Index

A

Air contamination, 8
Air temperature, 8
Aluminum, 7, 9, 62
  atmospheric corrosivity evaluation, 56
  correlation and regression, 61
  corrosion losses of, 29–33, 38–40
  corrosivity classification, 52–53
  flat panels, corrosion losses of, 29–30
  helices, corrosion losses of, 31–32
  observed vs. predicted values for, 63
  predicted loss vs. measured loss, 64
American National Standards Institute (ANSI), 66
Argentina
  atmospheric corrosion test sites, 3
  Exposure Program initiation dates, 8
  organizations participating in ISOCORRAG Program, 5
ASTM G01, 2, 6
ASTM G50, 2
ASTM G91, 2
ASTM G140, 2
Atmospheric corrosion
  rates, 57–59
  test sites, 3–4
Atmospheric corrosivity, classification of, 1, 66
Average values, of metal corrosion, 60

B

B (time exponent), 63
BRANZ (Building Research Association of New Zealand Building Science Group), 6
British Steel Corporation, 2
British Steel Swinden Laboratories, 6
Building Research Association of New Zealand Building Science Group (BRANZ), 6
Bundesanstalt fur Strassenwesen, 5

C

Canada
  atmospheric corrosion test sites, 3
  Exposure Program initiation dates, 8
  organizations participating in ISOCORRAG Program, 5
Carbon steel
  atmospheric corrosivity evaluation, 56
  correlation and regression, 61
  corrosive rates, 65
  observed vs. predicted values for, 63
  residual and standard error of prediction for, 62
  unalloyed, 7
Category derivation, 59–62
Central Electricity Research Laboratories, 6
Centre Technique du Zinc, 5
Centro National de Investigaciones Metalurgicas, 6
Chemical cleaning solutions, 9
CITEFA (Instituto de Investigaciones Cientificas y Tecnicas de las Fuerzas Armadas), 5
Cl deposition, 63
Contamination, 8
Copper, 7, 9
  atmospheric corrosivity evaluation, 56
  correlation and regression, 61
  corrosion losses of, 25–29, 37–38
  corrosive rates, 65
  corrosivity classification, 50–51
  flat panels, corrosion losses of, 25–26
  helices, corrosion losses of, 26–27
  observed vs. predicted values, 63
  predicted loss vs. measured loss, 64
  residual and standard error of prediction for, 62
Correlation, 61
Corrosion losses
  aluminum, 29–33, 38–40
  copper, 25–29, 37–38
  flat panels, test sites categories, 42–44
  helices, test sites categories, 44–45
  steel, 15–20, 34–35
  zinc, 20–24, 35–37
Corrosion rates, 2, 65
  atmospheric, 57–59
  environmental effects of 1 year, 59
Corrosivity categories
  derivation, 59–62
  for metals in ISOCORRAG Program, 54–55
Corrosivity classification, 40–56
Czechoslovakia
  atmospheric corrosion test sites, 3
  Exposure Program initiation dates, 8
  organizations participating in ISOCORRAG Program, 5

D

Data analysis, 15–40
Database characteristics, 57
Department of Materials Science VHE 602, University of Southern California, 6
Dose-response functions for normative corrosivity category derivation, 59–62

E

Environmental categories, 58
Environmental data, 10–15
Environmental effects of 1 year corrosion rates, 59
Environmental monitoring, 2
Escuela Tecnica Superior de Ingenieros Industriales Departemento Ingeniera Quimica, 6
Exposure, 2, 15, 63
Exposure Program initiation dates, 8

F

Federal Republic of Germany (FRG)
  atmospheric corrosion test sites, 3
  Exposure Program initiation dates, 8
