and opinions advanced in this publication.

FOREWORD

The papers and discussions in this Symposium on Basic Mechanisms of Fatigue were presented at the second session of the Sixty-first Annual Meeting of the Society held in Boston, Mass., on June 23, 1958. The symposium was sponsored by ASTM Committee E-9 on Fatigue with T. J. Dolan of the University of Illinois serving as symposium chairman and also presiding over the session.

CONTENTS

	PAGE
Introduction—T. J. Dolan	1
Progress Report on Dislocation Behavior in Lithium Fluoride Crystals During Cyclic Loading—R. E. Keith and J. J. Gilman	3
Discussion	19
Fatigue Crack Formation in Silver Chloride—P. J. E. Forsyth	21
Internal Friction, Plastic Strain, and Fatigue in Metals and Semiconductors—Warren P. Mason	36
Discussion	51
Slipband Formation and Fatigue Cracks Under Alternating Stress—M. R. Hempel ..	52
Discussion	82
Cycle-Dependent Stress Relaxation—JoDean Morrow and G. M. Sinclair	83
Discussion	104
Recent Observations on Fatigue Failure in Metals—W. A. Wood	110
Discussion	120

THIS PUBLICATION is one of many issued by the American Society for Testing Materials in connection with its work of promoting knowledge of the properties of materials and developing standard specifications and tests for materials. Much of the data result from the voluntary contributions of many of the country's leading technical authorities from industry, scientific agencies, and government.

Over the years the Society has published many technical symposiums, reports, and special books. These may consist of a series of technical papers, reports by the ASTM technical committees, or compilations of data developed in special Society groups with many organizations cooperating. A list of ASTM publications and information on the work of the Society will be furnished on request.
