

Cement, Concrete, and Aggregates

Index to Volume 1

1979

A-C

Acceptability: Precision statements without an interlaboratory test program (Arni), No. 2, 88

Accuracy

Discussion of "The Analysis of Interlaboratory Test Data" by Mandel (Smith), No. 2, 75

Judging the precision and reliability of standard test methods (Popovics), No. 1, 38

The analysis of interlaboratory test data (Mandel), No. 2, 71

Admixtures: Establishing specification limits for materials (Philleo), No. 2, 83

Air entrainment: The precision of the microscopical determination of the air-void system in hardened concrete (Sommer), No. 2, 49

Analysis of variance: Judging the precision and reliability of standard test methods (Popovics), No. 1, 38

Arni, H. T.: Precision statements without an interlaboratory test program, No. 2, 88

Bandyopadhyay, A. K.: *see* Swamy, R. N., Bandyopadhyay, A. K., and Stavrides, H.

Barnes, B. D., Diamond, S., and Dolch, W. L.: Scanning electron microscope characterization of the surfaces of ASTM C 109 standard Ottawa sand grains, No. 1, 21

Bridge decks: Low-void concrete mixtures (Rahal and Havens), No. 1, 25

Cement additives: Aspects of sulfate attack on concrete (de Sousa Coutinho), No. 1, 10

Chung, H. W.: Effect of length/diameter ratio on compressive strength of drilled concrete core—a semi-rational approach, No. 2, 68

Compression tests: Effect of length/diameter ratio on compressive strength of drilled concrete core—a semi-rational approach (Chung), No. 2, 68

Compressive strength: Use of superplasticizers as water reducers (Ghosh and Malhotra), No. 2, 56

Concrete durability: The ring method of measuring restrained shrinkage in mortar and concrete (Swamy, Bandyopadhyay, and Stavrides), No. 1, 13

Conductivity: The electrical resistivity of concrete with emphasis on the use of electrical resistance for measuring moisture content (Woelfl and Lauer), No. 1, 64

Corrosion resistance: Low-void concrete mixtures (Rahal and Havens), No. 1, 25

D-K

Data processing

Discussion of "The Analysis of Interlaboratory Test Data" by Mandel (Smith), No. 2, 75

The analysis of interlaboratory test data (Mandel), No. 2, 71

de Sousa Coutinho, A.: Aspects of sulfate attack on concrete, No. 1, 10

Diamond, S.: *see* Barnes, B. D., Diamond, S., and Dolch, W. L.

Dolch, W. L.: *see* Barnes, B. D., Diamond, S., and Dolch, W. L.

Drill core analysis: Effect of length/diameter ratio on compressive strength of drilled concrete core—a semi-rational approach (Chung), No. 2, 68

Electrical resistivity: The electrical resistivity of concrete with emphasis on the use of electrical resistance for measuring moisture content (Woelfl and Lauer), No. 2, 64

Electron microscopy: Scanning electron microscope characterization of the surfaces of ASTM C 109 standard Ottawa sand grains (Barnes, Diamond, and Dolch), No. 1, 21

Fineness: Establishing specification limits for materials (Philleo), No. 2, 83

Fluorescence: Methods and equipment used in preparing and examining fluorescent ultrathin sections of portland cement concrete (Walker and Marshall), No. 1, 3

Freeze thaw durability: Use of superplasticizers as water reducers (Ghosh and Malhotra), No. 2, 56

Ghosh, R. S. and Malhotra, V. M.: Use of superplasticizers as water reducers, No. 2, 56

Grinding: The precision of the microscopical determination of the air-void system in hardened concrete (Sommer), No. 2, 49

Havens, J. H.: *see* Rahal, A. S. and Havens, J. H.

Heat of hydration: Establishing specification limits for materials (Philleo), No. 2, 83

L-Q

Lauer, K.: *see* Woelfl, G. A. and Lauer, K.

Malhotra, V. M.: *see* Ghosh, R. S. and Malhotra, V. M.

Mandel, J.: Analysis of interlaboratory test data, No. 2, 71

Marshall, B. F.: *see* Walker, H. N. and Marshall, B. F.

Measurement: Ruggedness evaluation of test procedures (Wernimont), No. 2, 78

Microscopy: The precision of the microscopical determination of the air-void system in hardened concrete (Sommer), No. 2, 49

Microstructure: Methods and equipment used in preparing and examining fluorescent ultrathin sections of portland cement concrete (Walker and Marshall), No. 1, 3

Moisture content: The electrical resistivity of concrete with emphasis on the use of electrical resistance for measuring moisture content (Woelfl and Lauer), No. 2, 64

Mortars (material): The ring method of measuring restrained shrinkage in mortar and concrete (Swamy, Bandyopadhyay, and Stavrides), No. 1, 13

Petrography: Methods and equipment used in preparing and examining fluorescent ultrathin sections of portland cement concrete (Walker and Marshall), No. 1, 3

Philleo, R. E.: Establishing specification limits for materials, No. 2, 83

Popovics, S.: Judging the precision and reliability of standard test methods, No. 1, 38

Portland cements: Aspects of sulfate attack on concrete (de Sousa Coutinho), No. 1, 10

Precision

Discussion of "The Analysis of Interlaboratory Test Data" by Mandel (Smith), No. 2, 75

Judging the precision and reliability of standard test methods (Popovics), No. 1, 38

Precision statements without an interlaboratory test program (Arni), No. 2, 88

The analysis of interlaboratory test data (Mandel), No. 2, 71

Quality control: Precision statements without an interlaboratory test program (Arni), No. 2, 88

R-Z

Rahal, A. S. and Havens, J. H.: Low-void concrete mixtures, No. 1, 25

Restraining: Effect of length/diameter ratio on compressive strength of drilled concrete core—semi-rational approach (Chung), No. 2, 68
