## PREFACE

The preparation of this bibliography was undertaken by Subcommittee III on Thermostat Metals of ASTM Committee B-4 on Metallic Materials for Thermostats and for Electrical Resistance, Heating, and Contacts as part of its work in developing standard methods of test and specifications for thermostat metals. It was anticipated that the bibliography would provide a convenient means of finding sources of information needed for the development of test methods and specifications.

<sup>1</sup>This complete bibliography provides for the producers and users a convenient access to all the available literature on all phases of production, design and use of thermostat metals.

It is the hope and wish of Subcommittee III that this bibliography will be a help to all those interested in the subject of thermostat metals.

It is naturally hoped and expected that anyone finding corrections for or additions to this bibliography will refer them to the American Society for Testing and Materials, 1916 Race Street, Philadelphia 3, Pennsylvania.

Unto Savolainen<sup>2</sup>  
Chairman, Subcommittee III  
Committee B-4

<sup>1</sup>The original issue of this bibliography, Special Technical Publication No. 288, covered the period 1806-1959, and this first supplement covers the period 1960-1961.

---
