Foreword

The symposium on Effect of Load Spectrum Variables on Fatigue Crack Initiation and Propagation was presented at San Francisco, Calif., 21 May 1979. The symposium was sponsored by the American Society for Testing and Materials through its Committee E-9 on Fatigue. D. F. Bryan, The Boeing Wichita Co., and J. M. Potter, Air Force Flight Dynamics Laboratory, presided as symposium chairmen and editors of this publication.

A Note of Appreciation
to Reviewers

This publication is made possible by the authors and, also, the unheralded efforts of the reviewers. This body of technical experts whose dedication, sacrifice of time and effort, and collective wisdom in reviewing the papers must be acknowledged. The quality level of ASTM publications is a direct function of their respected opinions. On behalf of ASTM we acknowledge with appreciation their contribution.
