekyj and
H. D. Stalnaker 39
Experimental Results 40
Analysis of Test Results 46
Conclusions 51

Preliminary Development of a Fundamental Analysis Model for
Crack Growth in a Fiber Reinforced Composite Material—
M. F. Kanninen, E. F. Rybicki, and W. I. Griffith 53
Analysis Procedure 54
Example Computational Results and Discussion 62

Fatigue of Notched Fiber Composite Laminates: Analytical and
Experimental Evaluation—S. V. Kulkarni, P. V. McLaughlin,
Jr., R. B. Pipes, and B. W. Rosen 70
Static Failure Model 72
Fatigue Analysis 75
Experimental Program 78
Analysis/Experiment Correlation Study 84
Concluding Remarks 91
Delamination in Quasi-Isotropic Graphite-Epoxy Laminates—
K. L. REIFSNIDER, E. G. HENNEKE II, AND W. W. STINCHCOMB 93
Experimental Program 94
Results 96
Discussion and Conclusions 103

Structural Design Significance of Tension-Tension Fatigue Data on Composites—G. C. GRIMES 106
Graphite/Epoxy Fatigue 107
Hybrid Composites 113
Structural Design Significance 116
Conclusions 119

MATERIALS AND PROCESSING

Evaluation of Selected High-Temperature Thermoplastic Polymers for Advanced Composite and Adhesive Applications—
M. G. MAXIMOVICH 123
Resin Selection and Characterization 124
Graphite/300P Development 125
Graphite/PPQ 401 Development 128
Graphite Scrim/PPQ Adhesive Bonds 132
Discussion 134
Conclusions 135

Development of Multidirectional Fiber-Reinforced Plastics—
Y. SUEZAWA, M. TAKEMOTO, AND S. TAKAHASHI 137
Fabrication Method of Multidirectional Glass-Fiber Reinforced Plastics (M-D GFRP) 137
Mechanical Properties of M-D GFRP 139
Fracture Mode of M-D GFRP 143
Improvement of the Strength of M-D GFRP 144
Conclusions 150

TEST METHODS

Specimen Design and Fabrication 155
Experimental Facilities and Procedures 156
Mechanical Property Results 157
Composite Results 159
Acoustic Emission Response 160
Analysis and Conclusions 163
