Foreword

This publication on Part-Through Crack Fatigue Life Prediction contains papers presented at a symposium held 13-14 Oct. 1977 at San Diego, Calif. The symposium was sponsored by the American Society for Testing and Materials through its Committee E-24 on Fracture Testing. J. B. Chang, Rockwell International Military Aircraft Division, served as symposium chairman and editor of this publication. Those who served as session chairmen were J. P. Gallagher, University of Dayton Research Institute; G. A. Vroman, Rockwell International/Rocketdyne; and C. M. Hudson, NASA/Langley Research Center.

A Note of Appreciation
to Reviewers

This publication is made possible by the authors and, also, the unheralded efforts of the reviewers. This body of technical experts whose dedication, sacrifice of time and effort, and collective wisdom in reviewing the papers must be acknowledged. The quality level of ASTM publications is a direct function of their respected opinions. On behalf of ASTM we acknowledge with appreciation their contribution.

Contents

Introduction 1

A Review and Assessment of the Stress-Intensity Factors for Surface Cracks—J. C. NEWMAN, JR. 16

Development of Basic Material(s) Data for Evaluating Crack Growth Life—R. J. BUCCI 47

Aspect Ratio Variability in Part-Through Crack Life Analysis—R. M. ENGLE, JR. 74

Life Prediction Analysis of Part-Through Cracks—G. A. VROMAN 89

Part-Through Crack Growth Predictions Using Compact Tension Crack Growth Rate Data—J. L. RUDD 96

NASA-Langley Research Center’s Participation in a Round-Robin Comparison Between Some Current Crack-Propagation Prediction Methods—C. M. HUDSON AND P. E. LEWIS 113

Prediction of Constant Amplitude Fatigue Crack Propagation in Surface Flaws—W. S. JOHNSON 143

Assessment of the Sensitivity of Crack Growth Rate Constants to Predictive Accuracy of Part-Through Crack Fatigue Life Predictions—J. B. CHANG 156

Part-Through Crack Problems in Aircraft Structures—J. L. RUDD, T. M. HSU, AND H. A. WOOD 168
