NOTE
The Society is not responsible, as a body, for the statements and opinions advanced in this publication.
Foreword

ASTM plays a major role in the technology of zirconium and hafnium, not only in its traditional role of developing materials and test standards, but also in the publication of technical information of which this manual is an example.

Zirconium and hafnium standards and technology are under the jurisdiction of ASTM Committee B-10 on Reactive and Refractory Metals and Alloys which is comprised of the following four subcommittees.

- Subcommittee B10.01 on Titanium
- Subcommittee B10.02 on Zirconium and Hafnium
- Subcommittee B10.03 on Niobium and Tantalum
- Subcommittee B10.04 on Molybdenum and Tungsten

ASTM Committee B-10 sponsors a series of international conferences on zirconium in the nuclear industry. Papers presented at conferences held in 1968, 1973, and 1976 have been published as ASTM Special Technical Publications.

The work of the committee proceeds under the ASTM principle of consensus and balance so that actions generally are approved by nearly unanimous vote of the blend of producers, users, and general interest groups who are members of the committee.

It is the objective of this committee and all of ASTM Committees to promote the effective use of the materials under its jurisdiction through the development of meaningful standards and the encouragement of the exchange of technical information.

We invite anyone who can benefit from a contribution to this work to join in the activities of ASTM.

Contents

Preface 1

Chapter 1—General Information 3
   Historical Background 3
   Physical Properties 4
   Common Terminology 5
   Specifications 6
   Availability of Forms 10
   Safe Handling and Shipping 11

Chapter 2—Applications 20
   Nuclear Applications 20
   Chemical Process Applications 33

Chapter 3—Fabrication 42
   Sheet Bending 42
   Tube Bending 42
   Die Forming (Drawing) 43
   Punching 43
   Machining 44
   Grinding 47
   Welding 49
   Cleaning and Descaling 54

Chapter 4—Production Techniques 56
   Metal Production 56
   Refining 59
   Melting 59
   Manufacture of Wrought Forms 60
   Casting 62

Chapter 5—Metallurgy 64
   Allotropic Transformation 64
   Cold Work and Recrystallization 65
   Anisotropy and Preferred Orientation 67
   Oxygen 69
   Microstructure 71
   Hafnium 71

Chapter 6—Testing 75
   Chemical Composition 75
   Tension Testing 76
