Composites Technology Review is a publication sponsored by The Metal Properties Council, printed and distributed by the American Society for Testing and Materials, and supported by the Society for the Plastics Industry. Technical support is provided by the Lawrence Livermore Laboratory, University of California. To receive a copy of the *Review* on a regular basis, please complete the notice printed in this issue and mail it to ASTM Headquarters, Circulation Department, 1916 Race Street, Philadelphia, PA 19103.

COVER. Boron/titanium metal matrix composite stringers made by Grumman Aerospace Corp. to improve the thermal and structural performance of the airframes used in advanced aircraft and missile systems. For more information, see the Research Briefs section.

INFORMATION FOR CONTRIBUTORS

The purpose of *Composites Technology Review* is the rapid collection and dissemination of new, important information in all areas of composites technology. Emphasis is placed on composites technology that bridges the gap between the R&D community and industry. Newsworthiness to a substantial part of the technical community is another key criterion that will be used to determine the acceptability of contributions. Articles that have been published or submitted for publication elsewhere or papers of an advertising or promotional nature cannot be printed in the *Review*. Submit manuscripts to T. T. Chiao, *Editor, Composites Technology Review*, Lawrence Livermore Laboratory, P.O. Box 808, L-338, Livermore, CA 94550 (415-422-9271).

Manuscript Preparation: Complete instructions are available from the *Editor*. Manuscripts should be typed in black on one side of white bond paper of letter size (22 by 28 cm). All material, including references, figure captions, and tables, should be double spaced. Equations should be typed, not handwritten, whenever possible. Three copies of the manuscript, including references, figure captions, and tables, are required. One set of original figures suitable for reproduction is required.

Figures may be reduced to single column width (7.8 cm); lettering and numbers should be appropriately large (≥ 2 mm). Handwritten lettering is *not* acceptable in illustrations. *Photographs* should be black and white continuous tone (glossy) prints of good quality; instant Polaroid type prints are *not* recommended. *Tables* should be placed on separate sheets, each with its own title. *References* and *footnotes* must be typed on a separate sheet. It is preferred that references to journal articles contain full titles of the articles cited.

Manuscript Deadline: The *Review* is issued quarterly (January, April, July, and October); all contributions for one issue must be received by the *Editor* during the previous quarter (e.g., received in October, published in January).

MOVING? INTERESTED?

To receive *Composites Technology Review* on a regular basis or to ensure uninterrupted delivery if you are moving, please complete the following and mail the entire notice to: ASTM Headquarters, Circulation Department, 1916 Race Street, Philadelphia, PA 19103

New address ☐

Composites Technology Review is printed quarterly and distributed free of charge by the American Society for Testing and Materials to scientists and engineers interested in the development of composites technology. Because all costs of publication are borne by the several sponsoring organizations, we ask that you notify us at the above address if you do *not* wish to continue receiving the *Review*.
